## ELECTRONICS AND COMMUNICATION ENGINEERING

#### DEFINITIONS AND TERMINOLOGY QUESTION BANK

Course Name		:	ENERGY FROM WASTE
Course Code		:	AEE551
Program		:	B.Tech
Semester		:	VII
Branch		:	Electronics and communication Engineering
Section		:	A & B
Academic Year		:	2019 - 2020
Course Faculty		:	Ms. B. Navothna, Assistant Professor Ms. B. Manogna, Assistant Professor

#### **COURSE OBJECTIVES:**

The	course should enable the students to:
Ι	Understand the principles associated with effective energy management and to apply these principles in the day to day life.
Π	Develop insight into the collection, transfer and transport of municipal solid waste.
III	Explain the design and operation of a municipal solid waste landfill.
IV	Evaluate the main operational challenges in operating thermal and biochemical energy from waste facilities and device key processes involved in recovering energy from wastes.

### DEFINITIONS AND TERMINOLOGY QUESTION BANK

S.No	QUESTION	ANSWER	Blooms Level	СО	CLO	CLO Code
5.110	QUESTION		Dioonis Level		CLU	CLO Code
		UNIT-I				
1	What are different types of waste?	Waste is unwanted materials (or) unusable materials which are discarded after primary use and of no use. Types of waste are solid, wet, e-waste, biomedical, and hazardous.	Remember	CO 1	CLO 2	AEE551.02
2	Define municipal solid waste?	Municipal solid waste (MSW) is commonly known as garbage or trash in united states and rubbish in united kingdom it is a waste item consisting of everyday items that are discarded by public.	Remember	CO 1	CLO 1	AEE551.01
3	Explain Municipal solid waste management?	Management of solid waste generally refers to management of waste from residential societies, public places, commercial buildings, hospitals and streets and other institutions.	Remember	CO 1	CLO 3	AEE551.03

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	СО	CLO	CLO Code
4	Summarize	Physical properties of municipal	Remember	CO 1	CLO 2	AEE551.02
	physical	solid waste are 1) moisture

	to mitigate	and incineration and to			~	
	environmental	minimize environmental			-	
	effects due to	impacts, in particular		-	1	
	incineration?	atmospheric emissions, it is			1. C	
		proposed to replace single use		6.		
		containers with multiple use containers.		~		
				-		
		UNIT-II				
1	Define term	Land fill is a site for the	Remember	CO 2	CLO 6	AEE551.06
	landfill?	disposal of waste materials by				
		burial. It is the oldest form				
		of waste treatment.				
2	Explain land fill	The trench method is good in	Remember	CO 2	CLO 4	AEE551.04
	method?	areas where there is relatively				
		little waste, low groundwater,				
		and the soil is over 6 ft (1.8 m)				
		deep. The area method is				
		usually used to dispose of large amounts of solid waste.				
		In the trench method, a channel				
		with a typical depth of 15 ft (4.6				
		with a typical deput of 15 ft (4.0				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	СО	CLO	CLO Code
		m) is dug, and the excavated				
		soil is later used as a cover over				
		the waste. Grading in the trench				
		method must accommodate the				
		drain-off of rainwater. Another				
		consideration is the type of				
		subsurface soil that exists under				
		the topsoil. Clay is a good source of soil because it is				
		nonporous. Weather and the				
		amount of time the landfill will				
		be in use are additional				
		considerations.				
3	Discuss concept	Landfill gas is created during	Remember	CO 2	CLO 6	AEE551.06
	land fill gas?	the anaerobic decomposition of				
		organic substances in municipal		)		
		solid waste (MSW) and				
		commercial and industrial				
		(C&I) wastes. Depending upon				
		the landfill design and its				
		management, as well as waste composition, compaction,	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1			
		moisture and several other				
		factors, thousands of landfills				
		are available worldwide to				
		collect and utilize this valuable				
		renewable energy source for				
		power generation. If landfill gas				
		is allowed to escape to				
		atmosphere, methane contained				
		within it is a powerful				
		greenhouse gas, 21 times more				
		so than carbon dioxide.		_		
		Therefore, its prevention of escape to atmosphere and its				
		utilization as a renewable fuel				2
		source is a win-win situation.	Contraction of the second			
4	Listout landfill	There are two types of landfills	Remember	CO 2	CLO 4	AEE551.04
	types?	namely,				
	100	1) Natural attenuation landfill			1	
		and		- 0		
		2) Containment landfill.		67	0.00	
		Natural attenuation landfill is	100	~		
		similar to what has been	1.1.1	1		
		discussed in the previous paragraph where there is no				
		provision below the wastes to				
		minimize the migration of				
		harmful contaminants. The				
		unsaturated subsurface below				
		the wastes naturally attenuate				
		harmful contaminants before it				
		reaches ground water. It is				
		presumed that the contaminants				
		reaching ground water will be				
		well within the permissible limit, even though in most of				
		the cases it would not be. For				
1		the same reason, these types of				
						1
		landfills are not preferred in				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
_	D'a ini	spite of its simplicity.	D. 1	00.0	OLO 1	
5	Discuss sitting	Considerations for site include	Remember	CO 2	CLO 6	AEE551.06
	consideration?	public opinion, traffic patterns				
		and congestion, climate, zoning requirements, availability of				
		cover material and liner as well,				
		high trees or buffer in the site				
		perimeter, historic buildings,				
		and endangered species,				
		wetlands, and site land				
		environmental factors, speed				
		limits, and underpass				
	0.00	limitations, load limits on				
		roadways, bridge capacities, and			1	
		proximity of major roadways,				
		haul distance, hydrology and				
		detours.				
6	Discuss site	This requires the development	Remember	CO 2	CLO 6	AEE551.06
	selection of land	of a working plan – a plan, or a				
	fill	series of plans, outlining the				
		development and descriptions of site location, operation,				
		engineering and site restoration				
7	Discuss various	Trench and area methods, along	Remember	CO 2	CLO 6	AEE551.06
,	methods of land	with combinations of both, are	Remember	002	CLUU	ALL551.00
	fill	used in the operation of				
		landfills. Both methods operate				
		on the principle of a "cell,"				
		which in landfills comprises the				
		compacted waste and soil				
		covering for each day.				
8	Summarize	A hazardous waste landfill must	Remember	CO 2	CLO 6	AEE551.06
	preliminary	fulfill the following design				
	design of	requirements: -				
	landfills?	1. Double liner			- C	>
	1	2. Double leach ate collection removal				
		systems			A	
	0	3. Leak detection system				
		4. Monitoring storm			100	
	~~~	water run-on and run-				
		off - Monitoring wind				
		dispersal Absence of		1		
		liquid wastes	1.1.1			
		5. Cover system in place				
9	Discuss land fill	Landfill gas composition and	Remember	CO 2	CLO 4	AEE551.04
	gas composition?	production rates are primarily				
		affected by the waste that has				
		been deposited in the landfill				
		site. MSW contains 150-250 kg of organic carbon per tonne				
		which micro-organisms convert				
		to landfill gas via anaerobic				
		processes. The gas formation is				
		influenced by a number of				
		factors such as waste				
		composition, landfill storage				
		height and density, air				
		neight and density, an				
		temperature, atmospheric pressure and precipitation				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
		levels.				
10	What is	Leachate is the landfill waste	Remember	CO 2	CLO 6	AEE551.06
	leacheate?	that dissolves many compounds				
		that contain pollutants from				
		both organic substances and				
		heavy metal origin.	<b>D</b>		<b>GT 0 6</b>	
11	Analysis	Landfill Leachates consist of	Remember	CO 2	CLO 6	AEE551.06
	characteristics	soluble organic and inorganic				
	of landfill	compounds as well as				
	leacheates	suspended particles. Depending				
		on weather leachate flow can increase (during rainy season)				
		or decrease (during dry/summer				
		season). The landfill leachate		_		
		discharge may lead to serious				
		environmental problems.		- U		
		Leachate may percolate through				
		landfill liners and subsoil				
		causing pollution of ground				
		water and surface waters				
		resources.				
12	Discuss landfill	Solid-waste management	Remember	CO 2	CLO 6	AEE551.06
	leacheate	facilities such as landfills can				
	movement?	affect the quality of underlying				
		groundwater and surface water.				
13	Discuss control	Leachate Control It should be	Remember	CO 2	CLO 4	AEE551.04
	of landfill?	noted that if all infiltration is				
		excluded and the solid waste				
		kept dry, biodegradation by		-		
		bacteria, fungi, and other		-		
		organisms will cease and the				
	-	solid waste will be preserved in its original state. The		_		
	C	maintenance of an optimal		- 7		
	100	amount of moisture in the fill,			100	
		as in controlled composting (an		_		2
	6	aerobic process), is necessary				
		for biodegradation (an		/	A	
	0	anaerobic process in a landfill),				
		methane production, final			100	
	- Y	stabilization, and possible future		0		
		recycling of the solid waste or		67		
		reuse of the site.		1		
14	Advantages of	The waste deposited in a landfill	Remember	CO 2	CLO 6	AEE551.06
	landfill gas	gets subjected, over a period of				
	recovery?	time, to anaerobic conditions				
		and its organic fraction gets				
		slowly volatilized and				
		decomposed, leading to				
		production of landfill gas which contains a high percentage of				
		methane (about 50%).				
		Advantages of land fill gas				
		recovery are:				
		1. Reduced GHG				
		emissions;				
		2. Low cost means				
		for waste disposal;				
		and				
		3. The gas can be				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
		utilized for power generation or as domestic fuel				
15	Discuss environmental monitoring system for land fill gases	The gas monitoring plan should also be specific to the gas measuring device, and the measuring device operating manual should be incorporated by reference into the site gas monitoring plan. Methane should be controlled because it can migrate away from a landfill and become an environmental and safety hazard.	Remember	CO 2	CLO 6	AEE551.06
		UNIT-III				
1	Define Bioenergy?	Bioenergy consists of solid, liquid, or gaseous fuels. Liquid fuels can be used directly in the existing road, railroad, and aviation transportation network stock, as well as in engine and turbine electrical power generators.	Remember	CO 3	CLO 8	AEE551.08
2	Explain bio-mass conversion?	Biomass power technologies convert renewable biomass fuels to heat and electricity using processes similar to those employed with fossil fuels. At present, the primary approach for generating electricity from biomass is combustion direct-	Remember	CO 3	CLO 8	AEE551.08
		firing. Combustion systems for electricity and heat production are similar to most fossil-fuel fired power plants. The biomass fuel is burned in a boiler to produce high-pressure steam.	21	7	710.	2
3	Explain bio- chemical conversion?	In biochemical conversion – plants are the main feedstock. Plants are made up of mostly these three parts – hemicellulose, cellulose, and lignin. Cellulose is protected in a sheath of the other two so goes through a form of pretreatment using acid or catalysts.	Remember	CO 3	CLO 8	AEE551.08
4	Define anaerobic digestion?	Anaerobic digestion is a commercially proven technology and is widely used for recycling and treating wet organic waste and waste waters. It is a type of fermentation that converts organic material into biogas, which mainly consists of methane (approximately 60%) and carbon dioxide (approximately 40%) and is	Remember	CO 3	CLO 8	AEE551.08

biodiesel?form or may be blended with petroleum diesel at any concentration for use in most modern diesel engines. Biodiesel is raw vegetable oil transformed, treated, and standardized through chemical processes.RememberCO 3CLO 7AEI6What is Biochar?Biochar is a fine-grained charcoal high in organic carbon and largely resistant to decomposition. Biochar is produced by heating biomass in the absence (or under reduction) of air, or pyrolysis.RememberCO 3CLO 7AEI7Define transesterification ?In transesterification, biodiesel is formed. Takes the place of petroleum or used as a mix. Takes vegetable oil, animal fat, or grease and turns it into a fatty acid methyl ester by taking the alkoxy group and replacing it with the alcohol. Usually this process is base or acid catalyzed.RememberCO 3CLO 8AEI8Summarize sources of energy generation using bio chemical conversion?Biochemical conversion entails breaking down biomass to make the carbohydrates available for processing into sugars, which can then be converted into biofuels and bio products through the use of microorganisms and catalystsCO 3CLO 8AEI	
biodiesel?       form or may be blended with petroleum diesel at any concentration for use in most modern diesel engines. 	MSW-refuse	of municipal solid waste but in				
	derived solid fuel	case of two stage oxidation is called gasification				
13	Define enzyme	Enzyme Primer	Remember	CO 3	CLO 8	AEE551.08
	primer?	1. Enzymes are proteins				
		that naturally enable				
		chemical reactions in				
		living organisms. 2. Many of these				
		reactions break down				
		larger molecules into				
		smaller ones.				
14	Define Industrial	The waste generated in the	Remember	CO 3	CLO 9	AEE551.09
	waste agro residues?	industries after the products are				
	residues?	produced such as ash ,paints and radioactive waste. In agricultural				
		fields the waste is dry grass.				
15	Define aerobic	This process of is also known	Remember	CO 3	CLO 5	AEE551.05
	digestion?	as the biogas platform, methane,				
		also known as natural gas, is				
		produced. This process of decomposition uses natural				
		consortia of microorganisms to				
		break down biomass into its				
		building blocks.				
		UNIT-IV				
		0111-17				
1	Define term	Biogas is a bio-	Remember	CO 4	CLO 8	AEE551.08
	biogas?	fuel produced from the anaerobic fermentation of				
		carbohydrates in plant material				
		or waste (food peelings or			0	
	1. N. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1.	manure) by bacteria.		-		
2	What is landfill	Landfill gas utilization is a	Remember	CO 4	CLO 8	AEE551.08
	gas utilization?	process of gathering, processing, and treating the				
		methane gas emitted from			1	
		decomposing garbage to				
		produce electricity, heat, fuels,		-	1	
		and various chemical			· · · · ·	
3	Discuss how	compounds. The gas must be continuously	Remember	CO 4	CLO 8	AEE551.08
	landfill gases are	extracted under controlled	remember	00 1		111100
	collected?	conditions. Perforated tubes are				
		drilled into the landfill body and	-	_		
		interconnected by a pipe work				
		system. Using a blower, the gas is sucked from the landfill. A				
		well-designed gas collection				
		system will flexibly capture the				
		landfill gas from various spots				
		and handful high temperatures,				
		leach ate, condensates and air content – thus ensuring a cost-				
		efficient collection as well as				
		stable landfill gas quality.				
		Several engineering companies				
		specialize in this field and offer				
		their services on a worldwide.

	biomass	cleaner fuel for both thermal				
	gasification.	energy and electricity				
		generation, and provides a mean				
		to reduce or remove				
		conventional fossil fuels.				
		Gasification gives biomass the flexibility to fuel a wide range				
		of electricity generation				
		systems: gas turbines, fuel cells,				
		and reciprocating engines.				
		A wide variety of biomass				
		materials can be gasified, many				
		of which would be difficult to				
		burn otherwise.		-	1	
		Gasification offers one means				
		of processing waste fuels, many				
		of which can be problematic.				
		Gasification has the potential of				
		reducing emission of pollutants				
		and greenhouse gases per unit energy output.				
		Projected process efficiencies				
		are higher than the direct				
		combustion systems and				
		comparable with fossil systems

14						
14	impact of hazardous E-	of E-waste on air is through air pollution.				

S.No	QUESTION	ANSWER	<b>Blooms Level</b>	CO	CLO	CLO Code
	waste on	When electronics containing				
	environment?	heavy metals such as lead,				
		barium, mercury, lithium (found				
		in mobile phone and computer				
		batteries), etc., are improperly				
		disposed, these heavy metals				
		leach through the soil to reach				
		groundwater channels which				
		eventually run to the surface as				
		streams or small ponds of water.				
		In this way, toxic heavy metals				
		and chemicals from e-waste				
		enter the "soil-crop-food				
		pathway," one of the most			1	
		significant routes for heavy				
		metals' exposure to humans.	Sec. 1	$\sim$
