THEORY OF COMPUTATION

IV Semester: CSE / IT									
Course Code	Category	Hours / Week			Credits	Maximum Marks			
AITB03	Core	L	Т	Р	С	CIA	SEE	Total	
		3	1	-	4	30	70	100	
Contact Classes: 45	Tutorial Classes: 15	Practical Classes: Nil				Total Classes: 60			

OBJECTIVES:

The course should enable the students to:

- I. Comprehend abstract, mathematical models of computation and use them to solve computational problems.
- II. Interpret the relationship between formal languages in Chomsky's hierarchy and different machines.
- III. Analyze and explain the behavior of push-down automata.
- IV. Understand the limits and capacities of Turing machines to recognize languages.

COURSE OUTCOMES(COs):

- CO 1. Understand the functionality of deterministic finite automata and Non-deterministic finite automata
- CO 2. Apply the regular languages , regular expressions to construct finite automata
- CO 3. Apply the context free grammars to construct derivation trees and the accept various strings
- CO 4. Compare the functionality of push down automata with deterministic finite automata
- CO 5. Apply the concept of Turing machines to solve the complex functions

COURSE LEARNING OUTCOMES (CLOs):

- 1. Able to show the importance of alphabets, strings and languages to construct finite automata
- 2. Demonstrate the behavior of deterministic finite automata
- 3. Able to understand the functionality of non- deterministic finite automata
- 4. Show the differences between the deterministic finite automata and non- deterministic finite automata
- 5. Able to understand the Regular sets, regular expressions, identity rules
- 6. Analyze the construction of finite automata for a given regular expressions
- 7. Able to understand the conversion of finite automata to regular expressions
- 8. Able to understand the pumping lemma of regular sets, regular grammars, right linear and left linear grammars
- 9. Able to create right most and leftmost derivation trees for given strings
- 10. Analyze the Ambiguity in context free grammars
- 11. Able to understand the minimization process of context free grammars
- 12. Apply the Chomsky normal form and Greibach normal forms to eliminate the Ambiguity in context free grammars
- 13. Apply the push down automata for acceptance of context free languages
- 14. Able to construct the push down automata for given context free languages
- 15. Able to construct the deterministic push down automata to accept the context free languages
- 16. Show the difference between deterministic push down automata and non- deterministic push down automata
- 17. Able to understand the functionality of Turing machine
- 18. Able to understand the recursively enumerable languages and Church's hypothesis
- 19. Analyze the functionality of different types of Turing machines
- 20. Apply the linear bounded automata and context sensitive language

Module -I	Finite Automata	Classes: 10						
Fundamentals: Alp	oncepts of							
automata theory, deterministic finite automata, nondeterministic finite automata, an application of finite automata								
finite automata with epsilon transitions.								
Module -II	Regular Languages	Classes: 9						
Regular sets, regular expressions, identity rules, constructing finite automata for a given regular expressions, conversion of finite automata to regular expressions, pumping lemma of regular sets, closure properties of regular sets (proofs not required), regular grammars-right linear and left linear grammars, equivalence between regular linear grammar and finite automata, inter conversion.								
Module -III	Context Free Grammars	Classes: 8						
Context free grammars and languages: Context free grammar, derivation trees, sentential forms, right most and leftmost derivation of strings, applications.								
Ambiguity in context free grammars, minimization of context free grammars, Chomsky normal form, Greibach normal form, pumping lemma for context free languages, enumeration of properties of context free language (proofs omitted).								
Module -IV	Pushdown Automata	Classes: 9						
Pushdown automata, definition, model, acceptance of context free language, acceptance by final state and acceptance by empty stack and its equivalence, equivalence of context free language and pushdown automata, inter conversion; (Proofs not required); Introduction to deterministic context free languages and deterministic pushdown automata.								
Module -V	Turing Machine	Classes: 10						
Turing machine: Turing machine, definition, model, design of Turing machine, computable functions, recursivey enumerable languages, Church's hypothesis, counter machine, types of Turing machines (proofs not required), linear bounded automata and context sensitive language, Chomsky hierarchy of languages.
