

## ELECTRICAL POWER GENERATION SYSTEMS

<b>IV Semester: EEE</b>								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
AEEC10	Core	L	T	P	C	CIA	SEE	Total
		3	1	0	4	30	70	100
<b>Contact Classes: 45</b>		<b>Tutorial Classes: 15</b>		<b>Practical Classes: Nil</b>			<b>Total Classes: 60</b>	
<b>Prerequisite:</b> Electrical Circuits (AEEC02), Electromagnetic Fields ()								
<b>I. COURSE OVERVIEW:</b>								
<p>This course provides ability to recognize, analyze and troubleshoot different elements in electric power generation systems. It deals with conventional energy systems like thermal and nuclear power stations. This course also introduces non-conventional energy systems like solar energy (radiation, collection, storage, and application), Hydro and Wind energy. This course will also discuss some environmental impacts of power generation and also look at alternative and sustainable energy resources.</p>								
<b>II. COURSE OBJECTIVES:</b>								
<b>The students will try to learn:</b>								
<ul style="list-style-type: none"> <li>I The fundamental concepts of power generation and gain knowledge about the different renewable and non-renewable energy sources.</li> <li>II Thorough theory on the construction and working principle of thermal, hydro-electric, nuclear and gas power plants.</li> <li>III The key aspects in solar and wind power energy systems and analyze their environmental aspects in the present-day scenario to obtain clean energy.</li> <li>IV The various factors affecting cost of generations and the different Tariff methods for electrical energy consumption to attain optimum utilization of generated electrical energy.</li> <li>V The ability to incorporate the knowledge of electrical power generation in working with minor and major projects and to take up research work in future.</li> </ul>								
<b>III. COURSE OUTCOMES:</b>								
<b>After successful completion of the course, students should be able to:</b>								
CO 1	Explain the operating principle of thermal and nuclear power stations to evaluate the significance.			Understand				
CO 2	Elucidate the working principle and layout of hydroelectric power station (HPS) along with its multi-purpose utility.			Understand				
CO 3	Paraphrase the solar power generation using photovoltaic effect and its applications.			Understand				
CO 4	Explain the working principle of wind energy system (WES), types of turbines and the importance of WES.			Understand				
CO 5	Maintain the optimized working of wind power plants.			Apply				
CO 6	Interpret the effect of role of tariff on the cost of power generation.			Apply				
<b>IV. SYLLABUS:</b>								
<b>MODULE-I: CONVENTIONAL POWER GENERATION SYSTEMS (09)</b>								
<p>Thermal Power Stations: Evaluation of power systems, present day scenario, Line diagram of thermal power station (TPS) showing paths of coal, steam, water, air, ash and flue gasses; Brief description of TPS components: Economizers, boilers, super heaters, turbines, condensers, chimney and cooling towers. Nuclear power stations: Nuclear fission and chain reaction, nuclear fuels, principle of operation of nuclear reactor, reactor components, moderators, control rods, reflectors and coolants, radiation hazards, shielding and safety precautions, types of nuclear reactors and brief description of PWR, BWR and FBR; Gas power stations: Principle of operation and components (Block diagram approach only).</p>								
<b>MODULE-II: HYDROELECTRIC POWER STATIONS (09)</b>								
<p>Hydroelectric Power Stations: Elements of hydro electric power station, types, concept of pumped storage plants, storage requirements, mass curve (explanation only), estimation of power developed from a given catchment area,</p>								

heads and efficiencies; Hydraulic turbines: Classification of turbines, impulse and reaction turbines, Pelton wheel, Francis turbine and Kaplan turbine, working proportions, work done, efficiencies, hydraulic design, draft tube theory, functions and efficiency.

### **MODULE-III: SOLAR ENERGY (09)**

Solar radiation: Environmental impact of solar power, physics of the sun, solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on tilted surface, instruments for measuring solar radiation, solar radiation data, solar concentrators, collectors, thermal applications, design of standalone solar systems, simple problems.

Photovoltaic systems: Photovoltaic effect, semiconducting materials, band gap theory, photo emission of electrons, cell configuration, types of solar cells, cell properties, device physics, electrostatic field across the depletion layer, voltage developed, I-V characteristics, module structure and fabrication, output power and efficiency, fill factor, maximum power point tracking (MPPT), solar grid connected inverters, simple problems.

### **MODULE-IV: WIND ENERGY (09)**

Wind energy: Sources and potential, power from wind, Betz criterion, components of wind energy conversion system, types of turbines, horizontal and vertical axis wind turbines, aerodynamics, momentum theory (actuator disk concept), operational characteristics, blade element theory, types of generating systems for wind energy, permanent magnet generators, DC generators, induction generators, doubly fed induction generators, applications of wind energy, safety and environmental aspects, simple problems.

### **MODULE-V: ECONOMIC ASPECTS OF POWER GENERATION (09)**

Terms commonly used in system operation, various factors affecting cost of generations; load curves, connected load, maximum demand, peak load, base load and peak load power plants, load factors, plant capacity factor, plant use factor, demand factors, diversity factor, cost of power plant, tariffs.

### **V. TEXT BOOKS:**

1. C L Wadhawa, "Generation, Distribution and Utilization of Electrical Energy", New Age International Limited, New Delhi, 3<sup>rd</sup> Edition, 2005.
2. G D Rai, "Non-Conventional Energy Sources", Khanna Publishers, 1<sup>st</sup> Edition, 2011.
3. G N Tiwari, M K Ghosal, "Fundamentals of Renewable Energy Sources", Narosa Publications, New Delhi, 1<sup>st</sup> Edition, 2007.
4. Chetan Singh Solanki, "Solar Photovoltaics", PHI Publications, 2<sup>nd</sup> Edition, 2011.
5. M L Soni, P V Gupta, U S Bhatnagar and A Chakraborti, "A text book on Power system engineering", Dhanpat Rai and Co. Pvt. Ltd, 1999.

### **VI. REFERENCE BOOKS:**

1. J B Gupta, "A Course in Electrical Power", S K Kataria and Sons, New Delhi, 15<sup>th</sup> Edition, 2013.
2. M V Deshpande, "Elements of Power Station design", Prentice Hall India Learning Private Limited, New Delhi, 1<sup>st</sup> Edition, 1992.
3. Mukund R Patel, "Wind and Solar Power Systems", CRC Press, 1<sup>st</sup> Edition, 1999.
4. V K Mehta and Rohit Mehta, "Principle of Power Systems", S Chand & Company, Ltd, New Delhi, 3<sup>rd</sup> Edition, 2005.
