ELECTRICAL CIRCUITS LABORATORY
LAB MANUAL

Year : 2016 - 2017
Subject Code : AEE102
Regulations : R16
Class : I B.Tech II Semester
Branch : ECE / EEE

Prepared by

Mr.P.Sridhar (Professor/HOD)    Mr.T.Anil kumar (Associate Professor)
Mr.G.Hari krishna (Assistant Professor)    Mr.A.Naresh kumar (Assistant Professor)

Electrical and Electronics Engineering

INSTITUTE OF AERONAUTICAL ENGINEERING
(Autonomous)
Dundigal, Hyderabad - 500 043
### Program Outcomes

| PO1 | Engineering knowledge: | Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
| PO2 | Problem analysis: | Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences |
| PO3 | Design/development of solutions: | Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO4 | Conduct investigations of complex problems: | Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO5 | Modern tool usage: | Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations. |
| PO6 | The engineer and society: | Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO7 | Environment and sustainability: | Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO8 | Ethics: | Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO9 | Individual and team work: | Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO10 | Communication: | Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO11 | Life-long learning: | Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |
| PO12 | Project management and finance: | Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |

### Program Specific Outcomes

| PSO1 | Professional Skills: | Able to utilize the knowledge of high voltage engineering in collaboration with power systems in innovative, dynamic and challenging environment, for the research based team work. |
| PSO2 | Problem - Solving Skills: | To explore the scientific theories, ideas, methodologies and the new cutting edge technologies in renewable energy engineering, and use this erudition in their professional development and gain sufficient competence to solve the current and future energy problems universally. |
| PSO3 | Successful Career and Entrepreneurship: | To be able to utilize of technologies like PLC, PMC, process controllers, transducers and HMI and design, install, test, and maintain power systems and industrial applications. |

ELECTRICAL CIRCUITS LABORATORY

OBJECTIVE:

The objective of the Electrical Circuits lab is to expose the students to the of electrical circuits and give them experimental skill. The purpose of lab experiment is to continue to build circuit construction skills using different circuit element. It also aims to introduce MATLAB a circuit simulation software tool. It enables the students to gain sufficient knowledge on the programming and simulation of Electrical circuits,

OUTCOMES:

Upon the completion of Electrical Circuit and simulation practical course, the student will be able to attain the following:

1. Familiarity with DC and AC circuit analysis techniques.
2. Analyze complicated circuits using different network theorems.
3. Acquire skills of using MATLAB software for electrical circuit studies.
4. Determine the self and mutual inductance of coupled coils.
EXPERIMENT - 1

(A) VERIFICATION OF KVL AND KCL

1.1 AIM:
To verify Kirchhoff’s Voltage Law (KVL) and Kirchhoff’s Current Law (KCL) in a Passive Resistive Network.

1.2 APPARATUS:

<table>
<thead>
<tr>
<th>S. No</th>
<th>Apparatus Name</th>
<th>Range</th>

</tr>
</tbody>
</table>

1.3 CIRCUIT DIAGRAMS:

**Figure – 1.1 Verification of KVL**

**Figure – 1.2 Verification of KCL**
1.4 **PROCEDURE:**

**To Verify KVL**

1. Connect the circuit diagram as shown in Figure 1.
2. Switch ON the supply to RPS.
3. Apply the voltage (say 5V) and note the voltmeter readings.
4. Gradually increase the supply voltage in steps.
5. Note the readings of voltmeters.
6. Sum up the voltmeter readings (voltage drops), that should be equal to applied voltage.
7. Thus KVL is Verified practically.

**To Verify KCL**

1. Connect the circuit diagram as shown in Figure 2.
2. Switch ON the supply to RPS.
3. Apply the voltage (say 5V) and note the Ammeter readings.
4. Gradually increase the supply voltage in steps.
5. Note the readings of Ammeters.
6. Sum up the Ammeter readings ($I_1$ and $I_2$), that should be equal to total current ($I$).
7. Thus KCL is Verified practically.

1.5 **OBSERVATIONS:**

**For KVL**

<table>

1.13 RESULT:

1.14 PRE LAB VIVA QUESTIONS:

1. Define current.
2. Define voltage.
3. What is resistance?
4. Define ohm’s law.
5. State KCL and KVL.

1.15 POST LAB VIVA QUESTIONS:

1. What do you mean by junction?
2. Derive current division rule.
3. Explain the sign conventions.
4. Explain the color coding of resistors.
EXPERIMENT - 2
(A) MESH ANALYSIS

2.1 AIM
The study of mesh analysis is the objective of this exercise, specifically its usage in multi-source DC circuits. Its application in finding circuit currents and voltages will be investigated.

2.2 APPARATUS:

<table>
<thead>
<tr>
<th>S.No.</th>
<th>Equipment</th>

<tr>
<td>5.</td>
<td>Connecting Wires</td>
<td></td>
<td></td>
<td>required</td>
</tr>
</tbody>
</table>

2.3 THEORY:
Multi-source DC circuits may be analyzed using a mesh current technique. The process involves identifying a minimum number of small loops such that every component exists in at least one loop. KVL is then applied to each loop. The loop currents are referred to as mesh currents as each current interlocks or meshes with the surrounding loop currents. As a result there will be a set of simultaneous equations created, an unknown mesh current for each loop. Once the mesh currents are determined, various branch currents and component voltages may be derived.

2.4 CIRCUIT DIAGRAM:

![Circuit Diagram](image)

Figure – 2.1 Mesh analyses

2.5 PROCEDURE
1. Connect the circuit diagram as shown in Figure 2.1.
2. Switch ON the supply to RPS.
3. Apply the voltage (say 15v).
4. Gradually increase the supply voltage in steps.
5. Connect ammeters in the loop and find the currents $I_1$, $I_2$ and $I_3$.
6. Verify the practical results obtained with theoretical results

2.6 OBSERVATIONS:

<table>

<td>Theoretical</td>
</tr>
</tbody>
</table>

2.13 RESULT

2.14 PRE LAB VIVA QUESTIONS:

1. On which law is the mesh analysis based?
2. What is mesh analysis?
3. When do we go for super mesh analysis?
4. What is the equation for determining the number of independent loop equations in mesh current method?

2.15 POST LAB VIVA QUESTIONS:

1. How do we calculate branch currents from loop currents?
2. How do we calculate branch voltages from loop currents?
EXPERIMENT - 3

(A) NODAL ANALYSIS

3.1 AIM

The study of nodal analysis is the objective of this exercise, specifically its usage in multi-source DC circuits. Its application in finding circuit node voltages will be investigated.

3.2 APPARATUS:

<table>
<thead>
<tr>
<th>S.No.</th>
<th>Equipment</th>

<tr>
<td>5.</td>
<td>Connecting Wires</td>
<td>-</td>
<td>-</td>
<td>required</td>
</tr>
</tbody>
</table>

3.3 THEORY:

In electric circuits analysis, nodal analysis, node-voltage analysis, or the branch current method is a method of determining the voltage (potential difference) between "nodes" (points where elements or branches connect) in an electrical circuit in terms of the branch currents.

3.4 CIRCUIT DIAGRAM:

![Figure – 3.1 Nodal analysis](image-url)
3.5 **PROCEDURE**

1. Connect the circuit diagram as shown in Figure 3.1.
2. Switch ON the supply to RPS.
3. Apply the voltage (say 15v) and note the voltmeter readings.
4. Gradually increase the supply voltage in steps.
5. Note the readings of voltmeters.
6. Verify the practical results obtained with theoretical results.

3.6 **OBSERVATIONS:**

<table>
<thead>
<tr>
<th>Applied Voltage V (volts)</th>
<th>Node voltage(v_1)</th>
<th>Node voltage(v_2)</th>
<th>Node voltage(v_3)</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

3.14 RESULT:

3.15 PRE LAB VIVA QUESTIONS:

1. On which law is the nodal analysis based?
2. What is nodal analysis?
3. When do we, go for super-node analysis?

3.16 POST LAB VIVA QUESTIONS:

1. Define node.
2. Is nodal analysis is applicable to both dc and ac supply?
3. How do we calculate branch currents from node voltages?
4. How do we calculate branch voltages from node voltages?
EXPERIMENT - 4

AVERAGE VALUE, RMS VALUE, FORM FACTOR, PEAK FACTOR OF SINUSOIDAL WAVE, SQUARE WAVE

4.1 AIM:

To determine the average value, RMS value, form factor, peak factor of sinusoidal wave, square wave.

</tbody>
</table>

4.3 THEORY:

In alternating current (AC, also ac) the movement (or flow) of electric charge periodically reverses direction. An electric charge would for instance move forward, then backward, then forward, then backward, over and over again. In direct current (DC), the movement (or flow) of electric charge is only in one direction.

**Average value:** Average value of an alternating quantity is expressed as the ratio of area covered by wave form to distance of the wave form.

**Root Mean Square (RMS) Value:** The RMS value of an alternating current is expressed by that steady DC current which when flowing through a given circuit for given time produces same heat as produced by that AC through the same circuit for the same time period. In the common case of alternating current when \( i(t) \) is a sinusoidal current, as is approximately true for mains power, the RMS value is easy to calculate from the continuous case equation above. If we define \( I_p \) to be the peak current, then in general form

\[
I_{\text{RMS}} = \sqrt{\frac{1}{T_2 - T_1} \int_{T_1}^{T_2} (I_p \sin(\omega t))^2 dt}.
\]

Where \( t \) is time and \( \omega \) is the angular frequency \((\omega = 2\pi / T, \text{where } T \text{ is the period of the wave})\).

For a sinusoidal voltage,

\[
V_{\text{rms}} = \frac{V_{\text{peak}}}{\sqrt{2}}.
\]
The factor is called the crest factor, which varies for different waveforms. For a triangle wave form centered about zero.

\[ V_{\text{rms}} = \frac{V_{\text{peak}}}{\sqrt{3}}. \]

For a square wave form centered about zero

RMS (Root Mean Square) value of an ac wave is the mean of the root of the square of the voltages at different instants. For an ac wave it will be \( 1/\sqrt{2} \) times the peak value.

### 4.4 CIRCUIT DIAGRAM:

![Circuit Diagram](image)

**Fig – 4.1 Basic Circuit**

### 4.5 PROCEDURE:

1. Connect the circuit as shown in the circuit diagram of fig. 4.1.
2. Set the value of frequency say 100 Hz in the function generator.
3. Adjust the ground of channel 1 and 2 of Cathode Ray Oscilloscope and then set it into DC mode.
4. Connect CRO across the load in DC mode and observe the waveform. Adjust the DC offset of function generator.
5. Note down the amplitude and frequency.
6. Set the multimeter into AC mode and measure input voltage and voltage across point AB. This value gives RMS value of sinusoidal AC.
7. Calculate the average value.
8. Repeat experiment for different frequency and different peak to peak voltage.
9. Measure the RMS and Average value of DC signal also where instead of function generator you can use DC supply.
4.5 OBSERVATIONS & CALCULATIONS:

<table>
<thead>
<tr>
<th>Peak value</th>
<th>RMS value</th>
<th>Average value</th>
</tr>
</thead>
<tbody>
<tr>

</table>

4.13 RESULT:

4.14 PRE LAB VIVA QUESTIONS:
1. What is complex wave?
2. Define Instantaneous value.
3. Why RMS value is not calculated for DC quantity?
4. Define RMS Value.
5. What is the expression for form factor and peak factor?

4.15 POST LAB VIVA QUESTIONS:
1. What is RMS value of Sin wave?
2. Why RMS value is specified for alternating Quantity?
3. Why average value is calculated for half cycle for an sine wave?
4. Define form factor and peak factor for an alternating wave.
EXPERIMENT - 5

(A) VERIFICATION OF SUPERPOSITION THEOREM

5.1 AIM:

To Verify principle of Superposition theoretically and practically.

STATEMENT:

In a linear, bilateral network the response in any element is equal to sum of individual responses while all other sources are non-operative.

5.2 APPARATUS:

Fig- 5.1 Both Voltage Sources are acting ($V_1$ & $V_2$)  
Fig - 5.2 Voltage Source $V_1$ is acting alone

Fig - 5.3 Voltage Source $V_2$ is acting alone

5.4 PROCEDURE:

1. Connect the circuit as shown in figure (5.1) and note down the current flowing through $R_3$ and let it be $I$.
2. Connect the circuit as shown in figure (5.2) and note down the ammeter Reading, and let it be $I_1$.
3. Connect the circuit as shown in figure (5.3) and note down the ammeter reading, and let it be $I_2$.
4. Verify for $I=I_1+I_2$. 

5. Compare the practical and theoretical currents.

5.11 **PROCEDURE:**
1. Make the connections as shown in the circuit diagram by using MATLAB Simulink.
2. Measure the current in each circuit using current measurement.
3. Verify with the theoretical results obtained with practical results.

5.12 **RESULT:**

5.13 **PRE LAB VIVA QUESTIONS:**
1. State Superposition theorem.
2. How to find power using Superposition theorem?
3. Write applications of superposition theorem.

5.14 **POST LAB VIVA QUESTIONS:**
1. Is it possible to apply Superposition theorem to nonlinear circuit?
2. Is it possible to apply Superposition theorem to ac as well as dc circuit?
EXPERIMENT – 6

(A) VERIFICATION OF RECIPROCITY THEOREM

6.1 AIM:
To verify the condition of Reciprocity for an electric network.

6.2 STATEMENT
In any linear, bilateral, single source network the ratio of excitation to response is constant even when their positions are inter-changed.

6.3 APPARATUS:

<table>
<thead>
<tr>
<th>S. No.</th>

6.12 **PROCEDURE:**

1. Make the connections as shown in the circuit-6.4&6.5 diagram by using MATLAB Simulink.
3. Measure response current in the resistor in 10 ohms circuit-6.5.
4. Verify the reciprocity theorem.
6.13 **PRE LAB VIVA QUESTIONS:**
1. State reciprocity theorem.
2. Is it possible to apply both theorems to ac as well as dc circuit?
3. Is Reciprocity applicable for unilateral and bilateral networks?

6.14 **LAB ASSIGNMENT:**
1. State and prove reciprocity theorem.
2. State applications of reciprocity theorem.

6.15 **POST LAB VIVA QUESTIONS:**
1. Comment on the applicability of reciprocity theorem on the type of network.
2. Is reciprocity theorem applicable for networks with current source?

EXPERIMENT – 7

(A) VERIFICATION OF MAXIMUM POWER TRANSFER THEOREM

7.1 AIM:
To design the load resistor which absorbs maximum power from source.

7.2 STATEMENT:
The maximum power transfer theorem states that maximum power is delivered from a source to an load resistance when the load resistance is equal to source resistance. (RL = Rs is the condition required for maximum power transfer).

7.3 CIRCUIT DIAGRAM:

Fig – 7.1 Maximum Power Transfer Circuit

7.4 PROCEDURE:
1. Connect the circuit as shown in fig.7.1
2. Vary the load resistance in steps and note down voltage across the load and current flowing through the circuit.
3. Calculate power delivered to the load by using formula P=VI.
4. Draw the graph between resistance and power (resistance on X-axis and power on Y-axis).
5. Verify the maximum power is delivered to the load when RL = Rs for DC.

Fig – 8.5 Measurement of $I_L$ ($I_L = \frac{V_{TH} \text{ or } V_{OC}}{R_{TH} + R_L}$)

8.12 PROCEDURE:

1. Make the connections as shown in the circuit-8.4 diagram by using MATLAB Simulink.
2. Measure the open circuit voltage across the load terminals using voltage measurement.
3. Connect circuit fig 8.5 Thevenin’s equivalent circuit in MATLAB and find the load current.

8.12 RESULT:

8.13 PRE LAB VIVA QUESTIONS:

1. What is load resistance?
2. How will you calculate Thevenin’s resistance $R_{TH}$?
3. How will you calculate Thevenin’s voltage $V_{TH}$?
4. How will you calculate load current $I_L$?
8.14 LAB ASSIGNMENT:
1. Solve the theoretical value of Thevenin’s theorem for different circuits.
2. Solve the theoretical value of Thevenin’s resistance for different circuits.

8.15 POST LAB VIVA QUESTIONS:
1. Write the applications of Thevenin’s theorem.
2. Write the limitations of Thevenin’s theorem.
EXPERIMENT - 9

(A) VERIFICATION OF NORTON’S THEOREM

9.1 AIM:
To Verify Norton’s theorem.

9.2 STATEMENT
Any linear, bilateral network with current sources, voltage sources and resistances can be replaced by an equivalent circuit consisting of a current source in parallel with a resistance. The value of the current source is the current flowing through the short circuit terminals of the network and the resistance is the equivalent resistance measured between the open circuit terminals of the network with all the energy sources replaced by their internal resistances.

9.9 CIRCUIT DIAGRAMS:

Fig-9.4 Norton’s current in MATLAB

Fig-9.5 Load current in MATLAB
9.9  **PROCEDURE:**
1. Make the connections as shown in the circuit-9.4 diagram by using MATLAB Simulink.
2. Measure the short circuit current through the load terminals using current measurement.
3. Connect circuit fig 9.5 Norton’s equivalent circuit in MATLAB and find the load current.

9.10  **PRECAUTIONS:**
1. Check for proper connections before switching ON the supply
2. Make sure of proper color coding of resistors
3. The terminal of the resistance should be properly connected

9.11  **RESULT:**

9.12  **PRE LAB VIVA QUESTIONS:**
1. State Norton’s theorem.
2. Define \( R_N \).
3. Define \( I_N \).

9.13  **LAB ASSIGNMENT:**
1. State and prove Norton’s theorem.
2. Derive the value of \( R_N \).
3. Find Norton’s equivalent resistance from the circuit having dependent source?

9.14  **POST LAB VIVA QUESTIONS:**
1. Convert Thevenin’s equivalent into Norton’s equivalent.
2. Is it possible to apply Norton’s theorem ac as well as dc circuit?
3. What are the applications of Norton’s theorem?
EXPERIMENT – 10
(A) VERIFICATION OF COMPENSATION THEOREM

10.1 AIM:
To verify the compensation theorem and to determine the change in current.

10.2 APPARATUS:

<table>
<thead>
<tr>
<th>S. No.</th>
<th>Name of the Equipment</th>
<th>Range</th>
<th>Type</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

10.3 STATEMENT
Compensation theorem states that any element in electrical network can be replaced by its equivalent voltage source, whose value is equal to product of current flowing through it and its value. (Compensation theorem got the importance of determining the change in current flowing through element or circuit because of change in the resistance value).

10.4 CIRCUIT DIAGRAM:

Fig – 10.1 Basic Circuit

Fig – 10.2 After change in resistance circuit

Fig -10.3 Compensation Theorem Circuit
10.5 PROCEDURE:

1. Connect the circuit as shown in fig10.1.
2. Measure the current I.
3. Connect the circuit as shown in fig10.2. by increasing the circuit resistance(ΔR),
   Measure the current I1.
4. The change in current in the circuit can be found by connecting a voltage source equal to I1ΔR as shown in fig10.3.
5. Measure the current I" i.e., the change in current.
6. Observe that I"= I- I1.

2. Using fig.10.4 find the current flowing through original circuit.
3. Using fig 10.5 find current flowing through the change in resistance.
4. Using fig10.6 find the changed current.

10.11 PRECAUTIONS:
1. Check for proper connections before switching ON the supply
2. Make sure of proper color coding of resistors
3. The terminal of the resistance should be properly connected

10.12 RESULT:
10.13 PRE LAB VIVA QUESTIONS:
1. What is Compensation theorem?
2. Is it possible to apply compensation theorem to ac as well as dc circuit?
3. Is Compensation theorem applicable for unilateral and bilateral networks?

10.14 LAB ASSIGNMENT:
1. State and prove Compensation theorem.
2. Give the importance of Compensation theorem.

10.15 POST LAB VIVA QUESTIONS:
1. Which condition is required to apply the Compensation theorem for the circuit?
2. Comment on the applicability of Compensation theorem on the type of network.
3. Give the importance of compensation theorem.
EXPERIMENT – 11

A) VERIFICATION OF MILLIMAN'S THEOREM

11.1 AIM:

To verify the Millman’s Theorem.

11.2 STATEMENT:

This theorem states that in any network, if the voltage sources V1,V2,……Vn in series with their internal resistances R1,R2…. Rn respectively are in parallel, then these sources may be replaced by a single voltage source V' in series-with R1.

\[ V' = \frac{V_1G_1+V_2G_2+-----V_nG_n}{G_1+G_2+-----G_n} \]

\[ R_1 = \frac{1}{G_1+G_2+-----G_n} \]

12.3 CIRCUIT DIAGRAM:

![Series Resonance Circuit Diagram](image)

Fig – 12.1 Series Resonance

12.4 PROCEDURE:

1. Connect the circuit as shown in fig.12.1 for series resonant circuit
2. Set the voltage of the signal from function generator to 10V.
3. Vary the frequency of the signal in steps and note down the magnitude of response on CRO respectively. (response wave form is observed across element R)
4. Form the observation table between the frequency and magnitude of response in CRO for series resonance circuit.
5. Draw a graph between frequency and magnitude of response on the semi-log sheet and determine the resonant frequency, quality factor and bandwidth of series RLC circuit.
12.5 THEORETICAL CALCULATIONS:

Series Resonance

- Resonant Frequency \( f_r \) = \( 1/(2\pi\sqrt{LC}) \)
- Lower cut off frequency \( f_1 \) = \( f_r - \frac{R}{4\pi L} \)
- Upper cut off frequency \( f_2 \) = \( f_r + \frac{R}{4\pi L} \)
- Quality factor \( Q_r = \frac{\omega_r L}{R} = \frac{1}{\omega_r RC} \)
- Band Width \( f_2 - f_1 = \frac{R}{2\pi L} \)

</tbody>
</table>

12.11 THEORY:

A circuit is said to be in resonance when applied voltage V and current I are in phase with each other. Thus at resonance condition, the equivalent complex impedance of the circuit consists of only resistance (R) and hence current is maximum. Since V and I are in phase, the power factor is unity.

The complex impedance

\[ Z = R + j (XL - XC) \]

Where \( XL = \omega L \)

\( XC = \frac{1}{\omega C} \)

At resonance, \( XL = XC \) and hence \( Z = R \)

**Bandwidth of a Resonance Circuit:**

Bandwidth of a circuit is given by the band of frequencies which lies between two points on either side of resonance frequency, where current falls through \( 1/1.414 \) of the maximum value of resonance. Narrow is the bandwidth, higher the selectivity of the circuit. As shown in the model graph, the bandwidth AB is given by \( f2 - f1 \). \( f1 \) is the lower cut off frequency and \( f2 \) is the upper cut off frequency

12.12 CIRCUIT DIAGRAM:

![Fig – 12.3 Series Resonance simulation diagram](image-url)
12.13 PROCEDURE:
1. Open a new MATLAB/SIMULINK model
2. Connect the circuit as shown in the figure
3. Debug and run the circuit
4. By double clicking the powergui plot the value of current for the different values of frequencies

12.15 PROGRAM RESULT:
enter the resistance value----->100
enter the inductance value------>10e-3
enter the capacitance value----->0.1*10^-6
enter the input voltage------->10
12.16 **PRE LAB VIVA QUESTIONS:**

1. Define resonance.
2. Give condition for series resonance.
3. Define band width.
4. Define quality factor.
5. What is the importance of quality factor?

12.17 **LAB ASSIGNMENT:**

1. Define quality factor and give expression for it.
2. Give the application of series resonance circuit.

12.18 **POST LAB VIVA QUESTIONS:**

1. Define series resonance.
2. Define magnification.
3. What is the power factor under resonant condition?
EXPERIMENT – 13

(A) VERIFICATION OF PARALLEL RESONANCE

13.1 AIM:

To design the resonant frequency, quality factor and band width of a parallel resonant circuit.

13.2 APPARATUS:

<table>

13.3 CIRCUIT DIAGRAM:

![Fig – 13.1 Parallel Resonance](image)

13.4 PROCEDURE:

1. Connect the circuit as shown in fig.2 for parallel resonant circuit.
2. Set the voltage of the signal from function generator to 10V.
3. Vary the frequency of the signal in steps and note down the magnitude of response on CRO respectively. (response wave form is observed across element R)
4. Form the observation table between the frequency and magnitude of response in CRO firstly for parallel resonance circuit.
5. Draw a graph between frequency and magnitude of response on the semi-log sheet and determine the resonant frequency, quality factor and bandwidth of parallel RLC circuit.

13.5 THEORETICAL CALCULATIONS:
Parallel Resonance

Resonant Frequency \( (f_r) = \frac{1}{(2\pi\sqrt{LC})} \)

Lower cut off frequency \( (f_1) = f_r - \frac{1}{4}\pi RC \) Upper

cut off frequency \( (f_2) = f_r + \frac{1}{4}\pi RC \) Quality

factor \( Q_r = \frac{\omega_r CR}{f_r/\text{B.W}} \)

Band Width \( f_2 - f_1 = \frac{1}{2\pi RC} \)

13.6 TABULAR COLUMN:

<tr>
<th>S. No</th>
<th>SOFTWARE USED</th>
<th>DESK TOP QUANTITY</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>MATLAB</td>
<td>01</td>
</tr>
</tbody>
</table>

13.11 **THEORY:**

A circuit is said to be in resonance when applied voltage $V$ and current $I$ are in phase with each other. Thus at resonance condition, the equivalent complex impedance of the circuit consists of only resistance ($R$) and hence current is maximum. Since $V$ and $I$ are in phase, the power factor is unity. The complex impedance

$$Z = R + j(XL - XC)$$

Where $XL = \omega L$

$XC = 1/\omega C$

At resonance, $XL = XC$ and hence $Z = R$

**Bandwidth of a Resonance Circuit:**

Bandwidth of a circuit is given by the band of frequencies which lies between two points on either side of resonance frequency, where current falls through $1/\sqrt{2}$ of the maximum value of resonance. Narrow is the bandwidth, higher the selectivity of the circuit. As shown in the model graph, the bandwidth $AB$ is given by $f_2 - f_1$. $f_1$ is the lower cut off frequency and $f_2$ is the upper cut off frequency.

13.12 **PROCEDURE:**

1. Open a new MATLAB/SIMULINK model.
2. Connect the circuit as shown in the figure 13.3.
3. Debug and run the circuit.
4. By double clicking the powergui plot the value of current for the different values of frequencies.
13.13 SIMULATION DIAGRAM FOR PARALLEL RESONANCE:

![Parallel Resonance Diagram]

**Fig - 13.3 Parallel Resonance**

13.14 MODEL GRAPH FOR PARALLEL RESONANCE

![Model Graph]

To obtain the graphs of frequency vs. BL, frequency vs. BC, frequency vs. admittance and frequency vs. current vary frequency in steps for the given circuit and find the resonant frequency and check by theoretical calculations.

\[ R = 1000\, \Omega, \quad C = 400 \, \text{mF}, \quad L = 1 \, \text{H}, \quad V = 50\, \text{V} \]

vary frequency in steps of 1 Hz using Matlab.
13.15 %PROGRAM TO FIND THE PARALLEL RESONANCE

14.3 CIRCUIT DIAGRAM

Fig – 14.1 Circuit Diagram of self Inductance of Coil 1

Fig – 14.2 Circuit Diagram of self Inductance of Coil 2
14.4 PROCEDURE:

1. Connect the circuit as shown in fig.14.1 and measure the self inductance of coil 1 i.e. L₁ by noting the voltmeter and ammeter readings.
2. Connect the circuit as shown in fig.14.2 and measure the self inductance of coil 2 i.e. L₂ by noting the voltmeter and ammeter readings.
3. Connect the circuit as shown fig.14.3 and note down voltmeter (V) and ammeter (A) readings and determine equivalent inductance Leq.
4. Calculate coefficient of coupling.

14.5 THEORETICAL CALCULATIONS:
(Neglect winding resistance)

Leq = L₁ +L₂±2M

Mutual Inductance 
M = [(Leq – (L₁+L₂))/2]

Coefficient of Coupling 
K = M/√(L₁L₂)

Where L₁ and L₂ are determined as follows

**Determination of L₁**

From fig.14.1

\[ XL₁ = \text{voltmeter reading / ammeter reading} \]

\[ XL₁ = \omega L₁ = 2\pi f L₁ \]

\[ L₁ = XL₁/2\pi f \text{ (Henry)} \]

**Determination of L₂**

From fig.14.2

\[ XL₂ = \text{Voltmeter reading / Ammeter reading} \]

\[ XL₂ = \omega L₂ = 2\pi f L₂ \]

\[ L₂ = XL₂/2\pi f \text{ (Henry)} \]
Determination of $\text{Leq}$

From fig 14.3

$\text{XLeq} = \text{Voltmeter reading} / \text{Ammeter reading}$

$\text{XLeq} = \omega \text{Leq} = 2\pi f \text{Leq}$

$\text{Leq} = \text{XLeq} / 2\pi f \text{ (Henry)}$

14.6 TABULAR COLUMN:

</tbody>
</table>

14.7 RESULT:
14.8 PRE LAB VIVA QUESTIONS:
1. What is self inductance?
2. What is mutual inductance?
3. Define coefficient of coupling.
4. What is the formula for coefficient of coupling?
5. Define self induced emf.
6. Define mutually induced emf.

14.9 LAB ASSIGNMENT:
1. Derive the expression between self inductance of two coils, mutual inductance between them and coefficient of coupling.
2. State and explain Faraday’s law of electromagnetic induction.
3. Two coils of self inductances L1 and L2 are connected in series and M is the mutual inductance between them, derive the expression for the net inductance of the coil.

14.10 POST LAB VIVA QUESTIONS:
1. Using dot convention, discuss the coupling in a simple magnetic circuit?
2. What is statically induce emf and dynamically induce emf?
3. Compare electric and magnetic circuit.
4. What is Lenz’s law?
