I. COURSEOVERVIEW:

The software testing is a process of executing a program or application with the intent of finding the bugs. This course will help students learn catch bugs and break software as you discover different testing methods that will help build better software. It will teach and make students think like a software tester and help in finding bugs in code earlier and write better code. The course demonstrates an in-depth understanding of the tools and technologies for software testing and do better programming and test the programsefficiently.

II. COURSEPRE-REQUISITES:

| Level | Course Code | Semester | Prerequisites | Credits |
|-------|----------------|----------|----------------------|---------|
| UG | ACS008 | V | Software Engineering | 4 |

III. MARKSDISTRIBUTION:

| Subject | SEE Examination | CIA Examination | Total Marks |

| ~ | LCD / PPT | ~ | Seminars | × | Mini Project | × | Videos |
| × | Open Ended Experi | ments | | | | | |

IV. DELIVERY / INSTRUCTIONALMETHODOLOGIES:

V. EVALUATIONMETHODOLOGY:

The course will be evaluated for a total of 100 marks, with 30 marks for Continuous Internal Assessment (CIA) and 70 marks for Semester End Examination (SEE). Out of 30 marks allotted for CIA during the semester, marks are awarded by taking average of two CIA examinations or the marks scored in the make-up examination.

Semester End Examination (SEE): The SEE is conducted for 70 marks of 3 hours duration. The syllabus for the theory courses is divided into five units and each unit carries equal weightage in terms of marks distribution. The question paper pattern is as follows. Two full questions with "either" or "choice" will be drawn from each unit. Each question carries 14 marks. There could be a maximum of two sub divisions in a question.

The emphasis on the questions is broadly based on the following criteria:

| 50 % | To test the objectiveness of the concept. |
|------|--|
| 50 % | To test the analytical skill of the concept OR to test the application skill of the concept. |

Continuous Internal Assessment (CIA):

CIA is conducted for a total of 30 marks (Table 1), with 25 marks for Continuous Internal Examination (CIE), 05 marks for Quiz/ Alternative Assessment Tool (AAT).

| Table 1: Assessment pattern | ı for | CIA |
|-----------------------------|-------|-----|
|-----------------------------|-------|-----|

| Component | | Total Marka | |
|--------------------|----------|-------------|----|
| Type of Assessment | CIE Exam | Quiz / AAT | |
| CIA Marks | 25 | 05 | 30 |

Continuous Internal Examination (CIE):

Two CIE exams shall be conducted at the end of the 8th and 16th week of the semester respectively. The CIE exam is conducted for 25 marks of 2 hours duration consisting of two parts. Part–A shall have five compulsory questions of one mark each. In part–B, four out of five questions have to be answered where, each question carries 5 marks. Marks are awarded by taking average of marks scored in two CIE exams.

Quiz / Alternative Assessment Tool (AAT):

Two Quiz exams shall be online examination consisting of 25 multiple choice questions and are be answered by choosing the correct answer from a given set of choices (commonly four). Marks shall be awarded considering the average of two quizzes for every course. The AAT may include seminars, assignments, term paper, open ended experiments, five minutes video and MOOCs.

VI. HOW PROGRAM OUTCOMES AREASSESSED:

| | Program Outcomes (POs) | Strength | Proficiency assessed by |
|------|--|----------|----------------------------|
| PO 1 | Engineering knowledge: Apply the knowledge of | 3 | Presentation |
| | mathematics, science, engineering fundamentals, and an | | on |
| | engineering specialization to the solution of complex | | real-world |
| | engineering problems. | | problems |
| PO 2 | Problem analysis: Identify, formulate, review research | 3 | Assignment |
| | literature, and analyze complex engineering problems reaching | | |
| | substantiated conclusions using first principles of mathematics, | | |
| | natural sciences, and engineering sciences | | |
| PO 3 | Design/development of solutions: Design solutions for | 2 | Assignment |
| | complex engineering problems and design system | | |
| | components or processes that meet the specified needs with | | |
| | appropriate consideration for the public health and safety, and | | |
| | the cultural, societal, and environmental considerations. | | |
| PO 4 | Conduct investigations of complex problems: Use research- | 3 | Seminar |
| | based knowledge and research methods including design of | | |
| | experiments, analysis and interpretation of data, and synthesis | | |
| | of the information to provide valid conclusions. | | |

VII. HOW PROGRAM SPECIFIC OUTCOMES AREASSESSED:

| | Program Specific Outcomes (PSOs) | Strength | Proficiency assessed by |
|-------|--|----------|----------------------------|
| PSO 1 | Professional Skills: The ability to understand, analyze and | 2 | Seminar |
| | develop computer programs in the areas related to algorithms, | | |
| | system software, multimedia, web design, big data analytics, | | |
| | and networking for efficient design of computer-based | | |
| | systems of varying complexity. | | |
| PSO 2 | Software Engineering Practices: The ability to apply standard practices and strategies in software service management using open-ended programming environments with agility to deliver a quality service for business success. | 2 | Assignment |
| PSO 3 | Successful Career and Entrepreneurship: The ability to | 1 | Assignment |
| | employ modern computer languages, environments, and | | |
| | platforms in creating innovative career paths to be an | | |
| | entrepreneur, and a zest for higher studies. | | |

VIII. COURSE OBJECTIVES:

| The cour | The course should enable the students to: | | | | | | |
|----------|---|--|--|--|--|--|--|
| Ι | Understand the concept of software testing objectives, process criteria, strategies and methods. | | | | | | |
| II | Demonstrate various software testing issues and solutions in software like unit test, integration, regression and system testing. | | | | | | |
| III | Demonstrate the techniques and skills on how to use modern software testing tools to support software testing projects. | | | | | | |
| IV | Understand important concepts of complexity metrics and object oriented metrics. | | | | | | |

IX. COURSE OUTCOMES:

| COS | COURSE OUTCOMES | CLOS | COURSE LEARNING OUTCOMES |
|-----|--|--------|--|
| CO1 | Understand the basic concepts of testing, path | CLO 1 | Explain the importance of testing and purpose of testing. |
| | testing and sensitization | CLO 2 | Illustrate different and compare dichotomies of testing. |
| | | CLO 3 | Demonstrate the model for testing and different testing levels and role of models. |
| | | CLO 4 | Describe the consequences and taxonomy of bugs and different bugs in project environment. |
| | | CLO 5 | Illustrate the concepts of path testing and predicate loops and path sensitization. |
| | | CLO 6 | Explain Path instrumentation and their applications and link markers. |
| CO2 | An Ability to learn about the transaction flow testing. | CLO 7 | List Transaction flows techniques and transaction flow structures and their test databases. |
| | | CLO 8 | State Basics of data flow testing and Strategies in data flow testing, applications of dataflow testing. |
| CO3 | Understand the concepts of domain based testing and logic based testing. | CLO 9 | Describe Domains and paths and explain about domains and bugs and their tools effectiveness. |
| | | CLO 10 | Demonstrate Domains and Interfaces testing. |
| | | CLO 11 | Explain linearising transformation and coordinate transformation |
| | | CLO 12 | Describe Logic based testing and Decision tables and compare hardware and software testing. |
| | | CLO 13 | Illustrate Path expression and KV Charts and their specifications. |
| CO4 | To describe about the path product and data flow | CLO 14 | State Path products and path expression, different laws used in path testing. |
| | anomaly detection. | CLO 15 | Demonstrate Reduction procedure and applications. |
| | | CLO 16 | Explain about Regular expressions |
| | | CLO17 | Demonstrate about Flow anomaly detection |
| CO5 | Understand the concepts of | CLO 18 | Explain State Graphs and state testing |
| | transitions testing. | CLO 19 | Demonstrate about the Testability Tips. |
| | | CLO 20 | Explain finite state behavior in state graphs |

XV. SYLLABUS

| UNIT-1 | INTRODUCTION TO TESTING | | | | | | |
|---|--|--|--|--|--|--|--|
| Introduction: Purpose of testing, dichotomies, model for testing, consequences of bugs, taxonomy of bugs. Flow graphs and path testing: Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing. | | | | | | | |
| UNIT-11 | TRANSACTION FLOW TESTING | | | | | | |
| Transaction flow dataflow testing, | testing: Transaction flows, transaction flow testing techniques, dataflow testing, basics of strategies in dataflow testing, application of dataflow testing. | | | | | | |
| UNIT-III | LEVELS OF TESTING | | | | | | |
| Domain testing: domain and inter Logic based test | Domains and paths, nice and ugly domains, domain testing, domains and interfaces testing, face testing, domains and testability. ting: Overview, decision tables, path expressions, kv charts, and specifications. | | | | | | |
| UNIT-IV | PATH PRODUCTS | | | | | | |
| Paths, path produced applications, reg | ucts and regular expressions: Path products and path expression, reduction procedure, ular expressions and flow anomaly detection. | | | | | | |
| UNIT-V | TRANSITION TESTING | | | | | | |
| State, state graph tips. | hs and transition testing: State graphs, good and bad state graphs, state testing, testability | | | | | | |
