Contact Classes: 45		Tutorial Classes: 15		Practical Classes: Nil			Total Classes: 60																			
<p>I. COURSE OVERVIEW: The primary objective of this course is to introduce the concept of algorithm as a precise mathematical concept, and study how to design algorithms, establish their correctness, study their efficiency and memory needs. The course consists of a strong mathematical component in addition to the design of various algorithms.</p> <p>II. OBJECTIVES: The course should enable the students to:</p> <ul style="list-style-type: none"> I Calculate performance of algorithms with respect to time and space complexity. II Illustrate the graph traversals and tree traversals to solve the problems III Demonstrate the concepts greedy method and dynamic programming for several applications like knapsack problem, job sequencing with deadlines, and optimal binary search tree, TSP. IV Illustrating the methods of backtracking and branch bound techniques to solve the problems like n-queens problem, graph coloring and TSP respectively <p>III. COURSE OUTCOMES: After successful completion of the course, students should be able to:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 5%;">CO 1</td> <td style="width: 75%;">Find the (worst case, randomized, amortized) running time and space complexity of given algorithms using techniques such as recurrences and properties of probability.</td> <td style="width: 20%;">Remember</td> </tr> <tr> <td>CO 2</td> <td>Apply divide and conquer algorithms for solving sorting, searching and matrix multiplication.</td> <td>Apply</td> </tr> <tr> <td>CO 3</td> <td>Make Use of appropriate tree traversal techniques for finding shortest path.</td> <td>Apply</td> </tr> <tr> <td>CO 4</td> <td>Identify suitable problem solving techniques for a given problem and finding optimized solutions using Greedy and Dynamic Programming techniques</td> <td>Remember</td> </tr> <tr> <td>CO 5</td> <td>Utilize backtracking and branch and bound techniques to deal with traceable and in-traceable problems.</td> <td>Apply</td> </tr> <tr> <td>CO 6</td> <td>Describe the classes P, NP, NP-Hard, NP-complete for solving deterministic and non deterministic problems.</td> <td>Understand</td> </tr> </table>									CO 1	Find the (worst case, randomized, amortized) running time and space complexity of given algorithms using techniques such as recurrences and properties of probability.	Remember	CO 2	Apply divide and conquer algorithms for solving sorting, searching and matrix multiplication.	Apply	CO 3	Make Use of appropriate tree traversal techniques for finding shortest path.	Apply	CO 4	Identify suitable problem solving techniques for a given problem and finding optimized solutions using Greedy and Dynamic Programming techniques	Remember	CO 5	Utilize backtracking and branch and bound techniques to deal with traceable and in-traceable problems.	Apply	CO 6	Describe the classes P, NP, NP-Hard, NP-complete for solving deterministic and non deterministic problems.	Understand
CO 1	Find the (worst case, randomized, amortized) running time and space complexity of given algorithms using techniques such as recurrences and properties of probability.	Remember																								
CO 2	Apply divide and conquer algorithms for solving sorting, searching and matrix multiplication.	Apply																								
CO 3	Make Use of appropriate tree traversal techniques for finding shortest path.	Apply																								
CO 4	Identify suitable problem solving techniques for a given problem and finding optimized solutions using Greedy and Dynamic Programming techniques	Remember																								
CO 5	Utilize backtracking and branch and bound techniques to deal with traceable and in-traceable problems.	Apply																								
CO 6	Describe the classes P, NP, NP-Hard, NP-complete for solving deterministic and non deterministic problems.	Understand																								
IV. SYLLABUS:																										
MODULE -I	INTRODUCTION						Classes: 09																			
Algorithm: Pseudo code for expressing algorithms; Performance analysis: Space complexity, time complexity; Asymptotic notations: Big O notation, omega notation, theta notation and little o notation, amortized complexity; Divide and Conquer: General method, binary search, quick sort, merge sort, Strassen's matrix multiplication.																										
MODULE -II	SEARCHING AND TRAVERSAL TECHNIQUES						Classes: 08																			
Disjoint set operations, union and find algorithms; Efficient non recursive binary tree traversal algorithms, spanning trees; Graph traversals: Breadth first search, depth first search, connected components, biconnected components.																										
MODULE -III	GREEDY METHOD AND DYNAMIC PROGRAMMING						Classes: 10																			

Greedy method: The general method, job sequencing with deadlines, knapsack problem, minimum cost spanning trees, single source shortest paths.

Dynamic programming: The general method, matrix chain multiplication optimal binary search trees, 0/1 knapsack problem, single source shortest paths, all pairs shortest paths problem, the travelling salesperson problem.

MODULE -IV	BACKTRACKING AND BRANCH AND BOUND	Classes: 09
-------------------	--	--------------------

Backtracking: The general method, the 8 queens problem, sum of subsets problem, graph coloring, Hamiltonian cycles; Branch and bound: The general method, 0/1 knapsack problem, least cost branch and bound solution, first in first out branch and bound solution, travelling salesperson problem.

MODULE -V	NP-HARD AND NP-COMPLETE PROBLEMS	Classes:09
------------------	---	-------------------

Basic concepts: Non-deterministic algorithms, the classes NP - Hard and NP, NP Hard problems, clique decision problem, chromatic number decision problem, Cook's theorem.
