

## COMPUTER ORGANIZATION AND ARCHITECTURE

<b>III Semester: CSE / IT / CSIT / CSE (AI&amp;ML) / CSE (DS) / CSE (CS)</b>																				
Course Code	Category	Hours / Week			Credits	Maximum Marks														
ACSC07	Core	L	T	P	C	CIA	SEE	Total												
		3	0	0	3	30	70	100												
<b>Contact Classes: 45</b>	<b>Tutorial Classes: Nil</b>	<b>Practical Classes: Nil</b>			<b>Total Classes: 45</b>															
<b>Prerequisites: Programming For Problem Solving</b>																				
<p><b>I. COURSE OVERVIEW:</b>                      This course introduces the principles of basic computer organization, CPU organization, and the basic architecture concepts. The course emphasizes performance and cost analysis, instruction set design, register transfer languages, arithmetic, logic and shift micro operations, pipelining, memory technology, memory hierarchy, virtual memory management, and I/O organization of computer, parallel processing and inter process communication and synchronization.</p> <p><b>II. COURSE OBJECTIVES:</b>  <b>The students will try to learn:</b></p> <ol style="list-style-type: none"> <li>Understand the organization and architecture of computer systems and electronic computers.</li> <li>Study the assembly language program execution, instruction format and instruction cycle.</li> <li>Design a simple computer using hardwired and micro-programmed control methods.</li> <li>Study the basic components of computer systems besides the computer arithmetic.</li> <li>Understand input-output organization, memory organization and management, and pipelining.</li> </ol> <p><b>III. COURSE OUTCOMES:</b>  <b>After successful completion of the course, students should be able to:</b></p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 80%;">CO 1 <b>Illustrate</b> interaction of components in a computer system with functional units and levels of programming languages.</td> <td style="width: 20%; text-align: right;">Understand</td> </tr> <tr> <td>CO 2 <b>Demonstrate</b> the implementation of micro-operations with the help of register transfer language and electronic circuits.</td> <td style="text-align: right;">Understand</td> </tr> <tr> <td>CO 3 <b>Identify</b> appropriate addressing modes for specifying the location of an operand.</td> <td style="text-align: right;">Apply</td> </tr> <tr> <td>CO 4 <b>Make use of</b> number system for data representation and binary arithmetic in digital computers.</td> <td style="text-align: right;">Apply</td> </tr> <tr> <td>CO 5 <b>Interpret</b> the design of hardwired and micro-programmed control unit for execution of micro programs.</td> <td style="text-align: right;">Understand</td> </tr> <tr> <td>CO 6 <b>Summarize</b> the concepts of pipelining and inter-process communication for advanced processor design.</td> <td style="text-align: right;">Understand</td> </tr> </table> <p><b>IV. SYLLABUS:</b></p> <p><b>MODULE – I: INTRODUCTION TO COMPUTER ORGANIZATION</b>                      Basic computer organization, CPU organization, memory subsystem organization and interfacing, input or output subsystem organization and interfacing, a simple computer levels of programming languages, assembly language instructions, instruction set architecture design, a simple instruction set architecture.</p> <p><b>MODULE – II: ORGANIZATION OF A COMPUTER</b>                      Register transfer: Register transfer language, register transfer, bus and memory transfers, arithmetic micro operations, logic micro operations, shift micro operations; Control unit: Control memory, address sequencing, micro program example, and design of control unit.</p> <p><b>MODULE – III: CPU AND COMPUTER ARITHMETIC</b>                      CPU design: Instruction cycle, data representation, memory reference instructions, input-output, and interrupt,</p>									CO 1 <b>Illustrate</b> interaction of components in a computer system with functional units and levels of programming languages.	Understand	CO 2 <b>Demonstrate</b> the implementation of micro-operations with the help of register transfer language and electronic circuits.	Understand	CO 3 <b>Identify</b> appropriate addressing modes for specifying the location of an operand.	Apply	CO 4 <b>Make use of</b> number system for data representation and binary arithmetic in digital computers.	Apply	CO 5 <b>Interpret</b> the design of hardwired and micro-programmed control unit for execution of micro programs.	Understand	CO 6 <b>Summarize</b> the concepts of pipelining and inter-process communication for advanced processor design.	Understand
CO 1 <b>Illustrate</b> interaction of components in a computer system with functional units and levels of programming languages.	Understand																			
CO 2 <b>Demonstrate</b> the implementation of micro-operations with the help of register transfer language and electronic circuits.	Understand																			
CO 3 <b>Identify</b> appropriate addressing modes for specifying the location of an operand.	Apply																			
CO 4 <b>Make use of</b> number system for data representation and binary arithmetic in digital computers.	Apply																			
CO 5 <b>Interpret</b> the design of hardwired and micro-programmed control unit for execution of micro programs.	Understand																			
CO 6 <b>Summarize</b> the concepts of pipelining and inter-process communication for advanced processor design.	Understand
