## INSTITUTE OF AERONAUTICAL ENGINEERING

(Autonomous)
Dundigal, Hyderabad - 500043
MECHANIAL ENGINEERING

DEFINITIONS AND TERMINOLOGY

| Course Name | $:$ | Mathematical Transform Techniques |
| :--- | :---: | :--- |
| Course Code | $:$ | AHS011 |
| Program | $:$ | B.Tech |
| Semester | $:$ | IV |
| Branch | $:$ | Mechanical Engineering |
| Section | $:$ | A,B |
| Academic Year | $:$ | 2018- 2019 |
| Course Faculty | $:$ | Ms. B Praveena Assistant Professor, FE <br> Ms. V.Subba Laxmi, Assistant Professor, FE |

OBJECTIVES

| I | To help students to consider in depth the terminology and nomenclature used in the syllabus. |
| :---: | :--- |
| II | To focus on the meaning of new words / terminology/nomenclature |

DEFINITIONS AND TERMINOLOGYQUESTION BANK

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| UNIT - I |  |  |  |  |  |
| 1 | Define Fourier Series | Fourier Series is an expansion of a periodic function in terms an infinite series of trigonometric functions which represents an expansion or approximation of a periodic function, used in Fourier analysis. | Remember | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 2 | Define Fourier Sine series | If $f(x)$ is an odd function, then the Fourier Half Range sine series of $f$ is defined to be $\begin{aligned} & f(x)=\sum_{n=1}^{\infty} b_{n} \sin \frac{n \pi x}{L} \\ & b_{n}=\frac{2}{L} \int_{0}^{L} f(x) \sin \frac{n \pi x}{L} d x, n \in \mathbb{N} \end{aligned}$ | Remember | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 3 | Define Fourier Cosine series | $f(x)=\frac{1}{2} a_{0}+\sum_{n=1}^{\infty} a_{n} \cos (n x)$ | Remember | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 4 | Define periodic signal | A signal is a periodic signal if it completes a pattern within a measurable time frame, called a period and repeats that pattern over identical subsequeperiods | Remember | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 4 | Define Dirichlet conditions | The Dirichlet conditions are sufficient conditions for a real-valued, periodic function $f$ to be equal to the sum of its Fourier series at each point where $f$ is continuous. Moreover, the behavior of the Fourier series at points of discontinuity is determined as well (it is the midpoint of the values of the discontinuity). | Understand | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 5 | When a function is said to absolutely Integrable? | An absolutely integrable function is a function whose absolute value is integrable, meaning that the integral of the absolute value over the whole domain is finite. | Understand | $\begin{gathered} \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 6 | Define continuous functions | In mathematics, a continuous function is a function for which sufficiently small changes in the input result in arbitrarily small changes in the output. Otherwise, a function is said to be a discontinuous function | Remember | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | Define discontinuous functions | If a function is not continuous at a point in its domain | Remember | $\begin{gathered} \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 8 | Write the definition of even function? | A function $\mathrm{f}(\mathrm{x})$ is said to be even $\mathrm{f}(-\mathrm{x})=\mathrm{f}(\mathrm{x})$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 9 | Write the definition of odd function? | A function $\mathrm{f}(\mathrm{x})$ is said to be even $\mathrm{f}(-\mathrm{x})=\mathrm{f}(\mathrm{x})$ | Understand | $\begin{gathered} \text { CLO } \\ 02 \end{gathered}$ | CAHS011.02 |
| 10 | Define half range Fourier series. | It is required to obtain furrier series of a function $f(x)$ in the interval (0,l) | Remember | $\begin{gathered} \text { CLO } \\ 02 \end{gathered}$ | CAHS011.02 |
| 12 | What are fourier coefficients? | $\mathrm{a}_{0}, \mathrm{a}_{\mathrm{n}}$ and $\mathrm{b}_{\mathrm{n}}$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 03 \\ \hline \end{gathered}$ | CAHS011.03 |
| 13 | What are the conditions for expansion of a function in Fourier series? | 1.f(x) is well defined, single valued functions 2.f(x) has a finite number of discontinuities. | Remember | $\begin{gathered} \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 14 | What is the value of sinx? | $\operatorname{Sin} \mathrm{x}=\sin (\mathrm{x}+2 \pi)=\sin \mathrm{x}$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 01 \end{gathered}$ | CAHS011.01 |
| 15 | What is Fourier Series in Mathematics? | Fourier series is an infinite series representation of a periodic function in terms sines and cosines. | Remember | CLO 1 | CAHS011.01 |
| 16 | Define Fourier series in the interval $\mathrm{c} \leq \mathrm{x} \leq \mathrm{c}+2 \pi$ | The Fourier series for the function $f(x)$ in the interval $c \leq x \leq c+2 \pi$ is given by $f(x)=\frac{a_{0}}{2}+\sum_{n=1}^{\infty}\left(a_{n} \cos n x+b_{n} \sin n x\right)$ <br> Where $\begin{aligned} & a_{0}=\frac{1}{\pi} \int_{c}^{c+2 \pi} f(x) d x \\ & a_{n}=\frac{1}{\pi} \int_{c}^{c+2 \pi} f(x) \cos n x d x \\ & b_{n}=\frac{1}{\pi} \int_{c}^{c+2 \pi} f(x) \sin n x d x \end{aligned}$ | Remember | CLO 1 | CAHS011.01 |
| 17 | What is the use of Fourier series? | Fourier series is used to solve ordinary and partial differential equations particularly with periodic functions appearing as non-homogeneous terms. | Remember | CLO 1 | CAHS011.01 |
| 18 | Define periodic function. | In mathematics, a periodic function is a function that repeats its values in regular intervals or periods. The most important examples are the trigonometric functions, which repeat over intervals of $2 \pi$ radians | Remember | CLO 1 | CAHS011.01 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 19 | What is the difference between Taylor's series and Fourier series? | Taylor's series expansion is valid only for functions which are continuous and differentiable. Fourier series is possible not only for continuous functions but also for periodic functions, functions which are discontinuous in their values and derivatives because of the periodic nature Fourier series constructed for one period is valid for all. | Remember | CLO 1 | CAHS011.01 |
| 20 | State Dirichlet conditions | A function $f(x)$ has a valid Fourier series expansion if $f(x)$ is well defined, periodic, single-valued and finite. $f(x)$ has finite number of finite discontinuities in any one period. $f(x)$ has finite number of finite maxima and minima in the interval of definition. | Understand | CLO 1 | CAHS011.01 |
| 21 | Where is Fourier Analysis used. | Fourier analysis is used in electronics, acoustics, and communications. Many waveforms consist of energy at a fundamental frequency and also at harmonic frequencies (multiples of the fundamental). | Understand | CLO 1 | CAHS011.01 |
| 22 | Discuss about the convergence of Fourier series. | Fourier series converges to $f(x)$ at all points where $f(x)$ is continuous. Also the series converges to the average of the left limit and right limit of $f(x)$ at each point of discontinuity of $f(x)$. | Understand | CLO 1 | CAHS011.01 |
| 23 | Define Fourier series in in [1,1]. | Let $f(x)$ be a function defined in $[-1,1]$ then the Fourier Series is given by $f(x)=\frac{a_{0}}{2}+\sum_{n=1}^{\infty}\left(a_{n} \cos \frac{n \pi x}{1}+b_{n} \sin \frac{n \pi x}{l}\right)$ <br> Where $\begin{aligned} & a_{0}=\frac{1}{1} \int_{-1}^{l} f(x) d x \\ & a_{n}=\frac{1}{1} \int_{-1}^{l} f(x) \cos \frac{n \pi x}{l} d x \\ & b_{n}=\frac{1}{1} \int_{-1}^{l} f(x) \sin \frac{n \pi x}{l} d x \end{aligned}$ | Remember | CLO 1 | CAHS011.01 |
| 24 | Define odd function . | A function $\mathrm{f}(\mathrm{x})$ is said to be even $\mathrm{f}(-\mathrm{x})=-\mathrm{f}(\mathrm{x})$ | Remember | CLO 2 | CAHS011.02 |
| 25 | Define half range sine series in $[0,1]$. | $\mathrm{f}(\mathrm{x})=\sum_{\mathrm{n}=1}^{\infty}\left(\mathrm{b}_{\mathrm{n}} \sin \frac{\mathrm{n} \pi \mathrm{x}}{\mathrm{l}}\right)$ <br> Where $\mathrm{b}_{\mathrm{n}}=\frac{2}{\mathrm{l}} \int_{0}^{\mathrm{l}} \mathrm{f}(\mathrm{x}) \sin \frac{\mathrm{n} \pi \mathrm{x}}{\mathrm{l}} \mathrm{dx}$ | Remember | CLO 3 | CAHS011.03 |
| 26 | State Fourier series for even function in $[-\pi, \pi]$. | When $f(x)$ is an even function $\begin{aligned} & \mathrm{f}(\mathrm{x})=\frac{\mathrm{a}_{0}}{2}+\sum_{\mathrm{n}=1}^{\infty} \mathrm{a}_{\mathrm{n}} \cos \mathrm{x} \\ & \text { Where } \quad \mathrm{a}_{0}=\frac{2}{\pi} \int_{0}^{\pi} \mathrm{f}(\mathrm{x}) \mathrm{dx} \end{aligned}$ | Understand | CLO 3 | CAHS011.03 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathrm{a}_{\mathrm{n}}=\frac{2}{\pi} \int_{0}^{\pi} \mathrm{f}(\mathrm{x}) \cos n \mathrm{xdx}$ |  |  |  |
| 27 | State Fourier series for odd function in $[-\pi, \pi]$. | When $f(x)$ is an Odd Function $f(x)=\sum_{n=1}^{\infty} b_{n} \sin n x$ <br> Where $b_{n}=\frac{2}{\pi} \int_{0}^{\pi} f(x) \sin n x d x$ | Remember | CLO 3 | CAHS011.03 |
| 28 | What is the period of $\sin 3 \mathrm{x}$ ? | The period of $\sin 3 x$ is $\frac{2 \pi}{3}$ | Understand | CLO 1 | CAHS011.01 |
| UNIT - II |  |  |  |  |  |
| 1 | Define Fourier integral transform. | Fourier Integral transforms are mathematical devices form which we obtain the solutions of boundary value problems related to Engineering.Example conduction of heat ,free and forced vibrations of a membrane ,tranverse vibrations of a string, tranverse oscillations of an elastic beam. | Remember | CLO 3 | CAHS011.03 |
| 2 | Define Fourier integral transform theorem. | If $f(x)$ is a given function defined in ( $-1,1$ ) and satisfies the Dirichlet conditions then $\mathrm{f}(\mathrm{x})=\frac{1}{\pi} \int_{0}^{\infty} \int_{-\infty}^{\infty} \mathrm{f}(\mathrm{t}) \cos \lambda(\mathrm{t}-\mathrm{x}) \mathrm{dtd} \lambda$ | Remember | CL0 5 | CAHS011.05 |
| 3 | State shifting property of Fourier transform. | If $F(p)$ is Fourier transform of $f(x)$ then the Fourier transform of $f(x-a)$ is $e^{i p a} f(p)$ | Understand | CLO 6 | CAHS011.06 |
| 4 | State change of scale property. | If $F(p)$ is Fourier transform of $f(x)$ then the Fourier transform of $f(a x)$ is $\frac{1}{a} f\left(\frac{p}{a}\right)$ | Understand | CLO 6 | CAHS011.06 |
| 5 | State Modulation theorem. | If $F(p)$ is Fourier transform of $f(x)$ then the Fourier transform of $f(x) \operatorname{cosax}$ is $\frac{1}{2}[F(p+a)+F(p+a)]$ | Understand | CLO 4 | CAHS011.04 |
| 6 | State Linearity property of Fourier transform. | If $F(p)$ and $G(p)$ are Fourier transform of $f(x)$ and $g(x)$ respectively then $\mathrm{F}[\mathrm{af}(\mathrm{x})+\mathrm{bg}(\mathrm{x})]=\mathrm{aF}(\mathrm{p})+\mathrm{bG}(\mathrm{P})$ | Understand | CLO 6 | CAHS011.06 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | Define Fourier transform and inverse Fourier transform. | The Fourier transform and inverse transform are $\begin{aligned} & \mathrm{F}(\mathrm{~s})=\int_{-\infty}^{\infty} \mathrm{f}(\mathrm{t}) \mathrm{e}^{\mathrm{ist}} \mathrm{dt} \\ & \mathrm{f}(\mathrm{x})=\frac{1}{2 \pi} \int_{-\infty}^{\infty} \mathrm{F}(\mathrm{~s}) \mathrm{e}^{-\mathrm{isx}} \mathrm{ds} \end{aligned}$ | Remember | CLO 7 | CAHS011.07 |
| 8 | Define Fourier cosine integral. | If $\mathrm{f}(\mathrm{t})$ is an even function $\mathrm{f}(\mathrm{x})=\frac{2}{\pi} \int_{0}^{\infty} \cos \lambda \mathrm{x} \int_{0}^{\infty} \mathrm{f}(\mathrm{t}) \cos \lambda \mathrm{tdtd} \lambda \text { Fourier cosine integral. }$ | Remember | CLO 5 | CAHS011.05 |
| 9 | State conditions. | A function $\mathrm{f}(\mathrm{x})$ is said to satisfy Dirichlet's conditions in the interval $(a, b)$ if <br> $f(x)$ defined and is single valued function except possibly at a finite number of points in the interval $(a, b)$ <br> $f(x)$ and $f^{1}(x)$ are piecewise continuous in (a,b) | Understand | CLO 6 | CAHS011.06 |
| 10 | Define Fourier Sine <br> Integral   | If $f(t)$ is an odd function $\mathrm{f}(\mathrm{x})=\frac{2}{\pi} \int_{0}^{\infty} \sin \lambda \mathrm{x} \int_{0}^{\infty} \mathrm{f}(\mathrm{t}) \sin \lambda \mathrm{tdtd} \lambda$ is known Fourier Sine Integral | Remember | CLO 5 | CAHS011.05 |
| 11 | Define Fourier cosine integral. | If $\mathrm{f}(\mathrm{t})$ is an even function $\mathrm{f}(\mathrm{x})=\frac{2}{\pi} \int_{0}^{\infty} \cos \lambda \mathrm{x} \int_{0}^{\infty} \mathrm{f}(\mathrm{t}) \cos \lambda \mathrm{tdtd} \lambda$ <br> Fourier cosine integral. | Remember | CLO 6 | CAHS011.06 |
| 12 | Define Fourier transforms | The Fourier transforms (FT) decomposes a function of time (a signal) into the frequencies that make it up, in a way similar to how a musical chord can be expressed as the frequencies (or pitches) of its constituent notes. | Remember | $\begin{gathered} \hline \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 13 | Define Fourier integral transforms | Fourier integral is a pair of integrals--a "lower fourier integral" and an "upper fourier integral"--which allow certain complex-valued functions $f$ to | Remember | $\begin{gathered} \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | be decomposed as the sum of integral-defined functions, each of which resembles the usual fourier integral associated to $f$. |  |  |  |
| 14 | Define fourier sine transforms. | the fourier sine transform is the imaginary part of the full complex fourier transform. | Remember | $\begin{gathered} \hline \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 15 | Define Fourier cosine transforms. | The Fourier cosine transform is the areal part of the full complex Fourier transform. | Remember | $\begin{gathered} \hline \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 16 | Define inverse Fourier transforms | A mathematical operation that transforms a function for a discrete or continuous spectrum into a function for the amplitude with the given spectrum; an inverse transform of the Fourier transform | Remember | $\begin{gathered} \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 17 | Why to we need Fourier transforms | A complicated signal can be broken down into simple waves. This break down, and how much of each wave is needed, is the Fourier Transform. Fourier transforms (FT) take a signal and express it in terms of the frequencies of the waves that make up that signal. | Understand | $\begin{gathered} \hline \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 18 | What is difference between Fourier series and Fourier transform? | The Fourier series is used to represent a periodic function by a discrete sum of complex exponentials, while the Fourier transform is then used to represent a general, non periodic function by a continuous superposition or integral of complex exponentials. | Understand | $\begin{gathered} \hline \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 19 | Define piece wise continuous functions | In mathematics, a piecewise-defined function (also called a piecewise function or a hybrid function) is a function defined by multiple subfunctions, each sub-function applying to a certain interval of the main function's domain, a sub-domain | Remember | $\begin{gathered} \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 20 | How to represent Fourier transforms of function $\mathrm{F}(\mathrm{s})$. | Fourier transforms of function $\mathrm{F}(\mathrm{s})$ is defined by Fourier transforms of function $\mathrm{F}(\mathrm{s})$ $F(s) \equiv \int_{-\infty}^{\infty} f(x) e^{-2 \pi i s x} d x$ | Understand | $\begin{gathered} \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| 21 | How to represent Fourier transforms of function $\mathrm{f}(\mathrm{x})$ | $f(x) \equiv \int_{-\infty}^{\infty} F(s) e^{2 \pi i s x} d s$ | Understand | $\begin{gathered} \text { CLO } \\ 03 \end{gathered}$ | CAHS011.03 |
| UNIT - III |  |  |  |  |  |
| 1 | What is Laplace transform? | Laplace transform is a tool for engineers and scientist because these transforms provide easy and powerful means of solving differential equations. | Remember | CLO 9 | CAHS011.09 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | What is the importance of Laplace transform? | Laplace transform directly provide the solution of initial value problems or boundary value problems without finding the general solution differential equations. | Understand | CLO 9 | CAHS011.09 |
| 3 | State the conditions for existence of Laplace Transform. | The Laplace Transform of $\mathrm{f}(\mathrm{t})$ is said to exist if the integral $\int_{0}^{\infty} e^{-s t} f(t) d t$ converges for some value of s ,otherwise it does not exist. | Remember | CLO 9 | CAHS011.09 |
| 4 | What is inverse Laplace transform. | If $\bar{f}(s)$ is the Laplace Transform of a function $\mathrm{f}(\mathrm{t})$ then $\mathrm{f}(\mathrm{t})$ is called inverse Laplace transform of $\bar{f}(s)$ | Understand | CLO 9 | CAHS011.09 |
| 5 | State first translation theorem | Laplace transform of a function $\mathrm{f}(\mathrm{t})$ is multiplied by $\mathrm{e}^{\text {at }}$ then changes to be made from s to s -a in resulting $\mathrm{L}[\mathrm{f}(\mathrm{t})]$ | Understand | CLO 9 | CAHS011.09 |
| 6 | Define HeavisideUnit step function | The unit step function is defined as $u(t-a)$ if $t<a$ the value is 0 and $t>a$ the value is 1 | Remember | CLO 9 | CAHS011.09 |
| 7 | What is the Laplace transform of 1 | The laplace transform of 1 is $\frac{1}{s}$ | Understand | CLO 9 | CAHS011.09 |
| 8 | What is the Laplace transform of $\mathrm{f}^{\prime}(\mathrm{t})$ | $\mathrm{L}\left[\mathrm{f}^{\prime}(\mathrm{t})\right]=\mathrm{sL}[\mathrm{f}(\mathrm{t})]-\mathrm{f}(0)$ | Remember | CLO 9 | CAHS011.09 |
| 9 | What is Laplace transform of $\mathrm{e}^{\mathrm{at}}$ | Laplace transform of $\mathrm{e}^{\text {at }}$ is $\frac{1}{s-a}$ | Remember | CLO 9 | CAHS011.09 |
| 10 | Describe Laplace transform of integrals | The whole $\mathrm{L}[\mathrm{f}(\mathrm{t})]$ is divided by s | Remember | CLO 9 | CAHS011.09 |
| 12 | What is Laplace transform of \{tsinat $\}$ | Laplace transform of 2as | Understand | CLO 9 | CAHS011.09 |
| 13 | Define periodic function | A function $f(t)$ is said to be periodic iff $f(t+T)=f(t)$ | Remember | CLO 9 | CAHS011.09 |
| 14 | Define inverse Laplace transform | If $f(s)$ is the Laplace transform of a function $f(t)$ then $f(t)$ is called the inverse Laplace transform of $\mathrm{f}(\mathrm{s})$ | Remember | CLO 9 | CAHS011.09 |
| 15 | State use of partial fractions in finding inverse Laplace transform | If $f(s)$ is $g(s) / h(s)$ where $g$ and $h$ are polynomials in $s$ then $f(t)$ is obtained by resolving $\mathrm{f}(\mathrm{s})$ into partial fractions and manipulating term by term. | Understand | CLO 9 | CAHS011.09 |
| 16 | Define convolution theorem | $\mathrm{f}(\mathrm{t})^{*} \mathrm{~g}(\mathrm{t})$ is equal to integrating with respect to u from 0 to $t$ of $f(u) g(t-u)$ | Remember | CLO 9 | CAHS011.09 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 17 | Define Laplace transform | Laplace transform of a function $f(t)$ is $f(t)$ is multiplied by $e^{-s t}$ and integrating from 0 to $\infty$ | Remember | $\begin{gathered} \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |
| 18 | State sufficient conditions for the existence of Laplace transform of a function | The function $\mathrm{f}(\mathrm{t})$ must be piece-wise continuous in any limited interval and the function is of exponential order | Understand | $\begin{gathered} \hline \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |
| 19 | State piece-wise continuous function | A function $f(t)$ is said to be piece-wise continuous over the closed interval [a,b] if it is divided into a finite number of subintervals where $f(t)$ is continuous and has right and left hand limits at every end point of the subinterval | Understand | $\begin{gathered} \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |
| 20 | State Linearity property | Laplace transform of the sum of two or more functions of $t$ is the sum of the Laplace transforms of the separate functions | Understand | $\begin{gathered} \hline \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 21 | State first shifting theorem | Laplace transform of a function $f(t)$ is multiplied by $e^{\text {at }}$ then changes to be made from s to s -a in resulting $\mathrm{L}[\mathrm{f}(\mathrm{t})]$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 22 | Define Unit step function | The unit step function is defined as $u(t-a)$ if $t<a$ the value is 0 and $t>a$ the value is 1 | Remember | $\begin{gathered} \hline \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 23 | State change of scale property | $\mathrm{L}[\mathrm{f}(\mathrm{at})]$ is finding Laplace transform of function $\mathrm{f}(\mathrm{t})$ where changes to be made $s$ to $s / a$, the whole is multiplied by $1 / a$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 24 | Define Laplace transform of derivatives | If $f(t)$ is continuous and of exponential order, and $f^{\prime}(t)$ is sectionally continuous then the $\mathrm{L}[\mathrm{f}(\mathrm{t})]=\mathrm{L}[\mathrm{f}(\mathrm{t})]-\mathrm{f}(0)$ | Remember | $\begin{gathered} \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 25 | Define Laplace transform of $\mathrm{t}^{\mathrm{n}}$ $\mathrm{f}(\mathrm{t})$ | Laplace transform of $\mathrm{t}^{\mathrm{n}} \mathrm{f}(\mathrm{t})$ is $(-1)^{\mathrm{n}}$ is multiplied by $\mathrm{n}^{\text {th }}$ derivative of $\mathrm{L}[\mathrm{f}(\mathrm{t})]$ | Remember | $\begin{gathered} \hline \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |
| 26 | Define Laplace transform of integrals | The whole $\mathrm{L}[\mathrm{f}(\mathrm{t})]$ is devided by s | Remember | $\begin{gathered} \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 27 | State Laplace transform of Dirac delta function | Laplace transform of Dirac delta function is $\mathrm{e}^{-\mathrm{as}}$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 28 | Define periodic function | A function $f(t)$ is said to be periodic iff $f(t+T)=f(t)$ | Remember | $\begin{gathered} \hline \text { CLO } \\ 09 \\ \hline \end{gathered}$ | CAHS011.09 |
| 29 | Define inverse Laplace transform | If $f(s)$ is the Laplace transform of a function $f(t)$ then $f(t)$ is called the inverse Laplace transform of $f(s)$ | Remember | $\begin{gathered} \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |
| 30 | State use of partial fractions in finding inverse Laplace transform | If $f(s)$ is $g(s) / h(s)$ where $g$ and $h$ are polynomials in $s$ then $f(t)$ is obtained by resolving $\mathrm{f}(\mathrm{s})$ into partial fractions and manipulating term by term | Understand | $\begin{gathered} \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |
| 31 | Define convolution theorem | $\mathrm{f}(\mathrm{t})^{*} \mathrm{~g}(\mathrm{t})$ is equal to integrating with respect to $u$ from 0 to $t$ of $f(u) g(t-u)$ | Remember | $\begin{gathered} \hline \text { CLO } \\ 09 \end{gathered}$ | CAHS011.09 |

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| UNIT - IV |  |  |  |  |  |
| 1 | Define z-transform. | Consider a function $f(n)$ defined for $n=1,2,3 \ldots$ then the $z$ - transform of $f(n)$ is defined as $\mathrm{Z}[\mathrm{f}(\mathrm{n})]=\sum_{n=0}^{\infty} f(n) z^{-n}$ | Remember | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 2 | Describe inverse z-transform. | The inverse z-transform of $\mathrm{F}(\mathrm{z})$ is defined as $\mathrm{Z}^{-1}[F(z)]=f(n)$ | Remember | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 3 | Explain about the importance of z-transform. | The z-transform is useful in solving difference equations. It is used extensively today in the areas of applied mathematics, digital signal processing, control theory, population science, economics. | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 4 | State linearity property of ztransform | $\mathrm{a}, \mathrm{b}$ are any constants and $\mathrm{f}(\mathrm{n})$ and $\mathrm{g}(\mathrm{n})$ be any discrete functions then $Z[\operatorname{af}(n)+b g(n)]=a Z[f(n)]+b Z[g(n)]$. | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 5 | E xplain change of scale property of z-transform. | If $\mathrm{Z}[\mathrm{f}(\mathrm{n})]=\mathrm{F}(\mathrm{z})$ then $\mathrm{Z}\left[a^{-n} f(n)\right]=F(a z)$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 6 | State Initial value theorem of z-transform | If $\mathrm{Z}[\mathrm{f}(\mathrm{n})]=\mathrm{F}(\mathrm{z})$ then $\operatorname{Lt~}_{\mathrm{z} \rightarrow \infty} \mathrm{F}(\mathrm{z})=\mathrm{f}(0)$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 7 | State Final value theorem of z-transform. | If $\mathrm{Z}[\mathrm{f}(\mathrm{n})]=\mathrm{F}(\mathrm{z})$ then $\operatorname{Lt}_{\mathrm{n} \rightarrow \infty} \mathrm{~F}(\mathrm{n})=\operatorname{Lt}_{\mathrm{z} \rightarrow 1}(\mathrm{z}-1) \mathrm{F}(\mathrm{z})$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 8 | State multiplication by $n$ of Z- transform. | If $\mathrm{Z}[\mathrm{f}(\mathrm{n})]=\mathrm{F}(\mathrm{z})$ then $\mathrm{Z}[n f(n)]=-z \frac{d}{d z} F(z)$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 9 | State division by n of Ztransform | If $\mathrm{Z}[\mathrm{f}(\mathrm{n})]=\mathrm{F}(\mathrm{z})$ then $Z\left[\frac{f(n)}{n}\right]=-\int\left[\frac{F(z)}{z}\right] d z$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 10 | State convolution theorem of Z- transform. | $\begin{aligned} & Z^{-1}[F(z)]=f(n) \text { and } Z^{-1}[G(z)]=g(n) \\ & Z^{-1}[F(z) \cdot G(z)]=f(n)^{*} g(n)= \\ & \sum_{m=0}^{n} f(m) g(n-m) \end{aligned}$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 11 | What is the Z-transform of unit impulse function? | The Z-transform of unit impulse function is $\frac{\mathrm{z}}{\mathrm{z}-1}$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |

$\mathbf{1 0 | P a g e}$

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 12 | State shifting property to the right. | $\begin{aligned} & \text { If } \mathrm{Z}[\mathrm{f}(\mathrm{n})]=\mathrm{F}(\mathrm{z}) \text { then } \mathrm{Z}[\mathrm{f}(\mathrm{n}-\mathrm{k})]= \\ & \mathrm{Z}^{-\mathrm{k}} \mathrm{~F}(\mathrm{z}) \text {. } \end{aligned}$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 13 | What is the Z-transform of $\mathrm{a}^{\mathrm{n}}$ | The Z-transform of $\mathrm{a}^{\mathrm{n}}$ is $\frac{\mathrm{z}}{\mathrm{z}-\mathrm{a}}$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 14 | What is the inverse Ztransform of $\frac{4 a}{z-a}$ | The inverse Z-transform of $\frac{4 a}{z-a}$ is $4 a^{n}$ | Understand | $\begin{gathered} \hline \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| 15 | What is the Z-transform of unit impulse function? | The Z-transform of unit impulse function is $\frac{\mathrm{z}}{\mathrm{z}-1}$ | Understand | $\begin{gathered} \text { CLO } \\ 13 \end{gathered}$ | CAHS011.13 |
| UNIT - V |  |  |  |  |  |
| 1 | Describe partial differential equation | A differential equation which involves partial derivatives is called a partial differential equation. | Remember | $\begin{gathered} \text { CLO } \\ 17 \\ \hline \end{gathered}$ | CAHS011.17 |
| 2 | What is the order of partial differential equation | The order of partial differential equation is the highest partial derivative appearing in the equation . | Remember | $\begin{gathered} \hline \text { CLO } \\ 17 \\ \hline \end{gathered}$ | CAHS011.17 |
| 3 | What is the degree of partial differential equation | Degree of partial differential equation is the highest order derivative. | Remember | $\begin{gathered} \hline \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 4 | Explain the formation of partial differential equation | partial differential equation is formed either by the elimination of arbitrary constants or by the elimination of arbitrary functions from a relation involving three or more variables. | Understand | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 5 | Explain the rule of PDE to be of first order | If the number of constants to be eliminated is equal to the number of independent variables the derived PDE is of first order. | Understand | $\begin{gathered} \hline \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 6 | Describe rule of PDE to be of second or higher order | If the number of constants to be eliminated is greater than the number of independent variables then the elimination of the constants will give rise to a PDE is of second or higher order. | Understand | $\begin{gathered} \hline \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 7 | State Lagrange's linear equation. | A linear PDE of order one, involving a dependent variable z and two independent variables $x$ and $y$ of the form $P p+Q q=R$ where $P, Q, R$ are functions of $x, y, z$ is called Lagrange's linear equation. | Remember | $\begin{gathered} \hline \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 8 | Describe non-linear partial differential equation. | A PDE which involves first order partial derivatives $p$ and $q$ with degree higher than one and the products of p and q is called a non-linear partial differential equation. | Remember | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 9 | Describe complete integral. | A solution in which the number of arbitrary constants is equal to the number of independent variables is called complete integral. | Remember | $\begin{gathered} \hline \text { CLO } \\ 17 \\ \hline \end{gathered}$ | CAHS011.17 |

$\mathbf{1 1 | P a g e}$

| S No | QUESTION | ANSWER | Blooms Level | CLO | CLO Code |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 10 | Explain e particular integral | A solution obtained by giving particular values to the arbitrary constants in the complete integral is called a particular integral | Remember | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 11 | Describe singular integral | The method of solving a non -linear PDE $f(x, y, z, p, q)=0$ is called | Remember | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 12 | Define Charpit's Method. | The method of solving a non -linear PDE $f(x, y, z, p, q)=0$ is called Charpit's Method. | Remember | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.17 |
| 13 | State standard form I. | Equations of the form $\mathrm{f}(\mathrm{p}, \mathrm{q})=0$ that is equations containing p and q only. | Remember | $\begin{gathered} \mathrm{CLO} \\ 17 \end{gathered}$ | CAHS011.18 |
| 14 | State standard form II. | Equations of the form $\mathrm{f}(\mathrm{z}, \mathrm{p}, \mathrm{q})=0$ that is equations not containing x and y only. | Remember | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.18 |
| 15 | State standard form III. | Equations of the form $\mathrm{f} 1(\mathrm{x}, \mathrm{p})=\mathrm{f} 2(\mathrm{y}, \mathrm{q})$ that is equations not involving z and the terms containing $x$ and $p$ can be separated from those containing and $y$ and y . | Remember | $\begin{gathered} \text { CLO } \\ 17 \end{gathered}$ | CAHS011.18 |
