

## DEFINITIONS AND TERMINOLOGYQUESTION BANK

| $\begin{array}{\|c} \hline \mathbf{S} \\ \text { No } \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| UNIT - I |  |  |  |  |  |
| 1 | What is a function? | Let $S$ be a non empty subset of $C$ then $f$ maps $S$ tends $C$ is said to be a function if every element of $S$ associates with an element of C | Jnderstand | CLO1 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 1 \\ \hline \end{gathered}$ |
| 2 | What is a complex number? | The number which can be written as $\mathrm{z}=\mathrm{x}+\mathrm{iy}$ is called a complex number. | Inderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 3 | Identify Modulus of a complex number | If $\mathrm{z}=\mathrm{a}+\mathrm{ib}$, then its modulus is $\|z\|=\sqrt{a^{2}+b^{2}}$ | nderstand | CLO1 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 4 | Describe Argument of complex number | argument of a complex number $\mathrm{z}=\mathrm{a}+\mathrm{ib}=\mathrm{r}(\cos \theta+\sin \theta)$ is the value of $\theta$ satisfying $\mathrm{r} \cos \theta=\mathrm{a}$ and $\mathrm{r} \sin \theta=\mathrm{b}$. Thus the argument of $\mathrm{z}=\theta, \boldsymbol{\pi}-\theta,-\boldsymbol{\pi}+\theta,-\theta, \theta=\tan ^{-1}\|\mathrm{a} / \mathrm{b}\|$, according as $\mathrm{z}=\mathrm{a}+\mathrm{ib}$ lies in I, II, III or $\mathrm{IV}^{\mathrm{th}}$ quadrant. | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 4 | Define Limit? | A function $\mathrm{w}=\mathrm{f}(\mathrm{z})$ is said to have a limit at $\mathrm{w}_{0}$ as z approchhes to $\mathrm{z}_{\mathrm{o}}$ when $\in>0$ in domain then $\mathrm{f}(\mathrm{z})$ approaches to $\mathrm{w}_{0}$ when $\delta>0$ in codomain when ever modulus of $\mathrm{z}-\mathrm{z}_{0}$ less than $\in$ then modulus of $\mathrm{f}(\mathrm{z})-\mathrm{w}_{0}$ less than $\delta$ <br> We shall use the notation $w_{0}=\lim _{z \rightarrow z_{0}} f(z)$. | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 5 | Define the continuity of the function | A function is said to be continuity at a point if limit of the function exit and the limit value is equals to functional value | Remember | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 6 | Explain Differentation of complex function. | Let $\mathrm{w}=\mathrm{f}(\mathrm{z})$ be a given function defined for all z in a neighbourhood of $\mathrm{z}_{0}$.If $\lim _{\Delta z \rightarrow 0} \frac{f\left(z_{0}+\Delta z\right)-f\left(z_{0}\right)}{\Delta z}$ exists, the function $\mathrm{f}(\mathrm{z})$ is said to be derivable at $\mathrm{z}_{0}$ and the limit is denoted by $f^{\prime}\left(z_{0}\right) \cdot f^{\prime}\left(z_{0}\right)$ if exists is called the derivative of $f(z)$ at $z_{0}$. | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 7 | Explain the properties of limit. | $z$ tends to then it is unique If the limit of a function $f(z)$ exists as | Jnderstand | CLO1 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 8 | $\begin{aligned} & \hline \text { Define } \\ & \text { Analytic } \\ & \text { function. } \\ & \hline \end{aligned}$ | A complex function is said to be analytic on a region R if it is complex differentiable at every point in R . | Remember | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |

| $\begin{array}{\|c} \mathbf{S} \\ \text { No } \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 9 | Define Singularities | A complex function may fail to be analytic at one or more points through the presence of singularities. | Remember | CLO2 | $\begin{gathered} \text { CAHS004.0 } \\ 2 \end{gathered}$ |
| 10 | Explain the term Entire function. | A complex function that is analytic at all finite points of the complex plane is said to be entire function. | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 12 | Define complex potential function. | Let $w=\emptyset(x, y)+i \varphi(x, y)$ if this function is analytic then it's called complex potential function. | Jnderstand | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 13 | Define harmonic function. | Analytic functions are intimately related to harmonic functions. We say that a real-valued function $h(x, y)$ on the plane is harmonic if it obeys Laplace's equation: $\frac{\partial^{2} h}{\partial^{2} x}+\frac{\partial^{2} h}{\partial^{2} y}=0$ | Remember | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 14 | State Milne Thomson method. | $f^{\prime}(z)$ express completely in terms of z by replacing x by z and y by zero. | Jnderstand | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 15 | Define Harmonic Conjugate. | Given a function $u(x, y)$ harmonic in an open disk, then we can find another harmonic function $v(x, y)$ so that $u+i v$ is an analytic function of $z$ in the disk. Such a function $v$ is called a harmonic conjugate of $u$. | Remember | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 16 | $\begin{aligned} & \text { What is real } \\ & \text { part of the } \\ & \text { complex } \\ & \text { number } z=x \\ & + \text { iy? } \end{aligned}$ | The real part of the complex number $\mathrm{z}=\mathrm{x}+\mathrm{iy}$ is x . | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 17 | What is complex conjugate? | The complex number $\mathrm{z}=\mathrm{x}-\mathrm{iy}$ is called the complex conjugate of z . | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 18 | What is imaginary part of the complex number $\mathrm{z}=\mathrm{x}$ + iy ?. | The imaginary part of the complex number $\mathrm{z}=\mathrm{x}+\mathrm{iy}$ is y | Remember | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |

| $\begin{array}{\|c} \hline \mathrm{S} \\ \mathrm{No} \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 19 | Explain <br> Limit of the complex <br> Function. | A function $\mathrm{w}=\mathrm{f}(\mathrm{z})$ is said to tend to limit $l$ as z approaches a point $\mathrm{z}_{0}$, if for every real $\varepsilon$, we can find a positive $\delta$ such that $\|f(z)-l\|<\varepsilon$ for $0<\left\|z-z_{0}\right\|<\delta$.we write $\underset{z \rightarrow z_{0}}{\operatorname{Lt}} f(z)=l$ | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 20 | Explain Differentiabili ty of complex function. | Let $\mathrm{w}=\mathrm{f}(\mathrm{z})$ be a given function defined for all z in a neighbourhood of $\mathrm{z}_{0}$.If $\lim _{\Delta z \rightarrow 0} \frac{f\left(z_{0}+\Delta z\right)-f\left(z_{0}\right)}{\Delta z}$ exists, the function $\mathrm{f}(\mathrm{z})$ is said to be derivable at $\mathrm{z}_{0}$ and the limit is denoted by $f^{\prime}\left(z_{0}\right) \cdot f^{\prime}\left(z_{0}\right)$ if exists is called the derivative of $\mathrm{f}(\mathrm{z})$ at $\mathrm{z}_{0}$. | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 21 | List polar form of the CauchyRiemann equation. | If $f(z)=f\left(r e^{i \theta}\right)=u(r, \theta)+i v(r, \theta)$ and $\mathrm{f}(\mathrm{z})$ is derivable at $z_{0}=r_{0} e^{i \theta_{0}}$ then $\frac{\partial u}{\partial r}=\frac{1}{r} \frac{\partial v}{\partial \theta}, \frac{\partial v}{\partial r}=-\frac{1}{r} \frac{\partial u}{\partial \theta}$ | Jnderstand | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 22 | Define Regular function. | A complex function is said to be analytic on a region R if it is complex differentiable at every point in R . | Remember | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 23 | Define Singularities. | A complex function may fail to be analytic at one or more points through the presence of singularities. | Remember | CLO2 | $\begin{gathered} \text { CAHS004.0 } \\ 2 \end{gathered}$ |
| 24 | Explain the term Entire function. | A complex function that is analytic at all finite points of the complex plane is said to be entire function. | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 25 | State Cauchy- <br> Riemann equations. | The Cauchy-Riemann equations on a pair of real-valued functions of two real variables $u(x, y)$ and $v(x, y)$ are the two equations: <br> 1. $\frac{\partial u}{\partial x}=\frac{\partial v}{\partial y}$ <br> 2. $\frac{\partial u}{\partial y}=-\frac{\partial v}{\partial x}$ <br> Typically $u$ and $v$ are taken to be the real and imaginary parts respectively of a complex-valued function of a single complex variable $\mathrm{z}=\mathrm{x}+\mathrm{iy}, \mathrm{f}(\mathrm{x}+\mathrm{iy})=\mathrm{u}(\mathrm{x}, \mathrm{y})+\mathrm{iv}(\mathrm{x}, \mathrm{y})$ | Jnderstand | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 26 | Define harmonic function. | Solutions of laplace equations having second order partial derivatives are called harmonic functios. | Remember | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |

| $\begin{array}{\|c} \mathbf{S} \\ \mathbf{N o} \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 27 | Define Conjugate harmonic function. | If two harmonic functions $u$ and $v$ satisfy the Cauchy-Reimann equations in a domain $D$ and they are real and imaginary parts of an analytic function $f$ in $D$ then $v$ is said to be a conjugate harmonic function of $u$ in D.If $f(z)=u+i v$ is an analytic function and if $u$ and $v$ satisfy Laplace's equation, then $u$ and $v$ are called conjugate harmonic functions. | Remember | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 28 | State Milne Thomson method. | To express $f^{\prime}(z)$ completely in terms of z by replacing x by z and y by zero. | Jnderstand | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ \hline \end{gathered}$ |
| 29 | Define Harmonic Conjugate. | Given a function $u(x, y)$ harmonic in an open disk, then we can find another harmonic function $v(x, y)$ so that $u+i v$ is an analytic function of $z$ in the disk, Such a function $v$ is called a harmonic conjugate of $u$. | Remember | CLO3 | $\begin{gathered} \text { CAHS004.0 } \\ 3 \end{gathered}$ |
| 30 | What is the value of $f^{\prime}(z)$ | The value of $f^{\prime}(z)$ is $f^{\prime}(z)=\frac{\partial u}{\partial x}+i \frac{\partial v}{\partial x}$ | Jnderstand | CLO1 | $\begin{gathered} \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| UNIT - II |  |  |  |  |  |
| 1 | Write the properties of continuous | All polynomials, exponential, logarithmic and trigonometric functions are continuous. | Remember | CLO1 | CAHS004.0 |
| 2 | Write the properties of derivative | Every differentiable functions is a continuous but converse need not be true | Remember | CLO1 | CAHS004.0 |
| 3 | Define a Complex function? | Let $D$ be a nonempty set in C. A single-valued complex function or, simply, a complex function $\mathrm{f}: \mathrm{D} \rightarrow \mathrm{C}$ is a map that assigns to each complex argument $\mathrm{z}=\mathrm{x}+\mathrm{iy}$ in D a unique complex number $\mathrm{w}=\mathrm{u}+\mathrm{iv}$. We write $\mathrm{w}=\mathrm{f}(\mathrm{z})$. | Remember | CLO1 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 4 | What is the reciprocal of complex number? | The reciprocal of complex number is $x-i y / x^{2}+y^{2}$ | Jnderstand | CLO1 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 1 \end{gathered}$ |
| 5 | What is a line integral? | A line integral is just an integral of a function along a path or curve. In this case, the curve is a straight line - a segment of the $x$-axis that starts at $x=a$ and ends at $x=b$. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 6 | State Cauchy goursat Theorem. | let $\mathrm{F}(\mathrm{z})=\mathrm{u}(\mathrm{x}, \mathrm{y})+\mathrm{iv}(\mathrm{x}, \mathrm{y})$ be analytic on and within a simple closed contour (or curve ) ' c ' and let $\mathrm{f}^{\prime}(\mathrm{z})$ be continuous there,then and if integral $f(z) d z$ is equal to zero | Jnderstand | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |

| $\begin{array}{\|c\|} \hline \mathbf{S} \\ \text { No } \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | Write nth order Cauchy integral formula. | Let $f(z)$ be an regular function everywhere on and within a closed contour $c$. If $z=a$ is any point within $c$ then $f^{n}(a)=\frac{n!}{2 \pi i} \int_{c} \frac{f(z)}{(z-a)^{n+1}} d z$ | Remember | CLO6 | $\begin{gathered} \text { CAHS004.0 } \\ 6 \end{gathered}$ |
| 8 | Define pole | A point at which a function $f(z)$ is not analytic is called a pole. | Remember | CLO5 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 5 \\ \hline \end{gathered}$ |
| 9 | Define the contour integrals | Contour integration is the process of calculating the values of a contour_integrals around a given contour in the complex plane | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 10 | Define the continuous function. | A function $\mathrm{f}(\mathrm{z})$ is said to be continuous at $\mathrm{z}=\mathrm{z}_{0}$, $\mathrm{f} \mathrm{f}\left(\mathrm{z}_{0}\right)$ is defined and $\underset{z \rightarrow z_{0}}{\operatorname{Lt}} f(z)=f\left(z_{0}\right)$ | Remember | CLO5 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 11 | Define the orthogonality curves | Two curves intersecting at a point p are said to intersect orthogonally. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 12 | Define the simple closed curve. | A curve which does not intersect is called a simple closed curve. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 13 | State the moreras theorem. | If a function $f$ is continuous throughout a simple connected domain $d$ and if integral $f(z) d z$ is equal to zero for every closed contour $c$ in $D$ then $f(z)$ is analytic in $D$. | Jnderstand | CLO6 | $\begin{gathered} \text { CAHS004.0 } \\ 6 \end{gathered}$ |
| 14 | What is Path independence | We say the integral $f(z) d z$ is path independent if it has the same value for any two paths with the same endpoints. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 15 | Explain <br> Extensions of Cauchy's theorem? | Cauchy's theorem requires that the function $f(z)$ be analytic on a simply connected region. In cases where it is not, we can extend it in a useful way. Suppose $R$ is the region between the two simple closed curves C1 and C2. Note, both C1 and C2 are oriented in a counterclockwise direction. | Jnderstand | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 16 | What is a domain? | An open and connected subset $\mathrm{G} \subseteq \mathrm{C}$ is called a domain. | Jnderstand | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \\ \hline \end{gathered}$ |
| 17 | Define line integral. | A line integral is an integral where the function to be integrated is evaluated along a curve. we define $\int_{a}^{b} F(t) d t=\int_{a}^{b} u(t) d t+i \int_{a}^{b} v(t) d t$ | Remember | CLO5 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 18 | What is real part of | The real part of $\int_{a}^{b} F(t) d t$ is $\int_{a}^{b} u(t) d t$ | Jnderstand | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |

| $\begin{array}{\|c\|} \hline \text { S } \\ \text { No } \\ \hline \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\int_{a}^{b} F(t) d t ?$ |  |  |  |  |
| 19 | What is imaginary part of $\int_{a}^{b} F(t) d t$ | The imaginary part of $\int_{a}^{b} F(t) d t$ is $\int_{a}^{b} v(t) d t$ | Jnderstand | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 20 | State Cauchy integral Theorem. | let $\mathrm{F}(\mathrm{z})=\mathrm{u}(\mathrm{x}, \mathrm{y})+\mathrm{iv}(\mathrm{x}, \mathrm{y})$ be an analytic on and within a simple closed contour (or curve ) ' c ' and let f ' $(\mathrm{z})$ be continuous there, then $\int_{c} f(z) d z=0$ | Jnderstand | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 21 | State Cauchy integral formula. | Let $f(z)$ be an analytic function everywhere on and within a closed contour $c$. If $z=a$ is any point within $c$ then $f(a)=\frac{1}{2 \pi i} \int_{c} \frac{f(z)}{(z-a)} d z$ where the integral is taken in the positive sense around $c$. | Jnderstand | CLO6 | $\begin{gathered} \text { CAHS004.0 } \\ 6 \end{gathered}$ |
| 22 | State generalization of Cauchy integral formula. | Let $f(z)$ be an analytic function everywhere on and within a closed contour $c$. If $z=a$ is any point within $c$ then $f^{n}(a)=\frac{n!}{2 \pi i} \int_{c} \frac{f(z)}{(z-a)^{n+1}} d z$ | Jnderstand | CLO6 | $\begin{gathered} \text { CAHS004.0 } \\ 6 \end{gathered}$ |
| 23 | Define indefinite integral. | The integral $\int f(z) d z$ is called indefinite integral. | Remember | CLO6 | $\begin{gathered} \text { CAHS004.0 } \\ 6 \end{gathered}$ |
| 24 | State morera's theorem. | If a function f is continuous through out a simple connected domain D and if $\int_{c} f(z) d z=0$ for every closed contour $c$ in $D$ then $f(z)$ is analytic in $D$. | Jnderstand | CLO6 | $\begin{gathered} \text { CAHS004.0 } \\ 6 \end{gathered}$ |
| 25 | Define singular point. | A point at which a function $f(z)$ is not analytic is called a singular point | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 26 | Define contour. | A continuous arc without multiple point is called contour. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \\ \hline \end{gathered}$ |
| 27 | Define continuous function. | A function $\mathrm{f}(\mathrm{z})$ is said to be continuous at $\mathrm{z}=\mathrm{z}_{0}$, if $\mathrm{f}\left(\mathrm{z}_{0}\right)$ is defined and $\underset{z \rightarrow z_{0}}{\operatorname{Lt}} f(z)=f\left(z_{0}\right)$ | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 28 | Define laplace equation. | If $f(z)$ is analytic function in a domain $D$, then $U$ and $v$ satisfies the equation $\frac{\partial^{2}}{\partial x^{2}}+\frac{\partial^{2}}{\partial y^{2}}=0$ | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |

| $\begin{array}{\|c\|} \hline \mathbf{S} \\ \text { No } \\ \hline \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 29 | Define orthogonality. | Two curves intersecting at a point p are said to intersect orthogonally. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \\ \hline \end{gathered}$ |
| 30 | Define laplacian operator. | The operator $\nabla=\frac{\partial^{2}}{\partial x^{2}}+\frac{\partial^{2}}{\partial y^{2}}$ is called laplacian operator. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \end{gathered}$ |
| 31 | Define simple closed curve. | A curve which does not intersect is called a simple closed curve. | Remember | CLO5 | $\begin{gathered} \text { CAHS004.0 } \\ 5 \\ \hline \end{gathered}$ |
| UNIT - III |  |  |  |  |  |
| 1 | Define singularity of analytic function. | A zero of an analytic function $f(z)$ is a value of $z$ such that $f(z)=0$. Particularly a point a is called a singularity of an analytic function $f(z)$ if $f(a)=0$ | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 2 | Define singularity ofm ${ }^{\text {th }}$ order. | If an analytic function $\mathrm{f}(\mathrm{z})$ can be expressed in the form $f(z)=(z-a)^{m} \Phi(z)$ where $\Phi(z)$ is analytic function and $\Phi(a) \neq 0$ then $\mathrm{z}=\mathrm{a}$ is called singularity of $\mathrm{m}^{\text {th }}$ order. of the function $\mathrm{f}(\mathrm{z})$. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 3 | Define Singular point of an analytic function. | A point at which an analytic function $f(z)$ is not analytic, i.e. at which $f^{\prime}(z)$ fails to exist, is called a singular point or singularity of the function. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \backslash \end{gathered}$ |
| 4 | Define Isolated singularity? | A singular point $z_{0}$ is called an isolated singular point of an analytic function $f(z)$ if there exists a deleted $\varepsilon$ spherical neighborhood of $z_{0}$ that contains no singularity. If no such neighborhood can be found, $z_{0}$ is called a non-isolated singular point. | Remember | CLO10 | $\begin{gathered} \text { CAHSO04.1 } \\ 0 \end{gathered}$ |
| 5 | Define nonisolated singularity? | A singular point $z_{0}$ is called an isolated singular point of an analytic function $f(z)$ if there exists a deleted $\varepsilon$ spherical neighborhood of $z_{0}$ that contains no singularity. If no such neighborhood can be found, $z_{0}$ is called a non-isolated singular point. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 6 | Define double pole. | A pole of order two is called a simple pole. | Remember | CLO11 | $\begin{gathered} \hline \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| 7 | Define Removable singularity? | An isolated singular point $z_{0}$ such that $f$ can be defined, or redefined, at $z_{0}$ in such a way as to be analytic at $z_{0}$. A singular point $\mathrm{z}_{0}$ is removable if $\lim _{z \rightarrow z_{0}} f(z) \text { exist }$ | Remember | CLO10 | $\begin{gathered} \text { CAHSO04.1 } \\ 0 \end{gathered}$ |

| $\begin{array}{\|c} \hline \mathbf{S} \\ \text { No } \\ \hline \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 8 | Define Essential singularity | A singular point that is not a pole or removable singularity is called an essential singular point. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 9 | Define Residues at Poles. | If $\mathrm{f}(\mathrm{z})$ has a simple pole at $\mathrm{z}_{0}$, then $\operatorname{Re}\left[\left[f, z_{0}\right]=\lim _{Z \rightarrow Z_{0}}\left(z-z_{0}\right) f(z)\right.$ | Remember | CLO11 | $\begin{gathered} \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| 10 | Stat Cauchy's Residue Theorem. | $\int_{c} f(z) d z=2 \pi i \sum_{a \in A} \operatorname{Re}_{z=a_{i}} f(z)$ Where A is the set of poles contained inside the contour | Jnderstand | CLO11 | $\begin{gathered} \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| 12 | Define Residue at infinity. | The residue at infinity is given by: $\operatorname{Res}[f(z)]_{Z=\infty}=-\frac{1}{2 \pi i} \int_{C} f(z) d z$ <br> Where $f$ is an analytic function except at finite number of singular points and $C$ is a closed countour so all singular points lie inside it. | Remember | CLO11 | $\begin{gathered} \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| 13 | Define the Power series. | A series of the form $\sum a_{n} z^{n}$ is called as power series. <br> That is $\sum a_{n} z^{n}=a_{1} z+a_{2} z^{2}+\ldots \ldots \ldots+a_{n} z^{n}+\ldots .$. | Remember | CLO7 | CAHS004.0 $7$ |
| 14 | State Taylor's series. | The Taylor series is an infinite series, whereas a Taylor polynomial is a polynomial of degree n and has a finite number of terms. The form of a Taylor polynomial of degree $n$ for a function $f(z)$ at $x=a$ is $f(z)=f(a)+f^{\prime}(a)(z-a)+f^{\prime \prime}(0) \frac{(z)^{2}}{2!}+\ldots \ldots \ldots \ldots .\|z-a\|<r$ | Remember | CLO9 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 9 \end{gathered}$ |
| 15 | Write Taylor series at $\mathrm{x}=0$ | Taylor series expansion of a function about $\mathrm{x}=0$, $\left.f(z)=f(0)+f^{\prime}(0) z\right)+f^{\prime \prime}(0) \frac{(z)^{2}}{2!}+f^{\prime \prime \prime}(0) \frac{(z)^{3}}{3!}+\ldots \ldots \ldots+f^{n}(0) \frac{(z)^{n}}{n!}+$ <br> This series is called astaylor series expansion of $\mathrm{z}=0$. | Remember | CLO9 | $\begin{gathered} \text { CAHS004.0 } \\ 9 \end{gathered}$ |
| 16 | State Laurent series. | The Laurent series for a complex function $f(z)$ about a point $c$ is given by: $\begin{aligned} & f(z)=\sum_{n=-\infty}^{\infty} a_{n}(z-a)^{n} \\ & \quad f(z)=\sum_{n=0}^{\infty} a_{n}(z-a)^{n}+\sum_{n=1}^{\infty} b_{n} \frac{1}{(z-a)^{n}} \end{aligned}$ | Remember | CLO9 | $\begin{gathered} \text { CAHS004.0 } \\ 9 \end{gathered}$ |

| $\begin{array}{\|c} \left\lvert\, \begin{array}{c} \text { S } \\ \text { No } \end{array}\right. \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | where the $a_{n}$ and $a$ are constants. |  |  |  |
| 17 | Define the Power series. | A series of the form $\sum a_{n} z^{n}$ is called as power series. <br> That is $\sum a_{n} z^{n}=a_{1} z+a_{2} z^{2}+\ldots \ldots \ldots+a_{n} z^{n}+\ldots$. | Remember | CLO7 | $\begin{gathered} \text { CAHS004.0 } \\ 7 \end{gathered}$ |
| 18 | State Power series. | A series of the form $\sum a_{n} z^{n}$ is called as power series. <br> That is $\sum a_{n} z^{n}=a_{1} z+a_{2} z^{2}+\ldots \ldots \ldots+a_{n} z^{n}+\ldots \ldots$ | Remember | CLO7 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 7 \end{gathered}$ |
| 19 | State Taylor's series. | The Taylor series is an infinite series, whereas a Taylor polynomial is a polynomial of degree n and has a finite number of terms. The form of a Taylor polynomial of degree n for a function $\mathrm{f}(\mathrm{z})$ at $\mathrm{x}=\mathrm{a}$ is $f(z)=f(a)+f^{\prime}(a)(z-a)+f^{\prime \prime}(0) \frac{(z)^{2}}{2!}+\ldots . . . . . . . .\|z-a\|<r$ | Remember | CLO9 | $\begin{gathered} \text { CAHS004.0 } \\ 9 \end{gathered}$ |
| 20 | State Maclaurin series. | A Maclaurin series is a Taylor series expansion of a function about $\mathrm{x}=0$, is called as macurins series. | Remember | CLO9 | $\begin{gathered} \hline \text { CAHS004.0 } \\ 9 \end{gathered}$ |
| 21 | State Laurent series. | The Laurent series for a complex function $f(z)$ about a point $c$ is given by: $\begin{aligned} & f(z)=\sum_{n=-\infty}^{\infty} a_{n}(z-a)^{n} \\ & \quad f(z)=\sum_{n=0}^{\infty} a_{n}(z-a)^{n}+\sum_{n=1}^{\infty} b_{n} \frac{1}{(z-a)^{n}} \end{aligned}$ <br> where the $\mathrm{a}_{\mathrm{n}}$ and $\mathrm{b}_{\mathrm{n}}$ are constants. | Remember | CLO9 | $\begin{gathered} \text { CAHS004.0 } \\ 9 \end{gathered}$ |
| 22 | Define Zero of an analytic function. | A zero of an analytic function $f(z)$ is a value of $z$ such that $f(z)=0$. Particularly a point a is called a zero of an analytic function $\mathrm{f}(\mathrm{z})$ if $\mathrm{f}(\mathrm{a})=0$. | Remember | CLO10 | $\begin{gathered} \hline \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 23 | Define Zero of $\mathrm{m}^{\text {th }}$ order. | If an analytic function $\mathrm{f}(\mathrm{z})$ can be expressed in the form $f(z)=(z-a)^{m} \phi(z)$ where $\phi(z)$ is analytic function and $\phi(a) \neq 0$ then $\mathrm{z}=\mathrm{a}$ is called zero of $\mathrm{m}^{\text {th }}$ order of the function $\mathrm{f}(\mathrm{z})$. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 24 | Define Singular point of an analytic function. | A point at which an analytic function $f(z)$ is not analytic, i.e. at which $f^{\prime}(z)$ fails to exist, is called a singular point or singularity of the function. | Remember | CLO10 | $\begin{gathered} \hline \text { CAHS004.1 } \\ 0 \end{gathered}$ |

| $\begin{array}{\|c\|} \hline \mathbf{S} \\ \text { No } \end{array}$ | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 25 | Define Isolated singular points. | A singular point $z_{0}$ is called an isolated singular point of an analytic function $f(z)$ if there exists a deleted $\varepsilon$ spherical neighborhood of $z_{0}$ that contains no singularity. If no such neighborhood can be found, $z_{0}$ is called a non-isolated singular point. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 26 | Define nonisolated singular points. | A singular point $z_{0}$ is called an isolated singular point of an analytic function $f(z)$ if there exists a deleted $\varepsilon$ spherical neighborhood of $z_{0}$ that contains no singularity. If no such neighborhood can be found, $z_{0}$ is called a non-isolated singular point. | Remember | CLO10 | $\begin{gathered} \hline \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 27 | Define Simple pole. | A pole of order 1 is called a simple pole. | Remember | CLO11 | $\begin{gathered} \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| 28 | Define Removable singular point. | An isolated singular point $\mathrm{z}_{0}$ such that f can be defined, or redefined, at $\mathrm{z}_{0}$ in such a way as to be analytic at $\mathrm{z}_{0}$. A singular point $\mathrm{Z}_{0}$ is removable if exist $\lim _{z \rightarrow z_{0}} f(z) \text { exist. }$ | Remember | CLO10 | $\begin{gathered} \hline \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 29 | Define Essential singular point. | A singular point that is not a pole or removable singularity is called an essential singular point. | Remember | CLO10 | $\begin{gathered} \text { CAHS004.1 } \\ 0 \end{gathered}$ |
| 30 | Define <br> Residues at Poles | If $\mathrm{f}(\mathrm{z})$ has a simple pole at $\mathrm{z}_{0}$, then $\operatorname{Re} s\left[f, z_{0}\right]=\lim _{Z \rightarrow Z_{0}}\left(z-z_{0}\right) f(z)$ | Remember | CLO11 | $\begin{gathered} \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| 31 | Stat Cauch's Residue Theorem. | $\int_{c} f(z) d z=2 \pi i \sum_{a \in A} \operatorname{Re}_{z=a_{i}} f(z)$ Where A is the set of poles contained inside the contour. | Jnderstand | CLO11 | CAHS004.1 |
| 32 | Define Residue at infinity. | The residue at infinity is given by: $\operatorname{Res}[f(z)]_{Z=\infty}=-\frac{1}{2 \pi i} \int_{C} f(z) d z$ <br> Where $f$ is an analytic function except at finite number of singular points and $C$ is a closed countour so all singular points lie inside it. | Remember | CLO11 | $\begin{gathered} \text { CAHS004.1 } \\ 1 \end{gathered}$ |
| UNIT - IV |  |  |  |  |  |
| 1 | Define expectation? | The sum of products of different values of x and the corresponding probabilities | Remember | CLO15 | $\begin{gathered} \text { CAHS004.1 } \\ 5 \end{gathered}$ |
