

MICROPROCESSORS AND INTERFACING

V Semester: CSE								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
AEC021	Core	L	T	P	C	CIA	SEE	Total
		3	1	-	4	30	70	100
Contact Classes: 48	Tutorial Classes: 10	Practical Classes: Nil			Total Classes: 58			

OBJECTIVES:
The course should enable the students to:

- I. Understand the basic concepts of microprocessors and develop the architectures of 8085 and 8086.
- II. Analyze and develop assembly language programming for 8086 microprocessor.
- III. Develop various interfacing modules by using assembly language programming.
- IV. Understand and know the basic concepts of advance micro processor architectures like 80386 and 80486.

COURSE OUTCOMES (COs):

1. Describe the concepts of Architectures of 8085 and 8086 with its functionalities and understand the addressing modes and instructions sets of 8086.
2. Describe Minimum mode and maximum mode of operation of 8086 and Analyze the Assembly language programs involving in various arithmetic and logical operations.
3. Discuss the importance of 8251, 8255 and explain interfacing of I/O device with different modules.
4. Analyze the various synchronous and asynchronous serial data transfer schemes in 8086
5. Understand the advanced 16 and 32 bit microprocessors architectures and its features.

COURSE LEARNING OUTCOMES (CLOs):

1. Differentiate between 8085 and 8086 microprocessors architectures and its functionalities.
2. Describe the internal Architecture of 8086 microprocessor and explain its functionalities.
3. Describe in detail about functions of general purpose register and 8086 flag register with its functions.
4. Explain various addressing modes and instruction set present in 8086 microprocessors and Describe in detail about the concept of interrupt, types of interrupts 8086 microprocessor.
5. Understand and apply the fundamentals and procedures and assembler directives of assembly level programming of microprocessors.
6. Develop low level languages like ALP in 8086 microprocessor systems for real time applications
7. Describe Minimum mode and maximum mode of operation and timing diagram of 8086 microprocessor
8. Explain various Assembly language programs involving logical, branch and call instructions.
9. Evaluation of arithmetic expressions, string manipulation, sorting using various Assembly language programs.
10. Identify the importance of various modes of 8255 operation and interfacing to 8086.
11. Discuss the interfacing diagram of I/O devices with keyboard, stepper motor, 7-segment display, LCD and digital to analog and analog to digital converter.
12. Explain in detail about the importance of interrupt and interrupt sub routines in 8086 microprocessor
13. Explain the advance architectures of PIC and also the importance of interfacing a interrupt controller in PIC.
14. Analyze and understand various synchronous and asynchronous serial data transfer schemes in 8086.
15. Develop and design the interfacing circuit diagram of 8251USART with 8086 processor.
16. Understand the high- speed serial communications standards, USB.
17. Understand basic architecture of 16 bit and 32 bit microprocessors with the help of GDT, LDT and multitasking and addressing modes.

18. Flag register 80386: Architecture, register organization, memory access in protected mode 19. Analyze the various advanced microprocessors internal architectures for 80X86 by paging and technical features.		
Unit-I	OVERVIEW OF 8086 MICROPROCESSOR	Classes: 11
Introduction to 8085 microprocessor. RISC and CISC processors, architecture of 8086 microprocessor, special functions of general purpose register, 8086 flag register and function of 8086 flags, addressing modes of 8086, instruction set of 8086, assembler directives, simple programs, procedures, and macros.		
Unit -II	PIN DIAGRAM OF 8086 AND ASSEMBLY LANGUAGE PROGRAMMING	Classes: 09
Minimum mode and maximum mode of operation, timing diagram, Assembly language programs: Assembly language programs involving logical, branch and call instructions, sorting, evaluation of arithmetic expressions, string manipulation.		
Unit -III	8255 PROGRAMMABLE PERIPHERAL INTERFACE (PPI)	Classes: 10
Various modes of 8255 operation and interfacing to 8086; Interfacing keyboard, displays, 8279 Stepper motor and actuators, digital to analog and analog to digital converter interfacing. Interrupt structure of 8086: Interrupt structure of 8086, Vector interrupt table, interrupt service routines; Introduction to DOS and BIOS interrupts, 8259 PIC architecture and interfacing cascading of interrupt controller and its importance.		
Unit -IV	SERIAL DATA TRANSFER SCHEMES	Classes: 09
Asynchronous and synchronous data transfer schemes, 8251 USART architecture and interfacing; TTL to RS 232C and RS232C to TTL conversion; Sample program of serial data transfer; Introduction to high-speed serial communications standards, USB.		
Unit -V	ADVANCED MICROPROCESSORS	Classes: 09
80286 microprocessor: Architecture, registers (Real/Protected mode), privilege levels, descriptor cache, memory access in GDT and LDT, multitasking, addressing modes; Flag register 80386: Architecture, register organization, memory access in protected mode, paging; 80486: Only the technical features.
