## I. COURSEOVERVIEW:

The course matter is divided into five modules covering duly-recognized areas of theory and study. This course develops abstract and critical reasoning by studying mathematical and logical proofs andassumptions as applied in basic physics and to make connections between physics and other branches of sciences and technology. The topics covered include waves, non-dispersive transverse and longitudinal waves, light and optics, wave optics, lasers, introduction to quantum mechanics, solution of wave equation and introduction to solids and semiconductors. The course helps students to gain knowledge of basic principles and appreciate the diverse applications in technological fields in respectivebranches.

## II. COURSE PRE-REQUISITES:

| Level | Course Code | Semester | Prerequisites |
| :---: | :---: | :---: | :---: |
| - | - | - | Basic principles of light waves |

III. MARKSDISTRIBUTION:

| Subject | SEE Examination | CIAExamination | Total Marks |
| :---: | :---: | :---: | :---: |
| Waves and Optics | 70 Marks | 30 Marks | 100 |

IV. DELIVERY / INSTRUCTIONAL METHODOLOGIES:

| $\boldsymbol{x}$ | Chalk \& Talk | $\boldsymbol{\imath}$ | Quiz | $\boldsymbol{\nu}$ | Assignments | $\boldsymbol{x}$ | MOOCs |
| :---: | :--- | :---: | :--- | :--- | :--- | :--- | :--- |
| $\boldsymbol{\checkmark}$ | LCD / PPT | $\boldsymbol{\imath}$ | Seminars | $\boldsymbol{x}$ | Mini Project | $\boldsymbol{\iota}$ | Videos |
| $\boldsymbol{x}$ | Open Ended Experiments |  |  |  |  |  |  |

## V. EVALUATION METHODOLOGY:

The course will be evaluated for a total of 100 marks, with 30 marks for Continuous Internal Assessment (CIA) and 70 marks for Semester End Examination (SEE). Out of 30 marks allotted for CIA during the semester, marks are awarded by taking average of two CIA examinations or the marks scored in the make-up examination.

Semester End Examination (SEE): The SEE is conducted for 70 marks of 3 hours duration. The syllabus for the theory courses is divided into five modules and each module carries equal weightage in terms of marks distribution. The question paper pattern is as follows. Two full questions with "either" or "choice" will be drawn from each module. Each question carries 14 marks. There could be a maximum of two sub divisions in a question.

The emphasis on the questions is broadly based on the following criteria:

| $50 \%$ | To test the objectiveness of the concept. |
| :---: | :--- |
| $50 \%$ | To test the analytical skill of the concept OR to test the application skill of the concept. |

## Continuous Internal Assessment (CIA):

CIA is conducted for a total of 30 marks (Table 1), with 20 marks for Continuous Internal Examination (CIE), 05 marks for Quiz and 05 marks for Alternative Assessment Tool (AAT).

Table 1: Assessment pattern for CIA

| Component | Theory |  |  | Total Marks |
| :---: | :---: | :---: | :---: | :---: |
| Type of Assessment | CIE Exam | Quiz | AAT |  |
| CIA Marks | 20 | 05 | 05 | 30 |

## Continuous Internal Examination (CIE):

Two CIE exams shall be conducted at the end of the $8^{\text {th }}$ and $16^{\text {th }}$ week of the semester respectively. The CIE exam is conducted for 20 marks of 2 hours duration consisting of five descriptive type questions out of which four questions have to be answered where, each question carries 5 marks. Marks are awarded by taking average of marks scored in two CIE exams.

## Quiz - Online Examination

Two Quiz exams shall be online examination consisting of 25 multiple choice questions and are to be answered by choosing the correct answer from a given set of choices (commonly four). Such a question paper shall be useful in testing of knowledge, skills, application, analysis, evaluation and understanding of the students. Marks shall be awarded considering the average of two quiz examinations for every course.

## Alternative Assessment Tool (AAT)

This AAT enables faculty to design own assessment patterns during the CIA. The AAT converts the classroom into an effective learning centre. The AAT may include tutorial hours/classes, seminars, assignments, term paper, open ended experiments, METE (Modeling and Experimental Tools in Engineering), five minutes video, MOOCs etc.

## VI. HOW PROGRAM OUTCOMES AREASSESSED:

| Program Outcomes (POs) | Strength | Proficiency assessed by |  |
| :---: | :--- | :---: | :---: |
| PO 1 | Engineering knowledge: Apply the knowledge of <br> mathematics, science, engineering fundamentals, <br> and an engineering specialization to the solution of <br> complexengineering problems. | 3 | Presentation on real- <br> world problems |
| PO 2 | Problem analysis: Identify, formulate, review research <br> literature, and analyze complex engineering problems <br> reaching substantiated conclusions using first principles of <br> mathematics, natural sciences, and engineering sciences. | 2 | Term paper |
| PO 4 | Conduct investigations of complex problems: Use <br> research- based knowledge and research methods including <br> design of experiments, analysis and interpretation of data, <br> and synthesisof the information to provide valid <br> conclusions. | 1 | Seminar |

3= High; 2 = Medium; 1 = Low

## V11. HOW PROGRAM SPECIFIC OUTCOMES AREASSESSED:

| Program Specific Outcomes (PSOs) | Strength | Proficiency assessed by |  |
| :--- | :--- | :---: | :---: |
| PSO 1 | Professional skills: Able to utilize the knowledge of <br> aeronautical/aerospace engineering in innovative, dynamic <br> and challenging environment for design and development <br> ofnew products. | - | - |
| PSO 2 | Professional skills: Imparted through simulation language skills <br> and general purpose CAE packages to solve practical, design and <br> analysis problems of components to complete the challenge of <br> airworthiness for flight vehicles. | - | - |

## V111. COURSE OBJECTIVES:

| The course should enable the students to: |  |
| :---: | :--- |
| I | Enrich knowledge in principles of quantum mechanics and semiconductors. |
| II | Correlate principles and applications of lasers and fiber optics. |
| III | Meliorate the knowledge of light and optics and also their applications. |
| IV | Develop strong fundamentals of transverse, longitudinal waves and harmonic waves. |

## IX. COURSE OUTCOMES (COs):

| COs | Course Outcome | CLOs | Course Learning Outcome |
| :---: | :---: | :---: | :---: |
| CO 1 | Student solves the timeindependent Schrodinger equation as an intermediate step to solve the time-dependent Schrodinger equation and Student applies boundary conditions to constraint the set of possible states. | CLO 1 | Recall the basic principles of physics and apply these concepts of physics in solving thereal-time problems. |
|  |  | CLO 2 | Acquire knowledge about fundamental in quantum mechanics. |
|  |  | CLO 3 | Interpretation of dual nature of matter wave concept using Davisson \& Germer'sexperiment |
| CO 2 | Understand the motion of electrons in microscopic level and knowledge on semiconductors and its applications. | CLO 4 | Estimate the energy of the particles using <br> Schrödinger's wave equation and apply it to particle in potential box. |
|  |  | CLO 5 | Recollect the conductivity mechanism involved in semiconductors and calculate carrier concentrations. |
|  |  | CLO 6 | Understand the band structure of a solid and Classify materials as metals, insulators, or semiconductors, and sketch a schematic band diagram for each one. |
| CO 3 | Production of laser and their applications <br> Student will understand | CLO 7 | Understand the basic principles involved in the production of Laser light and also real-time applications of lasers. |

## XV.SYLLABUS

\section*{| Module-I | QUANTUM MECHANICS |
| :--- | :--- |}

Introduction to quantum physics, Black body radiation, Planck's law, Photoelectric effect, Compton effect, DeBroglie's hypothesis, Wave-particle duality, Davisson and Germer experiment, Time-independent Schrodinger equation for wave function, Born interpretation of the wave function, Schrodinger equation for one dimensional problems-particle in a box.

| Module-III | INTRODUCTION TO SOLIIDS AND SEMICONDUCTORS |
| :--- | :--- |

Bloch's theorem for particles in a periodic potential, Kronig-Penney model (Qualitative treatment), Origin of energy bands. Types of electronic materials: metals, semiconductors, and insulators. Intrinsic and extrinsic semiconductors, Carrier concentration, Dependence of Fermi level on carrier-concentration and temperature, Carrier generation and recombination, Hall effect.

## Module-IIII $\quad$ LASERS AND FIBER OPTICS

Characteristics of lasers, Spontaneous and stimulated emission of radiation, Metastable state, Population inversion, Lasing action, Ruby laser, He-Ne laser and applications of lasers.

Principle and construction of an optical fiber, Acceptance angle, Numerical aperture, Types of optical fibers (Single mode, multimode, step index, graded index), Attenuation in optical fibers, Optical fiber communication system with block diagram.

## Module-IV

LIGHT AND OPTICS
Huygens' principle, Superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer.
Fraunhofer diffraction from a single slit, circular aperture and diffraction grating.

## Module-V $\quad$ HARMONIC OSCILLLATIONS AND WAVES IN ONE DIMENSION

Mechanical and electrical simple harmonic oscillators, Damped harmonic oscillator, Forced mechanical and electrical oscillators, Impedance, Steady state motion of forced damped harmonic oscillator.

Transverse wave on a string, the wave equation on a string, Harmonic waves, Reflection and transmission of waves at a boundary, Longitudinal waves and the wave equation for them, acoustics waves.
