## **OPERATING SYSTEMS**

<b>Course Code</b>		Category	Ho	ours / V	Veek	Credits	Maximum Marks		
AITB04 Contact Classes: 45		Core	L	Т	Р	С	CIA	SEE	Tota
			3	1	-	4	30	70	100
		Tutorial Classes: 15	F	Practical Classes: Nil			Total Classes: 60		
COURS	SE OBJECTIVE	ES:	·						
Ι		of operating system, its	services a	and fun	ctionali	ties with the	evolution	of oper	ating
II	systems. The concepts of	of processes, inter-proces	s commu	inicatio	n syncl	pronization a	nd schedi	iling use	ed in
п	process manag	• •	s commu	mean	n, synci		na senea	ung use	a m
III	•	elated to memory manag		00	and seg	mentation inc	luding pr	otection	and
IV	•	inisms used in computer	•		ronaaa	tachniquae u	ad for de	adloak	
1 V	-	ights into the reasons for ention and recovery.	deadloc	K OCCUI	rences,	techniques us	sed for de	autock	
	-	-							
COUR	SE OUTCOMES	S:							
CO 1	<b>Describe the importance of computer system resources for designing operating systems security policies.</b>								
CO 2	Demonstrate	process control blocks a	and threa	ads use	ed in scl	neduling the	process.		
CO 3		nportance of system cal erating systems.	ls to diff	ferent A	Applica	tions Progra	mming I	nterfac	e in
CO 4	<b>Construct the</b>	critical section problem	n used fo	or proc	ess syn	chronization	•		
CO 5	Distinguish log	gical and physical addr	ess spac	e appli	ed in pi	cocess manag	gement		
CO 6	Construct var	ious page replacement	algorith	ms app	olied for	· allocation o	f frames		
CO 7	Describe the u management (	ise of storage managem technologies.	ent polic	cies wit	th respe	ct to differe	nt storag	e	
CO 8	Classify the di	ifferent access methods	used for	r file m	anagen	nent systems.			
CO 9		the working of operatin					nd file sy	ystem	
CO 10	0	for implementing diffe concept of free space ma cems.	-				nd perfo	rmance	of
CO 11	Make use of v	arious methods of hand	lling dea	dlocks	used fo	or system mo	dels.		

<b>MODULE-I</b>	INTRODUCTION	Hours: 10					
Operating systems objectives and functions: Computer system architecture, operating systems structure, operating systems operations; Evolution of operating systems: Simple batch, multi programmed, time shared, personal computer, parallel distributed systems, real time systems, special purpose systems, operating system services, user operating systems interface; Systems calls: Types of systems calls, system programs, protection and security, operating system design and implementation, operating systems structure, virtual machines.							
MODULE -II	PROCESS AND CPU SCHEDULING, PROCESS COORDINATION	Hours: 10					
Process concepts: The process, process state, process control block, threads; Process scheduling: Scheduling queues, schedulers, context switch, preemptive scheduling, dispatcher, scheduling criteria, scheduling algorithms, multiple processor scheduling; Real time scheduling; Thread scheduling; Case studies Linux windows; Process synchronization, the critical section problem; Peterson's solution, synchronization hardware, semaphores and classic problems of synchronization, monitors.							
MODULE -II	I MEMORY MANAGEMENT AND VIRTUAL MEMORY	Hours: 08					
Logical and pl	nysical address space: Swapping, contiguous memory allocation, paging, structure o	f page table.					
U	Segmentation: Segmentation with paging, virtual memory, demand paging; Performance of demand paging: Page replacement, page replacement algorithms, allocation of frames, thrashing.						
MODULE -IV	FILE SYSTEM INTERFACE, MASS-STORAGE STRUCTURE	Hours: 09					
The concept of a file, access methods, directory structure, file system mounting, file sharing, protection, file system structure, file system implementation, allocation methods, free space management, directory implementation, efficiency and performance; Overview of mass storage structure: Disk structure, disk attachment, disk scheduling, disk management, swap space management; Dynamic memory allocation: Basic concepts; Library functions.							
MODULE -V	DEADLOCKS, PROTECTION	Hours: 08					
System model: Deadlock characterization, methods of handling deadlocks, deadlock prevention, dead lock avoidance, dead lock detection and recovery form deadlock system protection, goals of protection, principles of protection, domain of protection, access matrix, implementation of access matrix, access control, revocation of access rights, capability based systems, language based protection.							
<b>Text Books:</b>							
Edition, 8	Edition, 8 <sup>th</sup> Edition, 2010.						
2002.
