

## DATA PREPARATION AND ANALYSIS LABORATORY

<b>II Semester: CSE</b>								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
BCSB20	Core	L	T	P	C	CIA	SEE	Total
		0	0	4	2	30	70	100
<b>Contact Classes: Nil</b>	<b>Total Tutorials: Nil</b>	<b>Total Practical Classes: 36</b>			<b>Total Classes: 36</b>			

### I. COURSE OVERVIEW:

In this laboratory students will develop a solid understanding of data pre-processing, cluster analysis, genetic algorithms, data transformation, and hierarchical clustering. These skills will enable them to effectively prepare and analyze data, derive valuable insights, and make data-driven decisions in various domains.

### II. OBJECTIVES

**The students will try to learn:**

- I. The pre-processing method for multi-dimensional data
- II. The Practice on data cleaning mechanisms
- III. The various data exploratory analysis
- IV. The visualizations for clusters or partitions

### COURSE OUTCOMES:

**After successful completion of the course, students should be able to:**

CO 1	<b>Apply</b> pre-processing techniques for cleaning data.	Apply
CO 2	<b>Develop</b> a cluster models for categorizing data a cluster models for categorizing data	Create
CO 3	<b>Apply</b> genetic algorithms to optimization problems	Apply
CO 4	<b>Implement</b> data transformation techniques on spatial, time series and numerical data	Apply
CO 5	<b>Choose</b> clustering algorithm for implementing hierarchical clustering	Remember

### IV. SYLLABUS

#### LIST OF EXPERIMENTS

<b>Week-1</b>	<b>DATA PRE-PROCESSING AND DATA CUBE</b>
Data preprocessing methods on student and labor datasets Implement data cube for data warehouse on 3-dimensional data	
<b>Week-2</b>	<b>DATA CLEANING</b>
Implement various missing handling mechanism, Implement various noisy handling mechanisms	
<b>Week-3</b>	<b>EXPLORATORY ANALYSIS</b>
Develop k-means and MST based clustering techniques, Develop the methodology for assessment of clusters for given dataset	
<b>Week-4</b>	<b>ASSOCIATION ANALYSIS</b>
Design algorithms for association rule mining algorithms	

<b>Week-5</b>	<b>HYPTOTHYSIS GENERATION</b>
Derive the hypothesis for association rules to discovery of strong association rules; Use confidence and support thresholds.	
<b>Week-6</b>	<b>TRANSFORMATION TECHNIQUES</b>
Construct Haar wavelet transformation for numerical data, Construct principal component analysis (PCA) for 5-dimensional data.	
<b>Week-7</b>	<b>DATA VISUALIZATION</b>
Implement binning visualizations for any real time dataset, Implement linear regression techniques	
<b>Week-8</b>	<b>CLUSTERS ASSESSMENT</b>
Visualize the clusters for any synthetic dataset,Implement the program for converting the clusters into histograms	
<b>Week-9</b>	<b>HIERARCHICAL CLUSTERING</b>
Write a program to implement agglomerative clustering technique ,Write a program to implement divisive hierarchical clustering technique	
<b>Week-10</b>	<b>SCALABILITY ALGORITHMS</b>
Develop scalable clustering algorithms ,Develop scalable a priori algorithm

<b>SOFTWARE AND HARDWARE REQUIREMENTS FOR 18 STUDENTS:</b>	
<b>SOFTWARE:</b> Open source Weka 3.8, Python	
<b>HARDWARE:</b> 18 numbers of Intel Desktop Computers with 4 GB RAM
