| Course Faculty    | Dr.Ch Santa<br>Ms. Y Deep<br>Mr. S Laxma<br>Ms. B Prava | chala, Associate<br>iah, Associate Pr<br>chi, Assistant Pro<br>an Kumar, Assist<br>Ilika, Assistant Profe<br>a, Assistant Profe | ofessor<br>fessor<br>ant Professor<br>rofessor |            |         |  |

### I. COURSE OVERVIEW:

This course provides a comprehensive introduction to operating system design concepts, data structures and algorithms. The course is designed to provide in-depth critique on the problems of resource management and scheduling, concurrency and synchronization, memory management, file management, peripheral management, protection and security. This course is intended to discuss the topics in a general setting not tied to any one particular operating system. Throughout the course, the study of practical aspects that pertain to the most popular operating systems such as Unix/Linux and Windows are considered as case studies

### II. COURSE PRE-REQUISITES:

| Ι | Level | Course Code | Semester | Prerequisites   | Credits |
|---|-------|-------------|----------|-----------------|---------|
|   | UG    | ACS002      | II       | Data Structures | 4       |

## III. MARKS DISTRIBUTION:

| Subject           | SEE Examination | CIA Examination | Total Marks |
|-------------------|-----------------|-----------------|-------------|
| Operating Systems | 70 Marks        | 30 Marks        | 100         |

#### IV. DELIVERY / INSTRUCTIONAL METHODOLOGIES:

| × | Chalk & Talk      | ~        | Quiz     | • | Assignments  | ×           | MOOCs  |
|---|-------------------|----------|----------|---|--------------|-------------|--------|
| < | LCD / PPT         | <b>'</b> | Seminars | × | Mini Project | <b>&gt;</b> | Videos |
| × | Open Ended Experi | ments    |          |   |              |             |        |

#### V. EVALUATION METHODOLOGY:

The course will be evaluated for a total of 100 marks, with 30 marks for Continuous Internal Assessment (CIA) and 70 marks for Semester End Examination (SEE). Out of 30 marks allotted for CIA during the semester, marks are awarded by taking average of two CIA examinations or the marks scored in the make-up examination.

**Semester End Examination (SEE):** The SEE is conducted for 70 marks of 3 hours duration. The syllabus for the theory courses is divided into five module and each module carries equal weight age in terms of marks distribution. The question paper pattern is as follows. Two full questions with "either" or "choice" will be drawn from each module. Each question carries 14 marks. There could be a maximum of two sub divisions in a question.

The emphasis on the questions is broadly based on the following criteria:

| 50 % | To test the objectiveness of the concept.  |
|------|--|
| 50 % | To test the analytical skill of the concept OR to test the application skill of the concept. |

### **Continuous Internal Assessment (CIA):**

CIA is conducted for a total of 30 marks (Table 1), with 20 marks for Continuous Internal Examination (CIE), 05 marks for Quiz and 05 marks Alternative Assessment Tool (AAT).

Table 1: Assessment pattern for CIA

| Component          |          | Total Manles |                |    |
|--------------------|----------|--------------|----------------|----|
| Type of Assessment | CIE Exam | Quiz         | AAT Total Mark |    |
| CIA Marks          | 20       | 05           | 05             | 30 |

### **Continuous Internal Examination (CIE):**

Two CIE exams shall be conducted at the end of the 8th and 16th week of the semester respectively. The CIE exam is conducted for 20 marks of 2 hours duration consisting of five descriptive type questions out of which four questions have to be answered where, each question carries 5 marks. Marks are awarded by taking average of marks scored in two CIE exams.

### **Quiz – Online Examination:**

Two Quiz exams shall be online examination consisting of 25 multiple choice questions and are to be answered by choosing the correct answer from a given set of choices (commonly four). Such a question paper shall be useful in testing of knowledge, skills, application, analysis, evaluation and understanding of the students. Marks shall be awarded considering the average of two quiz examinations for every course.

### **Alternative Assessment Tool (AAT):**

AAT enables faculty to design own assessment patterns during the CIA. The AAT converts the classroom into an effective learning centre. The AAT may include tutorial hours/classes, seminars, assignments, term paper, open ended experiments, METE (Modeling and Experimental Tools in Engineering), five minutes video, MOOCs etc

### VI. HOW PROGRAM OUTCOMES ARE ASSESSED:

|      | Program Outcomes (POs)  | Strength | Proficiency<br>assessed by          |
|------|---|----------|-------------------------------------|
| PO 1 | <b>Engineering knowledge</b> : Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex Engineering problems.  | 3        | Presentation on real-world problems |
| PO 2 | <b>Problem analysis</b> : Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences  | 2        | Assignment                          |
| PO 3 | <b>Design/development of solutions</b> : Design solutions for complex engineering problems and design system components or processes that meet the specified needs with Appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. | 1        | Assignment                          |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.  | 1        | Seminar                             |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering Activities with an understanding of the limitations.   | 1        | Seminar                             |

**<sup>3 =</sup> High; 2 = Medium; 1 = Low** 

### VII. HOW PROGRAM SPECIFIC OUTCOMES ARE ASSESSED:

|       | Program Specific Outcomes (PSOs)   | Strength | Proficiency assessed by |
|-------|--|----------|-------------------------|
| PSO 1 | <b>Professional Skills:</b> The ability to understand, analyze and develop computer programs in the areas related to algorithms, system software, multimedia, web design, big data analytics, and networking for efficient design of computer-based systems of varying complexity. | 1        | Seminar                 |
| PSO 2 | <b>Problem-Solving Skills:</b> The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality Product for business success.   | -        | -                       |
| PSO 3 | Successful Career and Entrepreneurship: The ability to employ modern computer languages, environments, and platforms in creating innovative career paths to be an Entrepreneur and a zest for higher studies.  | -        | -                       |

**<sup>3</sup>** = **High**; **2** = **Medium**; **1** = **Low** 

# VIII. COURSE OBJECTIVES:

| The course s     | The course should enable the students to:   |  |  |  |  |
|------------------|---|--|--|--|--|
| Ţ                | Understand the fundamental principles of the operating system, its services and         |  |  |  |  |
| Functionalities. |   |  |  |  |  |
| II               | Illustrate the concepts of processes, inter-process communication,                      |  |  |  |  |
| 11               | synchronization and scheduling.   |  |  |  |  |
| III              | Understand different types of memory management viz. virtual memory, paging and         |  |  |  |  |
| 111              | segmentation.   |  |  |  |  |
| IV               | Identify the reasons for deadlock and understand the techniques for deadlock detection, |  |  |  |  |
| 1 V              | prevention and recovery.  |  |  |  |  |
| V                | Understand the need of protection and security mechanisms in computer systems.          |  |  |  |  |

# IX. COURSE OUTCOMES (COs):

| COs  | <b>Course Outcome</b>                     | CLOs   | Course Learning Outcome  |
|------|---|--------|--|
| CO 1 | Describe the concept operating system and | CLO 1  | Describe the structure of operating system and basic architectural components involved in operating system design. |
|      | operating system design                   | CLO 2  | Describe how the computing resources are   |
|      |   |        | managed by the operating system.   |
|      | design                                    | CLO 3  | Understand the objectives and functions of   |
|      |   |        | modern operating systems.  |
|      |   | CLO 4  | Analyze and design the applications to run in parallel   |
|      |   |        | either using process or thread   |
|      |   |        | models of different operating system   |
| CO 2 | Determine                                 | CLO 5  | Understand and analyze implementation of   |
|      | Process And CPU                           |        | virtual memory   |
|      | Scheduling,                               | CLO 6  | Understand the various resource management   |
|      | Process                                   |        | techniques for timesharing and distributed   |
|      | Coordination                              |        | systems.   |
|      |   | CLO 7  | Describe the mutual exclusion, deadlock  |
|      |   |        | detection in operating system  |
|      |   | CLO 8  | Describe the common algorithms used for both pre-  |
|      |   |        | emptive and non-pre-emptive scheduling of tasks in   |
|      |   |        | operating systems,   |
|      |   |        | such a priority and performance comparison   |
| CO 3 | An ability to                             | CLO 9  | Understand the difference between a process  |
|      | identify and                              |        | and a thread   |
|      | evaluate Memory                           | CLO 10 | Explain the state diagram that describes the states  |
|      | Management And                            |        | and state transitions during the whole lifetime of a   |
|      | Virtual Memory                            |        | process; likewise,   |
|      |   |        | interpret such a state transition diagram  |
|      |   | CLO 11 | Identify the mapping between virtual   |
|      |   |        | memory address into a physical address   |
|      |   | CLO 12 | Explain how a shared memory area can be  |
|      |   |        | implemented using virtual memory   |
|      |   |        | addresses in different processes   |
| CO 4 | To describe the                           | CLO 13 | Identify the need of memory management in  |
|      | File System                               |        | operating systems and understand the   |
|      | Interface, Mass-                          |        | limits of fixed memory allocation schemes  |
|      | Storage Structure                         | CLO 14 | Understand the fragmentation in dynamic memory   |
|      |   |        | allocation, and identify dynamic   |
|      |   |        | allocation approaches  |
|      |   | CLO 15 | Understand how program memory addresses relate to  |

| COs  | <b>Course Outcome</b> | CLOs   | Course Learning Outcome                                |
|------|-----------------------|--------|--|
|      |                       |        | physical memory addresses, memory management in        |
|      |                       |        | base-limit machines,<br>and swapping                   |
|      |                       | CLO 16 | Understand the mechanisms adopted for file             |
|      |                       |        | distribution in applications                           |
| CO 5 | Understand            | CLO 17 | Describe different Mass storage structure and I/O      |
|      | Deadlocks,            |        | systems  |
|      | Protection            | CLO 18 | Understand issues related to file system interface and |
|      |                       |        | implementation, disk                                   |
|      |                       |        | management   |
|      |                       | CLO 19 | Identify the mechanisms adopted for file               |
|      |                       |        | sharing in distributed applications                    |
|      |                       | CLO 20 | Understand the concepts of Storage                     |
|      |                       |        | Management, disk management and disk                   |
|      |                       |        | scheduling   |

### XV. SYLLABUS

### Module-I INTRODUCTION

Operating systems objectives and functions: Computer system architecture, operating systems structure, operating systems operations; Evolution of operating systems: Simple batch, multi programmed, time shared, personal computer, parallel distributed systems, real time systems, special purpose systems, operating system services, user operating systems interface; Systems calls: Types of systems calls, system programs, protection and security, operating system design and implementation, operating systems structure, virtual machines

### Module -II PROCESS AND CPU SCHEDULING, PROCESS COORDINATION

Process concepts: The process, process state, process control block, threads; Process scheduling: Scheduling queues, schedulers, context switch, preemptive scheduling, dispatcher, scheduling criteria, scheduling algorithms, multiple processor scheduling; Real time scheduling; Thread scheduling; Case studies Linux windows; Process synchronization, the critical section problem; Peterson's solution, synchronization hardware, semaphores and classic problems of synchronization, monitors.

### Module -III MEMORY MANAGEMENT AND VIRTUAL MEMORY

Logical and physical address space: Swapping, contiguous memory allocation, paging, structure of page table.

Segmentation: Segmentation with paging, virtual memory, demand paging; Performance of demand paging: Page replacement, page replacement algorithms, allocation of frames, thrashing.

### Module -IV FILE SYSTEM INTERFACE, MASS-STORAGE STRUCTURE

The concept of a file, access methods, directory structure, file system mounting, file sharing, protection, file system structure, file system implementation, allocation methods, free space management, directory implementation, efficiency and performance; Overview of mass storage structure: Disk structure, disk attachment, disk scheduling, disk management, swap space management; Dynamic memory allocation: Basic concepts; Library functions.

### Module -V DEADLOCKS, PROTECTION

System model: Deadlock characterization, methods of handling deadlocks, deadlock prevention, dead lock avoidance, dead lock detection and recovery form deadlock system protection, goals of protection, principles of protection, domain of protection, access matrix, implementation of access matrix, access Control, revocation of access rights, capability based systems, language based protection.

### **Text Books:**

- 1. Abraham Silberschatz, Peter B. Galvin, Greg Gagne, "Operating System Principles", Wiley Student Edition, 8<sup>th</sup> Edition, 2010.
- William Stallings, "Operating System- Internals and Design Principles", Pearson Education, 6<sup>th</sup> Edition, 2002.

### **Reference Books:**

- 1. Andrew S Tanenbaum, "Modern Operating Systems", PHI, 3<sup>rd</sup> Edition, 2007.
- 2. D. M. Dhamdhere, "Operating Systems a Concept based Approach", Tata McGraw-Hill, 2<sup>nd</sup> Edition, 2006

### XVI. COURSE PLAN:

The course plan is meant as a guideline. Probably there may be changes.

| Lecture<br>No | Topics to be covered  | Course<br>Learning<br>Outcomes<br>(CLOs) | Reference     |
|---------------|---|--|---------------|
| 1 - 2         | Computer system architecture, operating systems structure,  | CLO 1                                    | T2: 2.1       |
|               | operating systems operations.   |  | T1: 1.1 - 1.5 |
| 3 - 4         | Evolution of operating systems: Simple batch, multi programmed, time shared, personal computer, parallel                | CLO 6                                    | T2: 2.2       |
|               | distributed systems, real time systems, special purpose systems.  |  |               |
| 5 - 6         | Operating system services, user operating systems interface.<br>Systems calls: Types of systems calls, system programs. | CLO 2                                    | T1: 2.1 - 2.5 |

| 7 - 8   | Protection and security, operating system design and implementation, operating systems structure, virtual machines.  | CLO 5  | T1: 2.6 - 2.8                         |
|---------|--|--------|---------------------------------------|
| 9 - 10  | The process, process state, process control block, threads.  | CLO 10 | T1: 3.1 -3.4<br>T2: 3.1 -3.4          |
| 11 - 14 | Process scheduling: Scheduling queues, schedulers, context switch, preemptive scheduling, dispatcher, scheduling criteria, scheduling algorithms, multiple processor scheduling. | CLO 8  | T1: 5.2 - 5.3                         |
| 15      | Real time scheduling; Thread scheduling.   | CLO 8  | T1: 5.4 -5.5                          |
| 16      | Case studies - Linux, Windows;   | CLO 10 | T1:5.6,21.4<br>T2: 8.3 -8.5           |
| 17 - 19 | Process synchronization, the critical section problem, Peterson's solution, synchronization hardware.  | CLO 7  | T1: 6.1 - 6.4                         |
| 20 - 21 | Semaphores and classic problems of synchronization, monitors.  | CLO 7  | T1: 6.5 -6.7<br>T2: 6.7 -6.8,<br>6.10 |
| 22 - 24 | Swapping, contiguous memory allocation, paging, structureof page table, Segmentation with paging.  | CLO 11 | T1: 8.1 - 8.3                         |
| 25 - 26 | Virtual memory, demand paging, performance of demand paging.   | CLO 13 | T1: 8.4 -8.6<br>T1: 9.1 -9.2          |
| 27 - 29 | Page replacement: Page replacement algorithms, allocation of frames, thrashing.  | CLO 15 | T1: 9.4 - 9.6                         |
| 30- 31  | The concept of a file, access methods, directory structure.  | CLO 18 | T1:10.1-10.3                          |
| 32 - 35 | File system mounting, file sharing, protection, file system structure, file system implementation.   | CLO 18 | T1:10.4-10.6<br>T1:11.1-11.2          |
| 36 - 38 | Allocation methods, free space management, directory implementation, efficiency and performance.   | CLO 19 | T1: 11.3- 11.6                        |
| 39 - 40 | Overview of mass storage structure: Disk structure, disk attachment, disk scheduling, disk management, swap space management.  | CLO 20 | T1:12.1 - 12.6                        |
| 41 - 42 | Dynamic memory allocation: Basic concepts; Library functions.  | CLO 19 | T1:12.7 - 12.8                        |
| 43 - 45 | Deadlock characterization, methods of handling deadlocks.  | CLO 21 | T1: 7.1 - 7.2                         |
| 46 - 50 | Deadlock prevention, dead lock avoidance, dead lock detection and recovery form deadlock system protection.  | CLO 22 | T1: 7.3 - 7.7                         |
| 51 - 52 | Goals of protection, principles of protection, domain of protection.   | CLO 23 | T1:14.1 - 14.3                        |
| 53 - 55 | Access matrix, implementation of access matrix, access control, revocation of access rights.   | CLO 25 | T1:14.4 - 14.7                        |
| 56 - 58 | Capability based systems, language based protection.   | CLO 25 | T1:14.8 - 14.9                        |

# XVII. GAPS IN THE SYLLABUS - TO MEET INDUSTRY / PROFESSION REQUIREMENTS:

| S no | Description                                     | Proposed actions                        | Relevance with POs | Relevance with PSOs |
|------|---|---|--------------------|---------------------|
| 1    | Interrupts, Exceptions, and System Calls.       | Assignments                             | PO 2, PO 3         | PSO 1               |
| 2    | Multicore Programming,<br>Multithreading Models | Seminars /<br>Guest Lectures<br>/ NPTEL | PO 2, PO 3         | PSO 1               |
| 3    | Free Space Management, I/O<br>Systems           | Seminars<br>/ NPTEL                     | PO 1, PO 3         | PSO 1               |
