

ELECTRIC DRIVES AND STATIC CONTROL

VI Semester: EEE								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
AEEB23	Core	L	T	P	C	CIA	SEE	Total
		2	1	-	3	30	70	100
Contact Classes: 30	Tutorial Classes: 15	Practical Classes: Nil			Total Classes: 45			
<p>OBJECTIVES: Students will try to learn:</p> <ol style="list-style-type: none"> I. Operate and maintain different types of DC/AC and special electrical machine drives in the industry. II. The steady state behavior and transient dynamics of the converter/chopper fed DC drive III. The performance of different industrial drives considering issues such as energy efficiency, power quality, economic justification, environmental issues and practical liabilities. IV. Starting, braking, and speed control arrangements for electric motors and their applications. <p>COURSE OUTCOMES Upon the successful completion of this course, the students will be able to:</p> <p>CO 1 Illustrate the speed control of DC motors with single phase and three phase-controlled rectifiers for verification of speed torque characteristics.</p> <p>CO 2 Classify the types of electric drives systems based on the nature of loads, control objectives performance and reliability.</p> <p>CO 3 Develop the current and speed controllers for a closed loop solid state DC motor drives.</p> <p>CO 4 Explain the four-quadrant chopper fed dc motor drives for verification of speed torque characteristics.</p> <p>CO 5 Describe the working of stator voltage control of induction motor drive for speed control of the drive.</p> <p>CO 6 Identify the variable frequency control methods for induction motor and synchronous motor drive applications.</p> <p>CO 7 Summarize the slip power recovery schemes for speed control of induction motors through rotor power in commercial fields.</p> <p>CO 8 Develop the direct and indirect vector control methods of induction motors for smooth functioning of the drive.</p> <p>CO 9 Demonstrate the working of voltage source and current source inverter fed synchronous motor drive for speed control applications.</p> <p>CO 10 Select suitable type and specification of motor drive combinations for efficient conversion and control of electric power.</p>								
MODULE- I	CONTROL OF DC MOTORS THROUGH PHASE CONTROLLED RECTIFIERS							
Introduction to thyristor controlled drives: Single phase semi and fully controlled converters connected to DC separately excited and dc series motors, continuous current operation, output voltage and current waveforms, speed and torque expressions, speed torque characteristics, problems on converter fed DC								

motors; Three phase semi and fully controlled converters connected to DC separately excited and DC series motors, output voltage and current waveforms, speed and torque expressions, speed torque characteristics and problems.	
MODULE-II	SPEED CONTROL OF DC MOTORS
Introduction to four quadrant operation: Motoring operations, electric braking, plugging, dynamic and regenerative braking operations; Four quadrant operation of DC motors by dual converters, closed loop operation of DC motor; Chopper fed DC drives: Single quadrant, two quadrant and four quadrant chopper fed DC separately excited and series excited motors, continuous current operation output voltage and current wave forms, speed torque expressions, speed torque characteristics, problems on chopper fed DC motors and closed loop operation.	
MODULE-III	SPEED CONTROL OF INDUCTION MOTORS THROUGH VARIABLE VOLTAGE AND FREQUENCY
Variable voltage characteristics: Control of induction motor by AC voltage controllers, waveforms, speed torque characteristics.	
Variable frequency characteristics: Variable frequency characteristics, variable frequency control of induction motor by voltage source and current source inverter and cycloconverters, pulse with modulation control, comparison of voltage source inverter and current source inverter operations, speed torque characteristics, numerical problems on induction motor drives, closed loop operation of induction motor drives.	
MODULE-IV	SPEED CONTROL OF INDUCTION MOTORS THROUGH ROTOR RESISTANCE AND VECTOR CONTROL
Static rotor Resistance control: Slip power recovery schemes, static Scherbius drive, static Kramer drive, their performance and speed torque characteristics, advantages and applications, vector control of induction motor drives: Principles of vector control, vector control methods, direct methods of vector control, indirect methods of vector control and problems.	
MODULE-V	SPEED CONTROL OF SYNCHRONOUS MOTORS
Separate control and self control of synchronous motors, operation of self controlled synchronous motors by voltage source inverter and current source inverter cyclo converters. Load commutated CSI fed synchronous motor, operation, waveforms, speed torque characteristics, applications, advantages and numerical problems, closed loop control operation of synchronous motor drives (block diagram only), variable frequency control, cycloconverter, PWM, variable frequency inverter and current source inverter.
