MODEL QUESTION PAPER - I

Second Year B.Tech III Semester End Examinations, November – 2018

Regulations: R16

DESIGN AND ANALYSIS OF ALGORITHMS

(Common to CSE / IT)

Time: 3 hours

Max. Marks: 70

Answer ONE Question from each Unit

All Questions Carry Equal Marks

All parts of the question must be answered in one place only

UNIT – I

- Discuss various the asymptotic notations used for best case average case and worst case analysis of algorithms. [7M]
 - Sort the list of numbers using merge sort: 78, 32, 42, 62, 98, 12, 34, and 83. [7M]
- Discuss recursive and iterative versions of binary search algorithm and compare their time complexities. [7M]
 - Describe Strassen's matrix multiplication with example and derive its time complexity. [7M]

UNIT – II

- Illustrate the inorder, preorder, postorder traversal of the following Binary tree Fig:1. [7M]

Fig:1

- Show that for any undirected graph $G = (V, E)$, call to BFS(v) with $v \in V$ results in visiting all the vertices in the connected component containing v. [7M]
- Illustrate BFS and DFS traversal of following graph Fig:2. [7M]

Fig:2

- b) Experimentally compare the performance of Simple Union and Simple Find with Weighted Union and Collapsing Find. For this generate a random sequence of union and find operations. [7M]

UNIT – III

5. a) Explain the steps in finding minimum cost spanning tree of graph using Prim's algorithm and also derive its time complexity. [7M]
 b) Construct optimal binary search for $(a_1, a_2, a_3, a_4) = (\text{do}, \text{if}, \text{int}, \text{while})$, $p(1 : 4) = (3, 3, 1, 1)$ $q(0 : 4) = (2, 3, 1, 1, 1)$. [7M]
6. a) Compute the optimal solution for knapsack problem using greedy method $N=3$, $M=20$, $(p_1, p_2, p_3) = (25, 24, 15)$, $(w_1, w_2, w_3) = (18, 15, 10)$. [7M]
 b) Explain the method involved in finding shortest path for each pair of vertices (i, j) , where $i, j \in V$. [7M]

UNIT – IV

7. a) Explain subset-sum problem and discuss the possible solution strategies using backtracking. [7M]
 b) Draw the portion of state space tree generated by LCBB by the following knapsack problem $n=5$, $(p_1, p_2, p_3, p_4, p_5) = (10, 15, 6, 8, 4)$, $(w_1, w_2, w_3, w_4, w_5) = (4, 6, 3, 4, 2)$ and $m=12$. [7M]
8. a) Write an algorithm for N-queens problem using backtracking. [7M]
 b) Solve the instance of travelling sales person problem given Fig:3 using Least Cost Branch Bound. [7M]

Fig:3

UNIT – V

9. a) **Given** two sets S_1 and S_2 , the disjoint sets problem is to check whether the sets have a common element. Present an $O(1)$ time non-deterministic algorithm for this problem. [7M]
 b) **Explain** clique decision problem and chromatic number decision problems with examples. [7M]
10. a) **Explain** P, NP, NP-complete, NP-hard problems and show their relationship. [7M]
 b) **Differentiate** deterministic and non-deterministic algorithms. [7M]

DESIGN AND ANALYSIS OF ALGORITHMS

III Semester: CSE/IT								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
AIT001	Core	L	T	P	C	CIA	SEE	Total
		3	-	-	3	30	70	100
Contact Classes: 45		Tutorial Classes: Nil		Practical Classes: Nil		Total Classes: 45		
OBJECTIVES:								
The course should enable the students to:								
I. Assess how the choice of data structures and algorithm design methods impacts the performance of programs.								
II. Solve problems using data structures such as binary search trees, and graphs and writing programs for these solutions.								
III. Choose the appropriate data structure and algorithm design method for a specified application.								
IV. Solve problems using algorithm design methods such as the greedy method, divide and conquer, dynamic programming, backtracking, and branch and bound and writing programs for these solutions.								
UNIT-I	INTRODUCTION						Classes: 9	
Algorithm: Pseudo code for expressing algorithms; Performance analysis: Space complexity, time complexity; Asymptotic notations: Big O notation, omega notation, theta notation and little o notation, probabilistic analysis, amortized complexity; Divide and Conquer: General method, binary search, quick sort, merge sort, Strassen's matrix multiplication.								
UNIT-II	SEARCHING AND TRAVERSAL TECHNIQUES						Classes: 8	
Disjoint set operations, union and find algorithms; Efficient non recursive binary tree traversal algorithms, spanning trees; Graph traversals: Breadth first search, depth first search, connected components, biconnected components.								
UNIT-III	GREEDY METHOD AND DYNAMIC PROGRAMMING						Classes: 10	
Greedy method: The general method, job sequencing with deadlines, knapsack problem, minimum cost spanning trees, single source shortest paths.								
Dynamic programming: The general method, matrix chain multiplication optimal binary search trees, 0/1 knapsack problem, single source shortest paths, all pairs shortest paths problem, the travelling salesperson problem.								
UNIT-IV	BACKTRACKING AND BRANCH AND BOUND						Classes: 9	
Backtracking: The general method, the 8 queens problem, sum of subsets problem, graph coloring, Hamiltonian cycles; Branch and bound: The general method, 0/1 knapsack problem, least cost branch and bound solution, first in first out branch and bound solution, travelling salesperson problem.								
UNIT-V	NP-HARD AND NP-COMPLETE PROBLEMS						Classes: 9	
Basic concepts: Non-deterministic algorithms, the classes NP - Hard and NP, NP Hard problems, clique decision problem, chromatic number decision problem, Cook's theorem.

COURSE OUTCOMES (CO's):

1. **Analyze** the running time and space complexity of algorithms.
2. **Use** the mathematical techniques required to prove the time complexity of a program/algorithm and understand tree traversals, Graph traversals and spanning trees.
3. **Illustrate** disjoint set operations union and find.
4. **Demonstrate** non recursive tree traversal algorithms.
5. **Describe** the divide-and-conquer paradigm and explain when an algorithmic design situation calls for it.
6. **Derive** and solve recurrences describing the performance of divide-and-conquer algorithms.
7. **Illustrate** the greedy paradigm and explain when an algorithmic design situation calls for it. Recite algorithms that employ this paradigm. Synthesize greedy algorithms, and analyze them.
8. **Synthesize** new graph algorithms and algorithms that employ graph computations as key components, and analyze them.
9. **Explain** the dynamic-programming paradigm and recite algorithms that employ this paradigm. Synthesize dynamic-programming algorithms, and analyze them.
10. **Apply** Backtracking to n-queen problem, sum of subsets problem, graph coloring and branch and bound to Travelling sales person problem, 0/1 knapsack problem etc.
11. **Describe** the notions of P, NP, NP-complete, and NP-hard.
12. **Able** to apply and implement learned algorithm design techniques and data structures to solve problems.

INSTITUTE OF AERONAUTICAL ENGINEERING

(Autonomous)

Dundigal, Hyderabad - 500 043

DEPARTMENT OF INFORMATION TECHNOLOGY

PROGRAM OUTCOMES	
PO1	Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive
PO11	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES	
PSO1	Professional Skills: The ability to research, understand and implement computer programs in the areas related to algorithms, system software, multimedia, web design, big data analytics, and networking for efficient analysis and design of computer-based systems of varying complexity.
PSO2	Problem-Solving Skills: The ability to apply standard practices and strategies in software project development using open-ended programming environments to deliver a quality product for business success.
PSO3	Successful Career and Entrepreneurship: The ability to employ modern computer languages, environments, and platforms increasing innovative career paths, to be an entrepreneur, and a zest for higher studies.

MAPPING OF COURSE OUTCOMES LEADING TO THE ACHIEVEMENT OF PROGRAM OUTCOMES AND PROGRAM SPECIFIC OUTCOMES:

Course Outcomes	Program Outcomes												Program Specific Outcomes		
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
1	X				X					X			X	X	
2		X	X		X				X	X			X		X
3	X	X	X		X				X	X			X		
4		X	X		X				X	X					X
5		X	X		X				X	X					X
6		X	X		X				X	X					X
7		X			X					X		X	X	X	
8		X			X				X					X	
9			X		X								X		
10		X			X					X			X	X	
11	X			X				X	X			X		X	
12		X	X			X			X		X		X		X

MAPPING OF MODEL QUESTION PAPER QUESTIONS TO THE ACHIEVEMENT OF COURSE OUTCOMES

Question Number	Course Outcomes
