<p><b>I. COURSEOVERVIEW:</b>                      The purpose of this course is to make the students understand about load compensation and how to select various types of reactive power compensation devices in transmission systems both during steady state and transient state operation. The course also enables the students about the management of reactive power on demand side, distribution side, and utility side of the power system.</p> <p><b>II. COURSE OBJECTIVES:</b>  <b>This course should enable the students to:</b></p> <ol style="list-style-type: none"> <li>I. Explain the necessity of reactive power compensation</li> <li>II. Describe load compensation</li> <li>III. Understand the various types of reactive power compensation in transmission systems</li> <li>IV. Illustrate reactive power coordination system</li> <li>V. Discuss distribution side and utility side reactive power management.</li> </ol> <p><b>III. COURSE OUTCOMES:</b></p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th colspan="3" style="text-align: left;"><b>After successful completion of the course, students will be able to:</b></th> </tr> </thead> <tbody> <tr> <td style="width: 10%;">CO 1</td> <td style="width: 70%;">Discuss the objectives and specifications of reactive compensation for designing the compensating equipment.</td> <td style="width: 20%;">Apply</td> </tr> <tr> <td>CO 2</td> <td>Describe the characteristics of an uncompensated line and a compensated line which are used for evaluating the performance of lines.</td> <td>Analyze</td> </tr> <tr> <td>CO 3</td> <td>Examine the mathematical modeling, operation planning and transmission benefits in reactive power coordination.</td> <td>Analyze</td> </tr> <tr> <td>CO 4</td> <td>Describe the load patterns, power tariffs, flicker and harmonic voltage levels used in billing the power consumers.</td> <td>Apply</td> </tr> <tr> <td>CO 5</td> <td>Explain the use of different types of capacitors, their characteristics which are used in user side reactive power management.</td> <td>Analyze</td> </tr> <tr> <td>CO 6</td> <td>Discuss the impact of electric traction systems and furnaces on the reactive power and suggest the user side reactive power management techniques.</td> <td>Analyze</td> </tr> </tbody> </table>									<b>After successful completion of the course, students will be able to:</b>			CO 1	Discuss the objectives and specifications of reactive compensation for designing the compensating equipment.	Apply	CO 2	Describe the characteristics of an uncompensated line and a compensated line which are used for evaluating the performance of lines.	Analyze	CO 3	Examine the mathematical modeling, operation planning and transmission benefits in reactive power coordination.	Analyze	CO 4	Describe the load patterns, power tariffs, flicker and harmonic voltage levels used in billing the power consumers.	Apply	CO 5	Explain the use of different types of capacitors, their characteristics which are used in user side reactive power management.	Analyze	CO 6	Discuss the impact of electric traction systems and furnaces on the reactive power and suggest the user side reactive power management techniques.	Analyze
<b>After successful completion of the course, students will be able to:</b>																													
CO 1	Discuss the objectives and specifications of reactive compensation for designing the compensating equipment.	Apply																											
CO 2	Describe the characteristics of an uncompensated line and a compensated line which are used for evaluating the performance of lines.	Analyze																											
CO 3	Examine the mathematical modeling, operation planning and transmission benefits in reactive power coordination.	Analyze																											
CO 4	Describe the load patterns, power tariffs, flicker and harmonic voltage levels used in billing the power consumers.	Apply																											
CO 5	Explain the use of different types of capacitors, their characteristics which are used in user side reactive power management.	Analyze																											
CO 6	Discuss the impact of electric traction systems and furnaces on the reactive power and suggest the user side reactive power management techniques.	Analyze																											
<b>IV. SYLLABUS</b>																													
<b>UNIT-I</b>	<b>LOAD COMPENSATION</b>						<b>Classes: 09</b>																						
Objectives and specification: Reactive power characteristics, inductive and capacitive approximate biasing, load compensator as a voltage regulator, phase balancing and power factor correction of unsymmetrical loads examples.																													
<b>UNIT-II</b>	<b>STEADYSTATE REACTIVE POWER COMPENSATION IN TRANSMISSION SYSTEM</b>						<b>Classes: 09</b>																						
Uncompensated line: Types of compensation, passive shunt and series and dynamic shunt compensation, examples transient state reactive power compensation in transmission systems: Characteristic time periods, passive shunt compensation, static compensations, series capacitor compensation, compensation using synchronous condensers, examples.																													

<b>UNIT-III</b>	<b>REACTIVE POWER COORDINATION</b>	<b>Classes: 09</b>
<p>Objective, mathematical modeling, operation planning, transmission benefits, basic concepts of quality of power supply, disturbances steady, state variations.</p> <p>Effects of under voltages, frequency, harmonics, radio frequency and electromagnetic interferences.</p>		
<b>UNIT-IV</b>	<b>DEMAND SIDE MANAGEMENT</b>	<b>Classes: 09</b>
<p>Load patterns, basic methods load shaping, power tariffs KVAR based tariffs penalties for voltage flickers and Harmonic voltage levels; Distribution side reactive power management: System losses, loss reduction methods, examples, reactive power planning, objectives, economics planning capacitor placement, retrofitting of capacitor banks.</p>		
<b>UNIT-V</b>	<b>USER SIDE REACTIVE POWER MANAGEMENT</b>	<b>Classes: 09</b>
<p>Requirements for domestic appliances, purpose of using capacitors, selection of capacitors, deciding factors, types of available capacitor, characteristics and Limitations; Reactive power management in electric traction systems and arc furnaces: Typical layout of traction systems, reactive power control requirements, distribution transformers, Electric arc furnaces, basic operations- furnaces transformer, filter requirements, remedial measures, power factor of an arc furnace.</p>
