

SMART GRID TECHNOLOGIES

PE-I: EPS								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
		L	T	P		C	CIA	SEE
BPSB05	Elective	3	-	-	3	30	70	100
		Contact Classes: 45		Tutorial Classes: Nil		Practical Classes: Nil		Total Classes: 45
I. COURSEOVERVIEW:								
<p>This course introduces concept of Smart Grid, the rationale for smart grid technology and its characteristics. This course focuses on monitoring, analysis, control and communication capabilities to the national electrical delivery system to maximize the throughput of the system while reducing the energy consumption. It also elaborates the integration of renewable energy resources and storage devices to achieve a more efficient and reliable grid, enable active participation of consumers with more environmental constraints.</p>								
II. COURSE OBJECTIVES:								
This course should enable the students to:								
<p>I. Understand concept of smart grid and its advantages over conventional grid. II. Explain smart metering techniques. III. Learn wide area measurement techniques. IV. Describe the problems associated with integration of distributed generation and its solution through smart grid.</p>								
III. COURSE OUTCOMES:								
After successful completion of the course, students will be able to:								
CO 1	Explain the features smart grid to increase grid efficiency, self-healing, accessibility and reliability.						Understand	
CO 2	Analyze the different energy storage solutions available for improving grid stability and security.						Analyze	
CO 3	Analyze the dynamic behavior of Micro grid and its grid integration issues to meet the load requirement effectively.						Analyze	
CO 4	Outline the role of different renewable resources like PV, Wind, etc for improving the system dynamics performance.						Understand	
CO 5	Identify the efficient management of power quality for compatibility between all the equipments connected to the grid.						Understand	
CO 6	Make use of sensors, transducers, intelligent electronic devices and meter to improve the distribution system overall performance.						Apply	
IV. SYLLABUS:								
UNIT-I	INTRODUCTION TO SMART GRID						Classes: 09	
Introduction to smart grid, evolution of electric grid, concept of smart grid, definitions, need of smart grid, concept of robust, self healing grid present development & international policies in smart grid.								
UNIT-II	AUTOMATION IN GRID MANAGEMENT						Classes: 10	
Introduction to smart meters, real time pricing, smart appliances, automatic meter reading (AMR), outage management system (OMS), plug in hybrid electric vehicles (PHEV), vehicle to grid, smart sensors, home, building automation, smart substations, substation automation, feeder automation.								
UNIT-III	GEOGRAPHIC INFORMATION SYSTEM (GIS)						Classes: 08	
Intelligent Electronic Devices (IED), their application for monitoring, protection, smart storage like battery.								

SMES, pumped hydro, compressed air energy storage, wide area measurement system (WAMS), phase measurement UNIT(PMU).		
UNIT-IV	CONCEPT OF MICRO-GRID	Classes: 09
Need and applications of micro grid, formation of micro grid, issues of interconnection, protection, control of micro grid, plastic, organic solar cells, thin film solar cells, variable speed wind generators, fuel cells, micro turbines, captive power plants, integration of renewable energy sources.		
UNIT-V	POWER QUALITY IN SMART GRIDS	Classes: 09
Power Quality, EMC in smart grid, power quality issues of grid connected renewable energy sources, power quality conditioners for smart grid, web based power quality monitoring, power quality audit, advanced metering infrastructure (AMI) and various communication means and IP based protocols.
