# TARE NO LIBERTY

## **INSTITUTE OF AERONAUTICAL ENGINEERING**

(Autonomous)

Dundigal, Hyderabad - 500 043

#### **MECHANICAL ENGINEERING**

#### **DEFINITIONS AND TERMINOLOGY QUESTION BANK**

Course Name	:	ROBOTICS
Course Code	:	AME533
Program	:	B.Tech
Semester	:	VI
Branch	:	Mechanical Engineering
Section	:	A & B
Academic Year	:	2019 – 2020
Course Faculty	:	Mr. A Anudeep Kumar, Assistant Professor

#### **COURSE OBJECTIVES:**

The	The course should enable the students to:						
Ι	Develop the knowledge in various robot structures and their workspace.						
II	Develop the skills in performing kinematics analysis of robot systems.						
III	Provide the knowledge of the dynamics associated with the operation of robotic systems.						
IV	Provide the knowledge and analysis skills associated with trajectory planning.						
V	Understand material handling and robot applications in industries.						

#### **COURSE OUTCOMES:**

CO 1	Understand characteristic features of robots and usage of different grippers for industrial applications.
CO 2	Understand direct and inverse kinematics of robot structure.
CO 3	Illustrate Differential Kinematics of planar and spherical manipulators.
CO 4	Understand classification of robot actuators and trajectory planning.
CO 5	Remember material handling and applications in manufacturing.

### DEFINITIONS AND TERMINOLOGY QUESTION BANK

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
		UNIT-I				
1	Define Automation.	Automation is the technology by which a process or procedure is accomplished without human assistance.	Understand	CO 1	CLO 1	AME533.01
2	Define Fixed Automation.	Fixed automation is a system in which the sequence of processing (or assembly)	Remember	CO 1	CLO 2	AME533.02

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
		operations is fixed by the equipment configuration. Each of the operations in the sequence is usually simple, involving perhaps a plain linear or rotational motion or an uncomplicated combination of the two.				
3	Explain Programmable Automation.	In programmable automation the production equipment is designed with the capability to change the sequence of operations to accommodate different product configuration. The operation sequence is controlled by a program, which is a set of instructions coded so that they can be read and interpreted by the system.	Remember	CO 1	CLO 2	AME533.02
4	Define Flexible Automation.	Flexible automation is an extension of programmable automation. A flexible automated system is capable of producing a variety of parts (or products) with virtually no time lost for changeovers from one part style to the next. There is no lost production time while reprogramming the system and altering the physical setup (tooting, fixtures, machine	Remember	CO 1	CLO 1	AME533.01
5	Define the term Robot.	settings).  "A programmable multifunctional manipulator designed to move material, parts, or specialized devices through variable programmed motions for the performance of a variety of tasks."	Remember	CO 1	CLO 4	AME533.04
6	Define Articulated Robot.	An Articulated robot can be defined as a robot with rotary joint and these robots can range from simple two-jointed structures to systems with 10 or more interacting joints.	Remember	CO 1	CLO 4	AME533.04
7	Define Anthropomorphis m.	Anthropomorphism is a phenomenon that describes the human tendency to see human-like shapes in the environment.	Remember	CO 1	CLO 1	AME533.01
8	What is Humanoid robot?	Humanoid robot is a robot with its body shape built to resemble the human body. The design may be for functional purposes, such as interacting with human tools and environments, for experimental purposes, such as the study of bipedal locomotion, or for other purposes.	Remember	CO 1	CLO 1	AME533.01

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
9	What is PTP	Point-to-point (PTP) control	Remember	CO 1	CLO 3	AME533.03
	control robot.	robot: is capable of moving from one point to another point.				
		The locations are recorded in the				
		control memory.				
10	Define CP	Continuous-path (CP) control	Remember	CO 1	CLO 3	AME533.03
	control Robot.	robot: with CP control, the robot				
		can stop at any specified point along the controlled path.				
11	Define controlled	Controlled-path robot: the	Remember	CO 1	CLO 3	AME533.03
	path robot.	control equipment can generate				
		paths of different geometry such				
		as straight lines, circles, and interpolated curves with a high		_		
		degree of accuracy.				
12	Describe	Controller is much like the	Remember	CO 1	CLO 3	AME533.03
	controller.	human brain which coordinates				
		the muscles and all other parts				
		of the body. It keeps track of time, the position of the joints,				
		and the movements of the				
		manipulator. It does this as per				
		programme and with a list of				
		instructions. The instructions are				
		stored in the memory unit of controller.				
13	What is a	The manipulator in the present	Understand	CO 1	CLO 3	AME533.03
	manipulator?	case is the entire mechanism of	Shacistana	001	CLO 3	11112333.03
	1	the robot that provides				
		movement of any degree of				
		freedom. Therefore it consists of				
14	Define Gripper.	base, arm and gripper.  The gripper is similar to the	Remember	CO 1	CLO 4	AME533.04
	JFF	human hand. Just as the hand				
	0	grasps the tool to perform the	. 10	-7		)
		work, the gripper secures the		_	-	
		robot's work piece while the operation is being performed.		7	1	
		The shape of the gripper is				
		determined by the task it has to			100	
		perform.	_	# C		
15	Define end effector.	In the robotic world it is	Remember	CO 1	CLO 4	AME533.04
	effector.	generally understood that the end of the wrist is the end of the		, "		
		robot. The end effector is the	1 7 7 3			
		correct name for the attachment				
		that can be mounted to a bolting	=			
		plate fitted to the wrist				
		UNIT-II				
1	What is rotation	Rotation matrix describes the	Remember	CO 2	CLO 5	AME533.05
	matrix?	mutual orientation between two				
		coordinate frames; its column vectors are the direction cosines				
		of the axes of the rotated frame				
		with respect to the original				
		frame. It represents the				
		coordinate transformation				
		between the coordinates of a			1	

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
		point expressed in two different				
		frames (with common origin).				
2	Define	Kinematics pertains to the	Remember	CO 2	CLO 6	AME533.06
	kinematics of	motion of bodies in a robotic				
	robotics	mechanism				
		without regard to the				
		forces/torques that cause the motion. Since robotic				
		mechanisms are by their very essence designed for motion,				
3	Define	Most generally, the workspace	Understand	CO 2	CLO 7	AME533.07
3	workspace or	of a robotic manipulator is the	Chacistana	CO 2	CLO /	AMESSS.07
	work envelope.	total				
	work chivelope.	volume swept out by the end-	and the same of th			
		effector as the manipulator				
		executes all possible motions.				
		The workspace is determined by				
		the geometry of the manipulator				
4	Describe forward	The forward kinematics of	Understand	CO 2	CLO 8	AME533.08
	kinematics.	manipulator is to find the				
		position and orientation of the				
		end-effector relative to the base				
		given the positions of all of the				
		joints and the values of all of the				
		geometric link parameters.				
5	Describe inverse	The inverse kinematics	Understand	CO 2	CLO 8	AME533.08
	kinematics.	manipulator is to find the values				
		of the joint positions given the				
		position and orientation of the				
		end- effector relative to the base				
		and the values of all of the				
		geometric link parameters.		~~~	GT 0 7	
6	Define DH	The DH parameters were first	Remember	CO 2	CLO 5	AME533.05
	notation or	appeared in 1955 to represent a	400		-	
	Parameters.	directed line which is nothing				)
7	What is world	but the axis of a lower pair joint.	D h	CO 2	CLOC	A ME 522 06
7		World coordinate system is a	Remember	CO 2	CLO 6	AME533.06
	coordinate	coordinate system whose origin				
	system?	is specified by a user. This			700	
		system enables multiple robots to use a common coordinate				
		system for position				
		designation. By setting the		~		
		origin of the facilities to that of				
		the world coordinate system,	1 1 1 1			
		you can set positions of different	100			
		robots on the same coordinate				
		system.				
8	What is joint	Joint coordinate system Joint	Remember	CO 2	CLO 7	AME533.07
	coordinate	coordinates specify the location				
	system?	of each axis in encoder counts.				
		When the axes move, the optical				
		encoders generate a series of				
		alternating high and low				
		electrical				
		signals. The number of signals is				
		proportional to the amount of				
		axis motion; the controller				
		counts the signals and				
		determines how				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
9	What is DC servo	far an axis has moved.  The motor which is used as a	Remember	CO 2	CLO 8	AME533.08
	motor ?	DC servo motor generally have	Remember	202	CLO	7 HVILLJJJ.00
		a separate DC source in the field				
		of winding & armature winding. The control can be archived				
		either by controlling the				
10	XXXI	armature current or field current	<i>p</i> 1	GO 2	CI O T	11/5522.05
10	What is stepper motor ?	A stepper motor is just another digital device, more precisely	Remember	CO 2	CLO 5	AME533.05
	motor:	a digital DC motor. Stepper or				
		Stepper Motor allows you to				
		select				
11	What is position sensor?	A position sensor is any device that permits position	Remember	CO 2	CLO 6	AME533.06
	Selisor?	measurement. It can either be an	Account to		4	
		absolute position sensor or a				
		relative one position sensors can				
12	What is	be linear, angular, or multi-axis.  A potentiometric sensor is a	Remember	CO 2	CLO 7	AME533.07
12	potentiometric	type of chemical sensor that	remember	202	CEO ,	THVILLUSS.O7
	sensor?	may be used to determine the				
		analytical concentration of some components of the analyze gas				
		or solution. These sensors				
		measure the electrical potential				
		of an electrode when no voltage				
13	Explain resolver?	is present.  A resolver is a type of rotary	Remember	CO 2	CLO 8	AME533.08
	1	electrical transformer used for				
14	Explain encoder?	measuring degrees of rotation.  An encoder is a device, circuit,	Remember	CO 2	CLO 5	AME533.05
14	Explain encoder?	transducer, software program,	Kemember	CO 2	CLO 3	AMESSS.0S
	-	algorithm or person that	4	-37	-	
		converts information from one				2
	C	format or code to another, for the purpose of standardization,			1	
	0	speed or compression.				
15	What is velocity	A velocity or speed sensor	Remember	CO 2	CLO 6	AME533.06
	sensor?	measures consecutive position measurements at known		Q		
		intervals and computes the time		8		
		rate of change in the position		, "		
		values.				
		UNIT-III				
1	What is	Differential Kinematics is the	Understand	CO 3	CLO 09	AME533.09
	differential	relations between motion				
	kinematics?	(velocity) in joint space and motion (linear/angular velocity)				
		in task space				
2	What is Jacobian	Each column of the Jacobian	Remember	CO 3	CLO 10	AME533.10
	matrix?	matrix defines the effect of the i- th joint on the end-effector				
		velocity and it is divided in two				
		terms. The first term considers				
		the effect of on the linear velocity v, while the second one				
		on the rotational velocity				
		· · · · · · · · · · · · · · · · · · ·				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
3	What is robot	robot's dynamics provide a	Remember	CO 3	CLO 11	AME533.11
	dynamics?	description of why things move				
		when forces are generated in and applied on the system				
4	Define principle	Principle of Virtual Work A	Remember	CO 3	CLO 12	AME533.12
	of virtual work?	fundamental principle in	Remember	CO 3	CLO 12	7 HVIL555.12
		mechanics is the principle of				
		virtual work which describes the				
		fact that configuration				
		constraints actually define forces which do not perform				
		work in the direction of the				
		virtual displacements				
5	State Lagrangian	In the lagrangian formulation,	Remember	CO 3	CLO 09	AME533.09
	formulation?	the system's dynamic behavior				
		is described in terms of work	Name and Property of the Park		1	
		and energy using generalized				
		coordinates. This approach is the extension of the indirect				
		method. Therefore, all the				
		workless forces and constraint				
		forces are automatically				
		eliminated in this method.		~~~	<b>87</b> 0 40	
6	State Newton- Euler	The Newton-Euler formulation is derived by the direct	Understand	CO 3	CLO 10	AME533.10
	formulation?	is derived by the direct interpretation of Newton's				
	Tormulation.	Second Law of Motion, which				
		describes dynamic systems in				
		terms of force and momentum.				
		The equations incorporate all the				
		forces and moments acting on the individual robot links,				
		including the coupling forces				-
		and moments between the links.	- // -			
7	What is	The connectivity of a robot	Remember	CO 3	CLO 11	AME533.11
	kinematic Tree?	mechanism can be described				
		using a graph in which the nodes			4	
		represent the bodies and the arcs represent the joints. If this graph				
		does not contain any cycles,			100	
		implying that it is a topological			No.	
		tree, then the robot mechanism				
8	Evnloin	is called a kinematic tree.	Understand	CO 3	CLO 12	AME533.12
ð	Explain kinematic loop?	If the connectivity graph does contain cycles, then the robot	Understand	CO 3	CLU 12	AMESSS.12
	Amematic 100p:	mechanism contains kinematic				
		loops, and is called a closed-				
		loop system. The three				
		dynamics algorithms described				
		above do not work on closed-loop systems, although they can				
		be used as components in a				
		closed-loop dynamics algorithm.				
		In general, closed-loop systems				
		have more complicated				
		dynamics than kinematic trees, and they require more				
		and they require more sophisticated (and expensive)				
		algorithms to calculate their				
		dynamics.				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
9	What is RNEA?	Recursive Newton-Euler	Remember	CO 3	CLO 09	AME533.09
		algorithm (RNEA). This				
		algorithm solves the inverse				
		dynamics problem, and has a computational complexity of				
		O(n).				
10	What is ABA?	The articulated-body algorithm	Remember	CO 3	CLO 10	AME533.10
		(ABA): This algorithm solves				
		the forward dynamics problem,				
		and has a computational complexity of $O(n)$ .				
11	What is CRBA?	Composite-rigid-body algorithm	Remember	CO 3	CLO 11	AME533.11
	William IS CILDII.	(CRBA): This algorithm			02011	111111111111111111111111111111111111111
	,	calculates the joint-space inertia	1			
		matrix, H , and has a				
		computational complexity of O(n2).				
12	Explain	A different approach is to	Remember	CO 3	CLO 12	AME533.12
	workspace	transform the dynamics and				
	control?	control problem into the task				
		space, so that the control law is written in terms of the end				
		effector position and				
		orientation. We refer to this				
		approach as workspace				
12	Differentiate	Control.  A robot is said to have a fixed	Remember	CO 2	CLO 09	AME 522 00
13	fixed & floating	base if it is rigidly attached to a	Remember	CO 3	CLO 09	AME533.09
	bases in	fixed support. An industrial				
	robotics?	robot arm is a good example of				
		a fixed-base robot. If no part of				
	100	the robot mechanism is fixed, then it is said to have a floating				
	-	base.	4		-	
14	Define Motion	For given N path points, find an	Remember	CO 3	CLO 09	AME533.09
	through a	interpolating function through			. ~	
	sequence of	these points N – 1 order polynomial				
15	points.  Define path.	locus of points in joint space	Remember	CO 3	CLO 10	AME533.10
	P	(operational space) which the				
		manipulator has to follow in the				
	100	execution of the assigned	- 0	-		
		motion.				
		UNIT-IV				
1	What is	Trajectory planning is moving	Remember	CO 4	CLO 13	AME533.13
	trajectory	from point A to point B while				
	planning?	avoiding collisions over time.  This can be computed in both				
		discrete and continuous				
		methods. Trajectory planning is				
		a major area in robotics as it				
		gives way to autonomous				
		vehicles. Trajectory planning is sometimes referred to as motion				
		planning and erroneously as				
		path planning.				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
2		Geometric constraints are the	Remember	CO 4	CLO 14	AME533.14
	What are	constraints that can be expressed				
	geometric constraints?	solely in terms of the robot joint angles, these include bounds on				
	constraints.	the joint angles, avoidance of				
		self-collision and of collision				
		with obstacles, etc. These				
		constraints can thus be fully				
		taken into account in the path				
3	What is role of	planning step.  Optimization comes into play	Remember	CO 4	CLO 15	AME533.15
	optimization	when there are more than one	Remember	CO +	CLO 13	7 HVIL555.15
	· · · · · ·	path or trajectory that allow				
		achieving the task while				
		satisfying the constraints. It is				
		then interesting to select the				
		path or trajectory that optimizes a given objective.				
4	What is Joint	Joint-space trajectory generation	Remember	CO 4	CLO 16	AME533.16
	space	is in common usage in robotics				
	Trajectory?	to provide smooth, continuous				
		motion from one set of n joint				
		angles to another, for instance,				
		for moving between two distinct Cartesian poses for which the				
		inverse pose solution has				
		yielded two distinct sets of n				
		joint angles				
5	What is the role	A complementary way to	Remember	CO 4	CLO 13	AME533.13
	of obstacle avoidance?	address the motion problem is obstacle avoidance. The				
	avoluance !	objective is to move a vehicle				
		towards a target location free of				
		collisions with the obstacles				
		detected by the sensors during			· (	)
6	What is the	motion execution  The advantage of reactive	Remember	CO 4	CLO 14	AME533.14
0	advantage of	obstacle avoidance is to	Kemember	CO 4	CLO 14	AME333.14
	reactive	compute motion by introducing				
	obstacle	the sensor information within			1	
	avoidance?	the control loop, used to adapt				
		the motion to any contingency		· C		
7	What is slew	incompatible with initial plans.  Slew motion it is simplest type	Remember	CO 4	CLO 15	AME533.15
'	motion?	of motion. Robot is commanded	Remember	CO 4	CLO 13	741VIL555.15
		to travel from one point to				
		another at default speed.				
		Performs without any				
		calculations so it often leads to unanticipated results and wear				
		on the robot joint				
8	What is joint	Joint-interpolated motion	Remember	CO 4	CLO 16	AME533.16
	interpolated	requires the robot controller to				
	motion?	calculate the time it will take				
		each joint to reach its				
		destination at the commanded speed.				
9	What is straight	Straight-line interpolation	Remember	CO 4	CLO 13	AME533.13
	line	motion: requires the end of the				
	interpolation	end effector to travel along a				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
