

## LINUX PROGRAMMING LABORATORY

<b>VI Semester: CSE</b>								
Course Code	Category	Hours / Week			Credits	Maximum Marks		
ACS109	Core	L	T	P	C	CIA	SEE	Total
		-	-	3	2	30	70	100
<b>Contact Classes: Nil</b>	<b>Tutorial Classes: Nil</b>	<b>Practical Classes: 39</b>			<b>Total Classes: 39</b>			
<p><b>OBJECTIVES:</b>  <b>The course should enable the students to:</b></p> <ol style="list-style-type: none"> <li>Analyze the Linux utilities and Linux environment.</li> <li>Learn the fundamentals of shells scripting/programming.</li> <li>Understand the basic Linux administration.</li> <li>Implement inter process communication and management concepts.</li> </ol> <p><b>COURSE OUTCOMES(COs):</b></p> <p>CO1 Identify and use Linux utilities to create and manage simple file processing operations, organize directory structures with appropriate security.</p> <p>CO2 Work confidently in Linux environment.</p> <p>CO3 Work with shell script to automate different tasks as Linux.</p> <p>CO4 Illustrate file processing operations such as standard I/O and formatted I/O.</p> <p>CO5 Design various client server applications using TCP or UDP protocols.</p> <p><b>COURSE LEARNING OUTCOMES (CLOs):</b>  <b>The students should enable to:</b></p> <ol style="list-style-type: none"> <li>Learn the importance of Linux architecture along with features.</li> <li>Identify and use linux utilities to create and manage simple file processing operations</li> <li>Apply the security features on file access permissions by restricting the ownership using advance linux commands.</li> <li>Implement the SED, GREP and AWK commands for pattern matching and mathematical functions.</li> <li>Understand the shell responsibilities of different types of shells.</li> <li>Develop shell scripts to perform more complex tasks in shell programming environment.</li> <li>Illustrate file processing operations such as standard I/O and formatted I/O.</li> <li>Understand process structure, scheduling and management through system calls.</li> <li>Generalize signal functions to handle interrupts by using system calls.</li> <li>Illustrate memory management of file handling through file/region lock</li> <li>Design and implement inter process communication (IPC) in client server environment by using pipe, message queues, named Pipes,</li> <li>Illustrate client server authenticated communication in IPC through semaphores and shared memory.</li> <li>Demonstrate various client server applications on network using TCP or UDP protocols. Design custom-based network applications using the sockets interface in heterogeneous platforms.</li> </ol>								

<b>LIST OF EXPERIMENTS</b>	
<b>Week-1</b>	<b>GENERAL PURPOSE UTILITIES COMMANDS</b>
<p>Learning installation and upgradation of the Linux operating system.            Basic Linux commands: User and session management commands: useradd, groupadd, userdel, groupdel, passwd; General purpose utilities: echo, printf, bc, who, whoami, tty, uname, clear, ls.</p>	
<b>Week-2</b>	<b>FILE SYSTEM, TEXT PROCESSING COMMANDS AND VI EDITOR</b>
<p>Linux commands: cat-create a file, append a file and open a file. file, wc, cp, rm, mv, more, head, tail, gzip, gunzip. vi editor- commands, navigation commands and creating a vi editor file.</p>	
<b>Week-3</b>	<b>SED, GREP, EGREP, FGREP</b>
<ol style="list-style-type: none"> <li>1. Finding a file containing a particular textstring</li> <li>2. Regular expressions in grepcommand.</li> <li>3. Search multiple words / string pattern using grep command on bashshell</li> <li>4. Illustrate by writing script that will print, message-Hello World, in Bold and Blink effect, and in different colors like red, brown etc using echo commands.</li> <li>5. Write a program that will output the desired patterns               <pre>1 2 2 3 3 3 4 4 4 4 5 5 5 5 5</pre> </li> </ol>	
<b>Week-4</b>	<b>BASIC SHELL SCRIPTING</b>
<ol style="list-style-type: none"> <li>1. Write a shell script that accepts a file name, starting and ending line numbers as arguments and displays all the lines between the given line numbers.</li> <li>2. Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.</li> <li>3. Write a shell script that displays a list of all the files in the current directory to which the user has read, write and execute permissions.</li> </ol>	
<b>Week-5</b>	<b>SHELL SCRIPTING</b>
<ol style="list-style-type: none"> <li>1. Write a program to generate Fibonacci series</li> <li>2. Write a program to check whether given string is palindrome or not</li> <li>3. Write a shell script to find factorial of a given integer.</li> </ol>	
<b>Week-6</b>	<b>INPUT OUTPUT REDIRECTIONS AND COMMAND SUBSTITUTIONS</b>
<ol style="list-style-type: none"> <li>1. Write a shell script that receives any number of file names as arguments, checks if every argument supplied is a file or a directory and reports accordingly. Whenever the argument is a file, the number of lines on it is also reported.</li> <li>2. Write a shell script that accepts a list of file names as its arguments, counts and reports the occurrence of each word that is present in the first argument file on other argument files.</li> <li>3. Write a shell script to list all of the directory files in a directory.</li> </ol>	

<b>Week-7</b>	<b>AWK SCRIPT</b>
<ol style="list-style-type: none"> <li>1. Write an awk script to count the number of lines in a file that do not contain vowels.</li> <li>2. Write an awk script to find the number of characters, words and lines in a file.</li> <li>3. Write an awk script to calculate average marks of each student.</li> <li>4. Write an awk script to replace a string in a file.</li> </ol>	
<b>Week-8</b>	<b>PATTERN SCANNING AND PROCESSING SCRIPTS</b>
<ol style="list-style-type: none"> <li>1. Write a C program that makes a copy of a file using standard I/O and system calls.</li> <li>2. Illustrate to redirect the standard input (stdin) and the standard output (stdout) of a process, so that scanf().</li> <li>3. Write an reads from the pipe and printf () writes into the pipe.</li> </ol>	
<b>Week-9</b>	<b>PATTERN SCANNING AND PROCESSING SCRIPTS</b>
<ol style="list-style-type: none"> <li>1. Write a program that takes one or more file/directory names as command line input and reports the following information on the file. A. File type. B. Number of links. C. Time of last access. D. Read, write and execute permissions.</li> <li>2. Write a C program to emulate the Unix ls -l command.</li> <li>3. Write a C program to list for every file in a directory, its inode number and filename.</li> </ol>	
<b>Week-10</b>	<b>PROCESS ATTRIBUTES AND USAGE OF FORK()</b>
<ol style="list-style-type: none"> <li>1. Write a C program to create a child process and allow the parent to display -parent and the child to display -child on the screen.</li> <li>2. Write a C program to create a zombie process.</li> <li>3. Write a C program that illustrates how an orphan is created.</li> </ol>	
<b>Week-11</b>	<b>USAGE OF PIPES AND NAMED PIPES</b>
<ol style="list-style-type: none"> <li>1. Write a C program that illustrates how to execute two commands concurrently with a command pipe. Ex:- ls -l   sort</li> <li>2. Write C programs that illustrate communication between two unrelated processes using named pipe.</li> <li>3. Write a C program to create a message queue with read and write permissions to write 3 messages to it</li> </ol>	
<b>Week-12</b>	<b>SYNCHRONIZATION AND LOCKING TECHNIQUES</b>
<ol style="list-style-type: none"> <li>1. Write a C program to allow cooperating processes to lock a resource for exclusive use, using a) Semaphores b) flock or lockf system calls.</li> <li>2. Write a C program that illustrates suspending and resuming processes using signals.</li> <li>3. Write a C program that implements a producer-consumer system with two processes.(using Semaphores).</li> </ol>	
<b>Week-13</b>	<b>CLIENT SEVER IMPLEMENTATION USING SOCKETS AND SHARED MEMORY</b>
<ol style="list-style-type: none"> <li>1. Write client and server programs (using c) for interaction between server and client processes using Unix domain sockets.</li> <li>2. Write client and server programs (using c) for interaction between server and client processes using Internet domain sockets.</li> <li>3. Write a C program that illustrates two processes communicating using shared memory.</li> <li>4.</li> </ol>
