

MICROPROCESSORS AND MICROCONTROLLERS

V Semester: EEE								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
AECB24	CORE	L	T	P	C	CIA	SEE	Total
		2	1	-	3	30	70	100
Contact Classes: 30		Tutorial Classes: 15		Practical Classes: Nil			Total Classes: 45	
<p>OBJECTIVES: The students will try to learn:</p> <p>I The architecture and operation of microprocessors and microcontrollers.</p> <p>II The programming and interfacing of Intel microprocessors, microcontrollers to design processor and controller based circuits.</p> <p>III The applications of microprocessors and microcontrollers in the field of Communications, Electronic measurement, control systems, Consumer electronics industry and other real-time systems.</p>								
<p>COURSE OUTCOMES: After successful completion of the course, Students will be able to</p> <p>CO 1 Outline the internal architecture of 8085, 8086 and 8051 microcomputers to study their functionality.</p> <p>CO 2 Illustrate the organization of registers and memory in 8086 for programming and memory allocation within processor.</p> <p>CO 3 Explain various addressing modes and instruction set of target microprocessor and microcontroller useful for writing assembly language programs.</p> <p>CO 4 Distinguish between minimum mode and maximum mode operation of 8086 microprocessor with timing diagrams.</p> <p>CO 5 Interpret the functionality of various types of interrupts and their structure for controlling the processor or controller and program execution flow.</p> <p>CO 6 Demonstrate the internal architecture and various modes of operation of the devices used for interfacing memory and I/O devices with microprocessor.</p> <p>CO 7 Choose an appropriate data transfer scheme and hardware to perform serial data transfer among the devices.</p> <p>CO 8 Make use of 8051 microcontroller to perform Time/Counter operations in various applications.</p> <p>CO 9 Select the suitable registers of 8051 microcontroller and program it to perform data conversion, interfacing with memory and I/O devices.</p> <p>CO 10 Build necessary hardware and software interface using microcomputer based systems to provide solution for real world problems.</p>								
MODULE -I	8086 MICROPROCESSORS						Classes : 08	
<p>Register organization of 8086, Architecture, signal description of 8086, physical memory organization, general bus operation, I/O addressing capability, special purpose activities, Minimum mode, maximum mode of 8086 system and timings, machine language instruction formats, addressing mode of 8086, instruction set off 8086, assembler directives and operators.</p>								

MODULE -II	PROGRAMMING WITH 8086 MICROPROCESSOR	Classes : 09
Machine level programs, programming with an assembler, Assembly language programs, introduction to stack, stack structure of 8086/8088, interrupts and interrupt service routines. Interrupt cycle of 8086, non-mask able interrupt and mask able interrupts, interrupt programming.		
MODULE -III	INTERFACING WITH 8086/88	Classes: 08
Semiconductor memory interfacing, dynamic RAM interfacing, interfacing i/o ports, PIO 8255 modes of operation of 8255, interfacing to D/A and A/D converters, stepper motor interfacing, control of high power devices using 8255.		
Programmable interrupt controller 8259A, the keyboard /display controller 8279, programmable communication interface 8251 USART, DMA Controller 8257.		
MODULE -IV	8051 MICROCONTROLLER	Classes: 10
8051 Microcontroller – Internal architecture and pin configuration, 8051 addressing modes, instruction set, Bit addressable features. I/O Port structures, assembly language programming using data transfer, arithmetic, logical and branch instructions.		
MODULE -V	SYSTEM DESIGN USING MICROCONTROLLER	Classes : 10
8051 Timers/Counters, Serial data communication and its programming, 8051 interrupts, Interrupt vector table, Interrupt programming. Real world interfacing of 8051 with external memory, expansion of I/O ports, LCD, ADC, DAC, stepper motor interfacing.
