| <b>Chief Coordinator</b> | Mr. Shiva Prasad U, Assistant Professor.                                       |                  |                |                   |                |
| <b>Course Faculty</b>    | Dr. Govardhan D, Professor and Head<br>Mr. Shiva Prasad U, Assistant Professor |                  |                |                   |                |

#### I. COURSE OVERVIEW:

The aim of this course is to introduce basic principles of fluid dynamics and it is further extended to cover the application of aeronautical engineering. This course also deals with the large variety of fluids such as air, water, steam, etc; however, the major emphasis is given for the study of water. Topics covered in the course include pressure, hydrostatics, and buoyancy; open systems and control volume analysis; mass conservation and momentum conservation for moving fluids; viscous fluid flows, flow through pipes; dimensional analysis; boundary layers, and lift and drag on objects. Students will work to formulate the models necessary to study, analyze, and design fluid systems through the application of these concepts, and to develop the problem-solving skills essential to good engineering practice of fluid mechanics in practical applications.

#### II. COURSE PRE-REQUISITES:

| Level | Course Code | Semester | Prerequisites                             | Credits |
|-------|-------------|----------|---|---------|
| UG    | AHS002      | I        | Linear Algebra and Differential Equations | 4       |
| UG    | AME002      | II       | Engineering Mechanics                     | 4       |

### III. MARKSDISTRIBUTION:

| Subject        | SEE Examination | CIA Examination | Total Marks |
|----------------|-----------------|-----------------|-------------|
| Fluid Dynamics | 70 Marks        | 30 Marks        | 100         |

### IV. DELIVERY / INSTRUCTIONAL METHODOLOGIES:

|   |                        |   |          |   |              |   |        |
|---|------------------------|---|----------|---|--------------|---|--------|
| ✗ | Chalk & Talk           | ✓ | Quiz     | ✓ | Assignments  | ✗ | MOOCs  |
| ✓ | LCD / PPT              | ✓ | Seminars | ✗ | Mini Project | ✓ | Videos |
| ✗ | Open Ended Experiments |   |          |   |              |   |        |

### V. EVALUATION METHODOLOGY:

The course will be evaluated for a total of 100 marks, with 30 marks for Continuous Internal Assessment (CIA) and 70 marks for Semester End Examination (SEE). Out of 30 marks allotted for CIA during the semester, marks are awarded by taking average of two CIA examinations or the marks scored in the make-up examination.

#### Semester End Examination (SEE):

The SEE is conducted for 70 marks of 3 hours duration. The syllabus for the theory courses is divided into five modules and each module carries equal weightage in terms of marks distribution. The question paper pattern is as follows. Two full questions with “either” or “choice” will be drawn from each module. Each question carries 14 marks. There could be a maximum of two sub divisions in a question.

The emphasis on the questions is broadly based on the following criteria:

|      |  |
|------|--|
| 50 % | To test the objectiveness of the concept.  |
| 50 % | To test the analytical skill of the concept OR to test the application skill of the concept. |

#### Continuous Internal Assessment (CIA):

CIA is conducted for a total of 30 marks (Table 1), with 20 marks for Continuous Internal Examination (CIE), 05 marks for Quiz and 05 marks for Alternative Assessment Tool (AAT).

Table 1: Assessment pattern for CIA

| Component | Theory   |      |     | Total Marks |
|-----------|----------|------|-----|-------------|
|           | CIE Exam | Quiz | AAT |             |
| CIA Marks | 20       | 05   | 05  | 30          |

### Continuous Internal Examination (CIE):

Two CIE exams shall be conducted at the end of the 8<sup>th</sup> and 16<sup>th</sup> week of the semester respectively. The CIE exam is conducted for 20 marks of 2 hours duration consisting of five descriptive type questions out of which four questions have to be answered where, each question carries 5 marks. Marks are awarded by taking average of marks scored in two CIE exams.

### Quiz - Online Examination

Two Quiz exams shall be online examination consisting of 25 multiple choice questions and are to be answered by choosing the correct answer from a given set of choices (commonly four). Such a question paper shall be useful in testing of knowledge, skills, application, analysis, evaluation and understanding of the students. Marks shall be awarded considering the average of two quiz examinations for every course.

### Alternative Assessment Tool (AAT)

This AAT enables faculty to design own assessment patterns during the CIA. The AAT converts the classroom into an effective learning centre. The AAT may include tutorial hours/classes, seminars, assignments, term paper, open ended experiments, METE (Modeling and Experimental Tools in Engineering), five minutes video, MOOCs etc.

## VI. HOW PROGRAM OUTCOMES ARE ASSESSED:

| Program Outcomes (POs) |  | Strength | Proficiency assessed by             |
|------------------------|--|----------|-------------------------------------|
| PO 1                   | <b>Engineering knowledge:</b> Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.  | 3        | Presentation on real-world problems |
| PO 2                   | <b>Problem analysis:</b> Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences  | 2        | Assignments                         |
| PO 3                   | <b>Design/development of solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. | 2        | Assignments                         |
| PO 4                   | <b>Conduct investigations of complex problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.  | --       | --                                  |

**3 = High; 2 = Medium; 1 = Low**

## VII. HOW PROGRAM SPECIFIC OUTCOMES ARE ASSESSED:

| Program Specific Outcomes (PSOs) |   | Strength | Proficiency assessed by |
|----------------------------------|---|----------|-------------------------|
| PSO1                             | <b>Professional skills:</b> Able to utilize the knowledge of aeronautical/aerospace engineering in innovative, dynamic and challenging environment for design and development of new products | 1        | Seminar                 |

| Program Specific Outcomes (PSOs) |  | Strength | Proficiency assessed by |
|----------------------------------|--|----------|-------------------------|
| PSO2                             | <b>Problem-solving Skills:</b> Imparted through simulation language skills and general purpose CAE packages to solve practical, design and analysis problems of components to complete the challenge of airworthiness for flight vehicles. | -        | -                       |
| PSO3                             | <b>Practical implementation and testing skills:</b> Providing different types of in house and training and industry practice to fabricate and test and develop the products with more innovative technologies                              | -        | -                       |
| PSO 4                            | <b>Successful career and entrepreneurship:</b> To prepare the students with broad aerospace knowledge to design and develop systems and subsystems of aerospace and allied systems and become technocrats.                                 | -        | -                       |

**3 = High; 2 = Medium; 1 = Low**

### VIII. COURSE OBJECTIVES :

| The course should enable the students to: |  |
|---|--|
| I   | Illustrate about the basic properties of a fluid, hydrostatic forces on submerged bodies and different manometers. |
| II  | Derive the basic principles of a fluid-continuity, momentum, Euler and Bernoulli's equations.                      |
| III                                       | Explain the concept of boundary layer theory and importance of Prandtl's boundary layer theory.                    |
| IV  | Understand the flow behavior through different fluid pumps, fans and turbine systems.                              |

### IX. COURSE OUTCOMES (COs):

| COs  | Course Outcome   | CLOs  | Course Learning Outcome  |
|------|--|-------|--|
| CO 1 | Understand the basic fluid properties and fluid dynamic concepts with its applications of fluid statics to determine forces of buoyancy and stability; and to fluids in rigid-body motion. | CLO 1 | Define the properties of fluids and its characteristics, which will be used in aerodynamics, gas dynamics, marine engineering etc.     |
|      |  | CLO 2 | Explain the hydrostatic forces on submerged bodies, variation with temperature and height with respect to different types of surfaces. |
|      |  | CLO 3 | Define different types of manometers and explain buoyancy force, stability of floating bodies by determining its metacentre height.    |
| CO 2 | Use of conservation laws in differential forms and Understand the dimensional methods and kinematics of fluid particles.   | CLO 4 | Dimensional similarity and prediction of flow behaviour using dimensionless numbers.   |
|      |  | CLO 5 | Classification of fluid flows and governing equations of inviscid fluid flows.   |
|      |  | CLO 6 | Conceptual analysis of fluid flow and exact solutions of Navier Stokes equations for Couette flow and Poiseuille flow.                 |
| CO 3 | Use Euler's and Bernoulli's equations and the conservation of mass to determine velocities, pressures, and accelerations for incompressible and inviscid fluids.                           | CLO 7 | Define Fluid forces and describe the motion of a fluid particle with fluid deformation.  |
|      |  | CLO 8 | Determine the Euler's and Bernoulli's equation and obtain its phenomenological basis of Navier-Stokes equation.                        |
|      |  | CLO 9 | Describe about the flow measurements using different equipment's of fluid flows.   |

| COs  | Course Outcome   | CLOs   | Course Learning Outcome  |
|------|--|--------|--|
| CO 4 | Understand the concepts of viscous boundary layers, mechanics of viscous flow effects on immersed bodies and its forces.   | CLO 10 | Understand the Concept of boundary layer flows and control of flow separation.   |
|      |  | CLO 11 | Determine the flows over streamlined and bluff bodies to predict the drag and lift forces.                                     |
|      |  | CLO 12 | Understand the thickness factor with respect to Displacement, momentum and energy thickness.                                   |
| CO 5 | Apply principles of fluid mechanics to the operation, design, and selection of fluid machinery and to understand the ethical issues associated with decision making. | CLO 13 | Explain about the turbo machinery systems and working.   |
|      |  | CLO 14 | Describe the concepts of turbo machinery in the field of aerospace engineering and concepts of internal flows through engines. |
|      |  | CLO 15 | Demonstrate the knowledge gained from the working of compressors, fans and pumps.  |

#### X. COURSE LEARNING OUTCOMES (CLOs):

| CLO Code  | CLO's  | At the end of the course, the student will have the ability to:  | PO's Mapped  | Strength of Mapping |
|-----------|--------|--|--------------|---------------------|
| AAEB03.01 | CLO 1  | Define the properties of fluids and its characteristics, which will be used in aerodynamics, gas dynamics, marine engineering etc.     | PO 1         | 3                   |
| AAEB03.02 | CLO 2  | Explain the hydrostatic forces on submerged bodies, variation with temperature and height with respect to different types of surfaces. | PO 1         | 3                   |
| AAEB03.03 | CLO 3  | Define different types of manometers and explain buoyancy force, stability of floating bodies by determining its metacentre height.    | PO 1         | 3                   |
| AAEB03.04 | CLO 4  | Dimensional similarity and prediction of flow behaviour using dimensionless numbers.   | PO 2         | 2                   |
| AAEB03.05 | CLO 5  | Classification of fluid flows and governing equations of inviscid fluid flows.   | PO 3<br>PO 4 | 2                   |
| AAEB03.06 | CLO 6  | Conceptual analysis of fluid flow and exact solutions of navier stokes equations for coquette flow and poiseuille flow.                | PO 2         | 1                   |
| AAEB03.07 | CLO 7  | Define Fluid forces and describe the motion of a fluid particle with fluid deformation.  | PO 2         | 2                   |
| AAEB03.08 | CLO 8  | Determine the Euler's and Bernoulli's equation and obtain its phenomenological basis of Naviers-stokes equation.                       | PO 3<br>PO 4 | 2                   |
| AAEB03.09 | CLO 9  | Describe about the flow measurements using different equipment's of fluid flows.   | PO 3         | 2                   |
| AAEB03.10 | CLO 10 | Understand the Concept of boundary layer flows and control of flow separation.   | PO 2         | 2                   |
| AAEB03.11 | CLO 11 | Determine the flows over streamlined and bluff bodies to predict the drag and lift forces.   | PO 1         | 3                   |
| AAEB03.12 | CLO 12 | Understand the thickness factor with respect to Displacement, momentum and energy thickness.   | PO 1         | 3                   |
| AAEB03.13 | CLO 13 | Explain about the turbo machinery systems and working.   | PO 3         | 3                   |
| AAEB03.14 | CLO 14 | Describe the concepts of turbo machinery in the field of aerospace engineering and concepts of internal flows through engines.         | PO 4         | 3                   |
| AAEB03.15 | CLO 15 | Demonstrate the knowledge gained from the working of compressors, fans and pumps   | PO 4         | 3                   |

**3 = High; 2 = Medium; 1 = Low**

**XI. MAPPING COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES**

| Course Outcomes (COs) | Program Outcomes (POs) |      |      |      | Program Specific Outcomes (PSO) |
|-----------------------|------------------------|------|------|------|---------------------------------|
|                       | PO 1                   | PO 2 | PO 3 | PO 4 | PSO 1                           |
| CO 1                  | 3                      |      |      |      | 1                               |
| CO 2                  |                        | 2    | 1    | 2    | 1                               |
| CO 3                  |                        | 2    | 2    | 2    | 1                               |
| CO 4                  | 3                      | 2    |      |      | 1                               |
| CO 5                  |                        |      | 3    | 3    | 1                               |

**3 = High; 2 = Medium; 1 = Low**

**XII. MAPPING COURSE LEARNING OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:**

| Course Learning Outcomes (CLOs) | Program Outcomes (POs) |     |     |     |     |     |     |     |     |      |      |      | Program Specific Outcomes (PSOs) |      |      |      |
|---------------------------------|------------------------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|----------------------------------|------|------|------|
|                                 | PO1                    | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1                             | PSO2 | PSO3 | PSO4 |
| CLO 1                           | 3                      |     |     |     |     |     |     |     |     |      |      |      | 1                                |      |      |      |
| CLO 2                           | 3                      |     |     |     |     |     |     |     |     |      |      |      | 1                                |      |      |      |
| CLO 3                           | 3                      |     |     |     |     |     |     |     |     |      |      |      | 1                                |      |      |      |
| CLO 4                           |                        | 2   |     |     |     |     |     |     |     |      |      |      |                                  |      |      |      |
| CLO 5                           |                        |     | 2   | 2   |     |     |     |     |     |      |      |      | 1                                |      |      |      |
| CLO 6                           |                        | 1   |     |     |     |     |     |     |     |      |      |      |                                  |      |      |      |
| CLO 7                           |                        | 2   |     |     |     |     |     |     |     |      |      |      |                                  |      |      |      |
| CLO 8                           |                        |     | 2   | 2   |     |     |     |     |     |      |      |      | 1                                |      |      |      |

|---|--|---|---------------------------|
| ✓ | Early Semester Feedback                | ✓ | End Semester OBE Feedback |
| ✗ | Assessment of Mini Projects by Experts |   |                           |

### XV. SYLLABUS

|  |  |
|--|--|
| <b>MODULE-I</b>  | <b>FLUID PROPERTIES AND FLUID STATICS</b>                          |
| Density, specific weight, specific gravity, surface tension and capillarity, Newton's law of viscosity, incompressible and compressible fluid, numerical problems; Hydrostatic forces on submerged bodies - Pressure at a point, Pascal's law, pressure variation with temperature and height, center of pressure plane, vertical and inclined surfaces; Manometers - simple and differential Manometers, inverted manometers, micro manometers, pressure gauges and numerical problems. Buoyancy - Archimedes principle, metacenter, Meta centric height calculations; Stability. |  |
| <b>MODULE-II</b>   | <b>FLUID KINEMATICS AND BASIC EQUATIONS OF FLUID FLOW ANALYSIS</b> |
| Statement of Buckingham's $\pi$ - theorem, similarity parameters - Reynolds number, Froude number, concepts of geometric, kinematic and dynamic similarity, Reynolds number as a very approximate measure of ratio of inertia force and viscous force. Types of fluid flows, differential equations of mass and momentum for incompressible flows, inviscid Euler's equation and viscous flows- Navier Stokes equations, concept of fluid rotation, vorticity and streamfunction, exact solutions of Navier Stokes equations for Couette flow and Poiseuille flow, numericals.     |  |
| <b>MODULE-III</b>  | <b>FLUID DYNAMICS</b>  |
| Fluid forces and Motion of a fluid particle; Fluid deformation; Euler's and Bernoulli's equation, phenomenological basis of Navier- Stokes equation, flow measurements : pressure, velocity and mass flow rate, viscosity, pitot-static tube, venturi meter, orifice meter and V-Notch, numericals.  |  |
| <b>MODULE-IV</b>   | <b>BOUNDARY LAYER THEORY</b>                                       |
| Concept and assumptions, qualitative idea of boundary layer and separation, streamlined and bluff bodies, drag and lift forces. Displacement, momentum and energy thickness, numericals.   |  |
| <b>MODULE-V</b>  | <b>TURBO MACHINERY</b>   |
| Introduction and classification of fluid machines: Turbo machinery analysis; The angular momentum principle; Euler turbo machine equation; Application to fluid systems, working principle overview of turbines, fans, pumps and compressors.  |  |

## XVI. COURSE PLAN:

The course plan is meant as a guideline. Probably there may be changes.

| Lecture No | Topics to be covered  | Course Learning Outcomes (CLOs) | Reference           |
|------------|---|---------------------------------|---------------------|
| 1          | Density, Specific weight, Specific gravity.   | CLO 1                           | T2 : 1.2            |
| 2          | Surface tension and capillarity   | CLO 1                           | T2 : 1.6            |
| 3          | Newton's law of viscosity   | CLO 1                           | T2 : 1.3            |
| 4          | Incompressible and compressible fluid, numerical problems.  | CLO 1                           | T2 : 1.3            |
| 5-6        | Hydrostatic forces on submerged bodies: Pressure at a point   | CLO 2                           | T2 : 3.1            |
| 7-8        | Pascal's law, pressure variation with temperature and height  | CLO 2                           | T2 : 3.1            |
| 9-10       | Center of pressure plane, vertical and inclined surfaces.   | CLO 2                           | T2 : 3.2            |
| 11-12      | Manometers: simple and differential Manometers  | CLO 3                           | T2 : 2.5            |
| 13         | Inverted manometers, micro manometers   | CLO 3                           | T2 : 2.5            |
| 14-15      | Pressure gauges and numerical problems.   | CLO 3                           | T2 : 2.5            |
| 16         | Buoyancy : Archimedes principle   |                                 | T2 : 2.5            |
| 17-18      | Metacenter, meta centric height calculations.   | CLO 3                           | T2 : 4.4            |
| 19         | Statement of Buckingham's $\pi$ - theorem, similarity parameters - Reynolds number, Froude number   | CLO 4                           | T3 : 5.0            |
| 20-21      | Concepts of geometric, kinematic and dynamic similarity, Reynolds number as a very approximate measure of ratio of inertia force and viscous force. | CLO 4                           | T2 : 5.3<br>R4: 6.6 |
| 22         | Types of fluid flows, differential equations of mass and momentum for incompressible flows  | CLO 5                           | T1 : 5.1            |
| 23-24      | Inviscid Euler's equation and viscous flows- Navier Stokes equations  | CLO 6                           | T1 : 5.2            |
| 25-26      | Concept of fluid rotation, vorticity and streamfunction, Stream line, path line, streak line, stream surface, stream tube.                          | CLO 6                           | T2 : 5.3            |
| 27-28      | Exact solutions of Navier Stokes equations for Couette flow and Poiseuille flow, numerical.   | CLO 6                           | T2 : 5.5<br>R3: 8.5 |
| 29         | Equations for Couette flow and Poiseuille flow, numerical.  | CLO 6                           | T2 : 5.6            |
| 30         | Fluid forces and Motion of a fluid particle; Fluid deformation  | CLO 7                           | T2 : 5.9            |
| 31         | Euler's and Bernoulli's equation  | CLO 8                           | T2 : 6.8            |
| 32         | Phenomenological basis of Navier-Stokes equation  | CLO 8                           | T2 : 5.9            |
| 33-34      | flow measurements: pressure, velocity and mass flow rate, viscosity, Pitot-static tube, Venturi meter,  | CLO 9                           | T2 : 5.6<br>R1: 7.7 |
| 35         | Orifice meter and V-Notch, Numericals.  | CLO 9                           | T2 : 6.8            |
| 36         | Concept and assumptions of boundary layer, qualitative idea of boundary layer and separation  | CLO 10                          | T2 : 6.8, R2: 4.5   |
| 37         | Streamlined and bluff bodies, drag and lift forces.   | CLO 11                          | T2 : 6.3            |
| 38-39      | Displacement, momentum and energy thickness, numericals.  | CLO 12                          | T2 : 6.4            |
| 40         | Introduction and classification of fluid machines   | CLO 13                          | T3 : 10.1           |
| 41         | Turbo machinery analysis  | CLO 14                          | T3 : 10.3           |
| 42         | The angular momentum principle  | CLO 13                          | T3 : 10.5           |

| Lecture No | Topics to be covered                         | Course Learning Outcomes (CLOs) | Reference |
|------------|--|---------------------------------|-----------|
| 43         | Euler turbo machine equation                 | CLO 14                          | T3 : 10.4 |
| 44-45      | Application to fluid systems                 | CLO 15                          | T3: 10.6  |
| 46-47      | Working principle overview of turbines, fans | CLO 14                          | T3 : 10.8 |
| 48         | Pumps and compressors                        | CLO 15                          | T3 : 10.3 |

**XVII. GAPS IN THE SYLLABUS - TO MEET INDUSTRY / PROFESSION REQUIREMENTS:**

| S No | Description                            | Proposed actions | Relevance with POs | Relevance with PSOs |
|------|--|------------------|--------------------|---------------------|
| 1    | Experimental determination of buoyancy | Seminars         | PO 1, PO 2, PO 5   | PSO 2               |
| 2    | Introduction to viscous fluid flows    | Seminars / NPTEL | PO 1, PO 2, PO 5   | PSO 3               |
| 3    | Determination of Velocity triangles    | NPTEL            | PO 2, PO 3, PO 4   | PSO 3               |

**Prepared by:**

Mr. Shiva Prasad U, Assistant Professor  
Dr. Govardhan D, Professor and Head

**HOD, AE**
