<p>I. COURSE OVERVIEW: Masonry structures constitute approximately 85% of the built stock in a developing country such as India; however, a vast majority of this is non-engineered or semi-engineered constructions demonstrating poor performance, particularly under earthquake actions. The current course aims at elucidating theories on mechanical behaviour of masonry assemblages under different actions, and introduces students to working stress and limit state approaches to analysis and design of unreinforced, reinforced, confined masonry structures for gravity and lateral loads, including earthquake loads. The course will also briefly address behaviour of masonry infill walls and procedures for structural assessment and strengthening of existing masonry structures. Students who undertake this course will have an understanding of behavior of structural masonry under different loads, and be able to estimate capacities and design masonry walls and systems.</p> <p>II. COURSE OBJECTIVES: The student will try to learn:</p> <ol style="list-style-type: none"> I. Structural analysis of load bearing brick and block masonry. II. Structural design of walls, columns and beams in unreinforced and reinforced masonry. III. Application of simple structural models for calculation and design of building parts and detailing. <p>III. COURSE OUTCOMES:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="3" style="text-align: left; padding: 5px;">After successful completion of the course, students should be able to:</th> </tr> </thead> <tbody> <tr> <td style="width: 10%; text-align: center;">CO 1</td> <td style="width: 70%;">Describe about masonry construction</td> <td style="width: 20%; text-align: center;">Understand</td> </tr> <tr> <td style="text-align: center;">CO 2</td> <td>Assess the strength and stability of masonry walls</td> <td style="text-align: center;">Evaluate</td> </tr> <tr> <td style="text-align: center;">CO 3</td> <td>Identify the various interactions involved in structural elements</td> <td style="text-align: center;">Apply</td> </tr> <tr> <td style="text-align: center;">CO 4</td> <td>Describe the effect of curing, ageing and workmanship of a masonry wall</td> <td style="text-align: center;">Understand</td> </tr> <tr> <td style="text-align: center;">CO 5</td> <td>Explain the design aspects of reinforced masonry</td> <td style="text-align: center;">Understand</td> </tr> <tr> <td style="text-align: center;">CO 6</td> <td>Make use of various model techniques for analyzing the components</td> <td style="text-align: center;">Apply</td> </tr> </tbody> </table> <p>IV. SYLLABUS: MODULE-I: INTRODUCTION (09) Historical Perspective, Masonry Materials, Masonry Design Approaches, Overview of Load Conditions, Compression Behaviour of Masonry, Masonry Wall Configurations, Distribution of Lateral Forces</p> <p>MODULE-II: FLEXURAL STRENGTH (09) Flexural Strength of Reinforced Masonry Members: In plane and Out-of-plane Loading. Shear Strength and Ductility of Reinforced Masonry Members</p>									After successful completion of the course, students should be able to:			CO 1	Describe about masonry construction	Understand	CO 2	Assess the strength and stability of masonry walls	Evaluate	CO 3	Identify the various interactions involved in structural elements	Apply	CO 4	Describe the effect of curing, ageing and workmanship of a masonry wall	Understand	CO 5	Explain the design aspects of reinforced masonry	Understand	CO 6	Make use of various model techniques for analyzing the components	Apply
After successful completion of the course, students should be able to:																													
CO 1	Describe about masonry construction	Understand																											
CO 2	Assess the strength and stability of masonry walls	Evaluate																											
CO 3	Identify the various interactions involved in structural elements	Apply																											
CO 4	Describe the effect of curing, ageing and workmanship of a masonry wall	Understand																											
CO 5	Explain the design aspects of reinforced masonry	Understand																											
CO 6	Make use of various model techniques for analyzing the components	Apply																											

MODULE-III: INTERACTIONS (09)

Structural Wall, Columns and Pilasters, behavior of axially loaded columns, axial strength of reinforced masonry columns.

Retaining Wall, principal types of retaining walls, lateral pressures on retaining walls, external stability of a retaining wall, Pier and Foundation

MODULE-IV: PRESTRESSED MASONRY (09)

Stability of Walls, Coupling of Masonry Walls, Openings, Columns, Beams.

MODULE-V: ELASTIC AND INELASTIC ANALYSIS (09)

Modeling Techniques, Static Push Over Analysis and use of Capacity Design Spectra.

V. TEXT BOOKS:

1. Narendra Taly, "Design of Reinforced Masonry Structures", ICC, 2nd Edition, 2010.
2. Hamid Ahmad A. and Drysdale Robert.G., "Masonry Structures: Behavior and Design", 1994.
3. Mechanics of Masonry Structures, Editor: Maurizio Angelillo, 2014.
