

INSTITUTE OF AERONAUTICAL ENGINEERING

(Autonomous)

Dundigal - 500 043, Hyderabad, Telangana

COURSE CONTENT

CYBER SECURITY LABORATORY								
II Semester: CSE								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
BCSD24	Core	L	Т	Р	С	CIA	SEE	Total
		0	0	4	2	40	60	100
Contact Classes: Nil	Tutorial Classes: Nil	Practical Classes: 42				Total Classes:42		
Prerequisites: Computer Networks								

I. COURSE OVERVIEW:

This course typically aims to equip students with the knowledge and skills necessary to protect information and information systems from various threats. This course covers public key crypto systems, Kerberos, and firewall mechanisms. The students can gain expertise in information security and contribute to the protection of valuable organizational assets

II. COURSE OBJECTIVES:

The students will try to learn:

- I. How to implement the cryptographic algorithms.
- II. How to identify, analyze, and remediate computer security breaches.
- III. The importance of digital signature algorithms

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

- CO1 Implement cryptography techniques and attack detection for providing security solutions.
- CO2 Analyze the impact of public key cryptosystems for secure exchange of information and web transactions.
- CO3 Experiment with a signature scheme using the Digital signature standard.
- CO4 Make Use of hashing and authentication for implementing data integrity and develop Kerberos.
- CO5 Design a firewall for restricting user activities over the network.
- CO6 Apply random number generation techniques for cryptosystems.

IV. COURSE CONTENT:

Week 1: CIPHER ALGORITHM

Implement the encryption and decryption of symmetric cipher algorithm (AES and RC4)

Week 2: RANDOM NUMBER GENERATION

a) Design and implement a Random number generation algorithm using a subset of digits and alphabets.

b) Design and implement a Random number generation algorithm using a Subset-sum of numbers

Week 3: RSA ALGORITHM

- a) Implement RSA algorithm for encryption and decryption in C
- b) In an RSA System, the public key of a given user is e=31, n=3599.

Write a program to find the private key of the User.

Week 4: HASH ALGORITHMS

Calculate the message digest of a text using the SHA-1 and MD-5 algorithm

Week 5: WEB TRANSACTIONS

Implement a trusted secure web transaction

Week 6: DIGITAL SIGNATURE ALGORITHM

Implement the SIGNATURE SCHEME – Digital Signature Standard.

Week 7: DIFFIE-HELLMAN ALGORITHM

Implement the Diffie-Hellman Key Exchange algorithm

Week 8: CRYPTOSYSTEM

Implement of EIGAMAL cryptosystem.

Week-9: PUBLIC KEY SYSTEM

Implement of Goldwasser-Micali probabilistic public key system

Week 10: CRYPTOSYSTEM

Implement of Rabin Cryptosystem

Week 11: KERBEROS

Implementation of Kerberos cryptosystem

Week 12: FIREWALL IMPLEMENTATION

Configure a firewall to block the following for 5 minutes and verify the correctness of this system using the configured parameters:

- (a) Two neighborhood IP addresses on your LAN
- (b) All ICMP requests
- (c) All TCP SYN Packets.

Week 13: WIRESHARK

Install and analyze the network packets using Wireshark.

Week 14: PROBE ATTACKS

Write an algorithm to detect probe attacks in network flows.
