Dundigal, Hyderabad - 500 043

MECHANICAL ENGINEERING

TUTORIAL QUESTION BANK

Course Title	OPERATIONS RESEARCH
Course Code	AME021
Class	B.Tech
Semester	VIII
Year	2019-2020
Team of Instructors	Mr. C. Labesh Kumar, Assistant Professor, ME Mrs. T. Vanaja Assistant Professor, ME

COURSE OBJECTIVES

S.NO	Description
I	Formulate the mathematical model of real time problem for optimization.
II	Establish the problem formulation by using linear, dynamic programming, game theory and queuing models.
III	Apply stochastic models for discrete and continuous variables to control inventory.
IV	Visualize the computer based manufacturing simulation models.

COURSE OUTCOMES: (COs)

S.NO	Description
I	Formulate the mathematical model of real time problem for optimization, using Linear programming
II	Establish the problem formulation by using transportation, assignment models
III	Apply sequencing for flow and replacement for maintenance of machines programming, game theory and queuing models.
IV	Formulate game theory model and apply stochastic models for discrete and continuous variables to control inventory.
V	Formulate queuing models and visualize dynamic programming and simulation models

COURSE LEARNING OUTCOMES: (CLOs)

Students, who complete the course, will have demonstrated the ability to do the following:

S. No.	Outcomes
AME021.01	Understand the characteristics, phases, types of operation research models and its applications.
AME021.02	Visualize modeling principles scope, decision making, general methods for solving OR models.
AME021.03	Understand linear programming concept problem formulation and graphical models.
AME021.04	Understand simplex method and artificial variable techniques.
AME021.05	Comprehend two-phase method and Big-M method of linear programming.
AME021.06	Apply to build and solve transportation models of balanced.
AME021.07	Understand the degeneracy model problem of transportation, unbalanced type-aximization.
AME021.08	Apply to build assignment models for optimal solution.
AME021.09	Understand variants of assignment model and travelling salesman model.
AME021.10	Understand the flow shop sequencing model of 'n' jobs through two machines and three machines.
AME021.11	Comprehend job shop sequencing of two jobs through 'm' machines.
AME021.12	Understand the concept of replacement of items that deteriorate with time when money value is not counted
AME013.13	Understand the concept of replacement of items that deteriorate with time when money value is n counted .
AME021.14	Visualize the replacement of items that fail completely and group replacement.
AME021.15	Understand minmax (maximini) criterion, optimal strategy, solution of games with saddle point
AME021.16	Visualize dominance principle while solving game theory problem.
AME021.17	Apply to solve $m \times 2, 2 \times n$ model of games and graphical method.
AME021.18	Understand the concepts of deterministic inventory model and purchase inventory model with one price break and multiple price breaks.

AME021.19	Visualize stochastic inventory models – demand may be discrete variable or continuous variable.
AME021.20	Understand the concepts of waiting line model of single channel and multi server model.
AME021.21	Visualize dynamic programming concepts and models
AME021.22	Comprehend the simulation models, phases of simulation, application of simulation
AME021.23	Visualize the application of simulation for inventory and queuing problems.

S. No.	Question	Blooms Taxonomy Level	Course Outcomes	Course Learning Outcomes (CLOs)
UNIT-I				
Part A (Very Short Answer Questions)				
1	Explain scope of operations Research?	Understand	CO 1	AME021.01
2	State the applications of operations Research?	Remember	CO 1	AME021.02
3	List different characteristics of operations Research?	Remember	CO 1	AME021.02
4	Write about physical model of operations Research?	Understand	CO 1	AME021.02
5	Describe about simulation models of operations Research?	Understand	CO 1	AME021.03
6	Discuss the importance of operations Research in the decision making process?	Remember	CO 1	AME021.03
7	List out the principles of modeling.	Remember	CO 1	AME021.03
8	State the methods of solving OR models.	Understand	CO 1	AME021.03
9	Define model and explain its importance.	Remember	CO 1	AME021.03
10	Define feasible region?	Understand	CO 1	AME021.03
11	Explain general representation of LPP?	Remember	CO 1	AME021.03
12	Discuss objective function in brief?	Understand	CO 1	AME021.03
13	Describe optimal solution?	Remember	CO 1	AME021.03
14	Explain about decision variables?	Understand	CO 1	AME021.03
15	Describe about non- negativity constraints?	Remember	CO 1	AME021.03
16	Explain about constraints of a LPP?	Understand	CO 1	AME021.03
17	Define slack variables with examples?	Remember	CO 1	AME021.03
18	State surplus variables with examples?	Understand	CO 1	AME021.03
19	Explain about artificial variables?	Remember	CO 1	AME021.03
20	Explain computational steps of Big-M method	Remember	CO 1	AME021.03
Part B (Long Answer Questions)				
1	What are the phases of Operations Research and briefly explain them?	understand	CO 1	AME021.03
2	Explain the main characteristics of Operations Research.		CO 1	AME021.03
3	What is a model? List the various classification schemes of Operations Research models.	Remember	CO 1	AME021.03
4	Describe the scope of Operations Research.	Understand	CO 1	AME021.03
5	Explain general methods for solving OR models	Understand	CO 1	AME021.03
6	Describe the terminology involved in formulating a linear programming problem?	Understand	CO 1	AME021.03
7	Explain applications of LPP in production management?	Remember	CO 1	AME021.03
8	Explain step by step procedure of graphical method of solving Linear Programming Problem.	Understand	CO 1	AME021.03
9	What are the limitations of graphical method?	Understand	CO 1	AME021.03
10	A firm manufactures two types of products A and B and sells them at a profit of Rs 2 on type A and Rs 3 on type B. Each product is processed on two machines G and H. Type A requires one minute of processing time on G and two minutes on H; type B requires one minute on G and one minute on H. The machine G is available for not more than 6 hour 40 minutes while machine H is available for 10 hours during any working day. Formulate the problem as a linear programming problem and find the optimum solution graphically.	Understand	CO 1	AME021.03

11	Explain the structure of an LPP with example?	Remember	CO 1	AME021.03
12	Discuss the algorithm of simplex method to solve an LPP?	Remember	CO 1	AME021.03
13	Explain assumptions to solve LPP using simplex?	Understand	CO 1	AME021.03
14	Solve the following problem by Simplex method Maximize $Z = 5x_1 + 3x_2$ subject to constraints $3x_1 + 5x_2 \leq 15$ $5x_1 + 2x_2 \leq 10$ and $x_1, x_2 \geq 0$	Understand	CO 1	AME021.03
15	Solve the following problem by Simplex method Maximize $Z = x_1 + 3x_2 + 2x_3$ subject to constraints $3x_1 + x_2 + 3x_3 \leq 7$ $-2x_1 + 4x_2 \leq 12$ $-4x_1 + 3x_2 + 8x_3 \leq 10$ and $x_1, x_2 \geq 0$	Remember	CO 1	AME021.03
16	Describe step-by-step procedure to solve LPP by BIG-M method?	Remember	CO 1	AME021.03
17	Explain the term artificial variables? Why do we need them?	Remember	CO 1	AME021.03
18	Describe Two-phase Simplex method	Remember	CO 1	AME021.03
19	Use big -M method to solve the following Maximize $Z = 8x_1 + 5x_2$ Subjective to constraints $2x_1 + 4x_2 \leq 45$ $3x_1 + 2x_2 \leq 40$ $x_1 + x_2 \geq 30$ $x_1, x_2 \geq 0$.	Remember	CO 1	AME021.03
20	Solve the following LP Problem by two phase method Maximize $Z = 5x_1 - 2x_2 + 3x_3$ Subject to constraints $2x_1 + 2x_2 - x_3 \geq 2$, $3x_1 - 4x_2 \leq 3$, $x_2 + 3x_3 \leq 5$ $x_1, x_2, x_3 \geq 0$	Understand	CO 1	AME021.03
Part C(Critical Analytical Questions)				
1	Solve the following LP problem graphically. Maximize $Z = 2x_1 + x_2$ Subjective to constraints $x_1 + 2x_2 \leq 10$ $x_1 + x_2 \leq 6$ $x_1 - x_2 \leq 2$ $x_1 - 2x_2 \leq 1$ $x_1, x_2 \geq 0$.	Understand	CO 1	AME021.03
2	Solve the following LP problem using Simplex method. Maximize $Z = 6x_1 + 8x_2$ subject to constraints $x_1 + x_2 \leq 10$ $2x_1 + 3x_2 \leq 25$ $2x_1 + 5x_2 \leq 35$ and $x_1, x_2 \geq 0$	Understand	CO 1	AME021.03
3	Solve the following LPP by two-phase method Minimize $Z = 3x_1 + 4x_2$ subject to constraints $2x_1 + 3x_2 \geq 8$ $5x_1 + 2x_2 \geq 12$ and $x_1, x_2 \geq 0$		CO 1	AME021.03
4	Solve the following LPP by Big-M (penalty) method Minimize $Z = 5x_1 + 3x_2$ subject to constraints $2x_1 + 4x_2 \leq 12$ $2x_1 + 2x_2 \leq 10$ $5x_1 + 2x_2 \leq 10$ and $x_1, x_2 \geq 0$	Remember	CO 1	AME021.03
5	Solve the following LPP by Big-M method Maximize $Z = 4x_1 + 5x_2 + x_3$ subject to constraints $x_1 + x_2 + x_3 = 10$ $2x_1 - x_2 \geq 1$ $2x_1 + 3x_2 + x_3 \leq 40$ $x_1, x_2, x_3 \geq 0$	Understand	CO 1	AME021.03

UNIT – II

Part A(Very Short Answer Questions)

S. No.	Question	Blooms Taxonomy Level	Course Outcomes	Course Learning Outcomes (CLOs)
1	Explain mathematical model of a transportation problem?	Understand	CO 2	AME021.06
2	What are different methods of solving transportation problems to get basic feasible solution?	Remember	CO 2	AME021.07
3	Why is LCM is optimal than NWCR in solving transportation problem?	Understand	CO 2	AME021.06
4	Why does Vogel’s approximation method provide a good initial feasible solution?	Remember	CO 2	AME021.08
5	What are the methods to test for optimality in transportation problem?	Understand	CO 2	AME021.07
6	Describe balanced problem in transportation?	Understand	CO 2	AME021.08
7	Explain MODI method in brief?	Understand	CO 2	AME021.07
8	What is degeneracy in transportation problem?	Remember	CO 2	AME021.09
9	Define unbalance problem in transportation?	Remember	CO 2	AME021.08
10	Explain how the unbalanced problem is solved?	Remember	CO 2	AME021.09
11	Explain constraints of a transportation problem?	Remember	CO 2	AME021.09
12	What is assignment problem?	Understand	CO 2	AME021.09
13	Explain applications of assignment problem?	Remember	CO 2	AME021.08
14	Give the mathematical representation of an assignment problem	Understand	CO 2	AME021.09
15	Discuss the method of solving assignment problems?	Understand	CO 2	AME021.08
16	Explain an algorithm to solve an assignment problem?	Understand	CO 2	AME021.09
17	Describe Hungarian method?	Remember	CO 2	AME021.06
18	Explain Principle of dominance?	Remember	CO 2	AME021.07
19	Explain unbalanced assignment problem?	Understand	CO 2	AME021.07
20	Discuss travelling sales man problem?	Remember	CO 2	AME021.07

Part B (Long Answer Questions)

1	Discuss different methods of finding initial basic feasible solution.	Remember	CO 2	AME021.08																															
2	Explain Practical Steps Involved in Solving minimization type Transportation Problems.		CO 2	AME021.07																															
3	<p>A Company has three plants at locations A,B and C which supply to warehouses located at D,E,F,G and H. monthly plant capacities are 800,500 and 900 respectively. Monthly warehouse requirements are 400, 500,400 and 800 units respectively. Unit transportation cost in rupees is given below.</p> <table border="1" style="margin-left: 40px;"> <thead> <tr> <th colspan="2" rowspan="2"></th> <th colspan="5">Ware houses</th> </tr> <tr> <th>D</th> <th>E</th> <th>F</th> <th>G</th> <th>H</th> </tr> </thead> <tbody> <tr> <th rowspan="3">Plant</th> <th>A</th> <td>5</td> <td>8</td> <td>6</td> <td>6</td> <td>3</td> </tr> <tr> <th>B</th> <td>4</td> <td>7</td> <td>7</td> <td>6</td> <td>5</td> </tr> <tr> <th>C</th> <td>8</td> <td>4</td> <td>6</td> <td>6</td> <td>4</td> </tr> </tbody> </table> <p>Determine an optimum distribution for the company in order to minimize the total transportation cost.</p>			Ware houses					D	E	F	G	H	Plant	A	5	8	6	6	3	B	4	7	7	6	5	C	8	4	6	6	4	Understand	CO 2	AME021.08

	determine at what age a replacement is due?											
6	Machine A costs Rs:45,000 and it's operating costs are estimated to be Rs:1,000 for the first year increasing by Rs:10,000 per year in the second year and subsequent years .Machine B costs Rs:50,000 and operating cost are Rs:2,000 for the first year and increasing by Rs:4,000 in the second and subsequent years. If at present we have a machine of type A, should we replace it with B? If so when? Assume both machines have no resale value and these future costs are not discounted?									Understand	CO 3	AME021.13
7	Let the value of the money be assumed be 10% per year and suppose that the machine A is replaced after every three years whereas machine B is replaced every six years .The yearly cost in (Rs) of both the machines are given below.									Remember	CO 3	AME021.13
	Year	1	2	3	4	5	6					
	Machine A	1000	200	400	1000	200	400					
	Machine B	1700	100	200	300	400	500					
	Determine which Machine should be purchased?											
8	A firm is considering the replacement of a machine, whose cost price is Rs.12, 200 and its scrap value is Rs.200. From experience the running (Maintenance and operating) costs are found to be as follows.									Understand	CO 3	AME021.14
	Year	1	2	3	4	5	6	7	8			
	Running cost (Rs)	200	500	800	1200	1800	2500	3200	4000			
	When the machine should be replaced.											
9	Explain briefly individual replacement policy and Group replacement of items that fail completely (suddenly)									Remember	CO 3	AME021.14
10	The management of a large hotel is considering the periodic replacement of light bulbs fitted in it's room .There are 500 rooms in the hotel and each room has 6 bulbs. The management is now following the policy of replacing the bulbs as they fail at the total cost of Rs:3 per bulb .The management feels that this cost can be reduced to Rs:1 by adopting the group replacement method. On the basis of the information given below, evaluate the alternative and make a recommendation to the management.									Understand	CO 3	AME021.13
Part C (Critical Analytical Questions)												
1	A manufacturer is offered two machines A and B. A is priced at Rs 5000 and running costs are estimated at Rs 800 for each of the first five years, increasing by Rs. 200 per year in the sixth and subsequent years. Machine B, which has the same capacity as A, costs Rs 2500 but will have running costs of Rs 1200 per year for six years, increasing by Rs 200 per year thereafter. If money is worth 10% per year, which machine should be purchased? (Assume that machines will eventually sold for scrap at a negligible price.)									Remember	CO 3	AME021.14
2	The data collected in running a Machine the cost of which is Rs:60,000 are given below									Understand	CO 3	AME021.14
		1	2	3	4							
	Resale value(Rs)	42,000	30,000	20,400	14,400							
	Cost of Spares(Rs)	9,650	4,000	4,270	4,880	5,700						
	Cost of Labour	6,800	14,000	16,000	18,000	21,000						
		25,000										
	Find the time when the machine should be replaced?											
3	A manual stamper currently valued at RS 1000 is expected to last 2 years and costs Rs 4000 per year to operate. An automatic stamper									Remember	CO 3	AME021.14

	which can be purchased for Rs 3000 will last for 4 years and can be operated at an annual cost of Rs 3000. If money carries the rate of interest 10% per year, determine which stamper should be purchased.																	
4	<p>A factory has a large number of bulbs all of which must be in working condition. The morality of the bulbs is given in the following table.</p> <table border="1"> <thead> <tr> <th>week</th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> <th>5</th> <th>6</th> </tr> </thead> <tbody> <tr> <td>Proportion of bulbs failing during the week</td> <td>0.1</td> <td>0.15</td> <td>0.25</td> <td>0.35</td> <td>0.12</td> <td>0.03</td> </tr> </tbody> </table> <p>If a bulb fails in service, it costs Rs3.50 to replace but if all bulbs are replaced at a time it costs Rs 1.20 each. Find the optimum group replacement policy. (Assume 1000 bulbs are available initially).</p>	week	1	2	3	4	5	6	Proportion of bulbs failing during the week	0.1	0.15	0.25	0.35	0.12	0.03	Remember	CO 3	AME021.13
week	1	2	3	4	5	6												
Proportion of bulbs failing during the week	0.1	0.15	0.25	0.35	0.12	0.03												
5	<p>There are 1000 bulbs in use, and it costs Rs 10 to replace an individual bulb which has burn out. If all the bulbs were replaced simultaneously it would cost Rs 4 per bulb. It is proposed to replace all bulbs at fixed intervals of time, whether or not they have burn out, and to continue replacing burnt out bulbs as and when they fail. At what intervals all the bulbs should be replaced. At what group replacement price per bulb would a policy of strictly individual replacement become preferable to the adopted policy.</p>	Understand	CO 3	AME021.13														

UNIT – IV

Part A (Very Short Answer Questions)

12	What is EOQ? Discuss step by step the development of EOQ formula.	Remember	CO 4	AME021.18												
13	A dealer supplies you the following information with regards to an product that he deals in annual demand =10,000 units, ordering cost Rs.10/order, Price Rs.20/unit. Inventory carrying cost is 20% of the value of inventory per year. The dealer is considering the possibility of allowing some back orders to occurs. He has estimated that the annual cost of back ordering will be 25% of the value of inventory. a. What should be the optimum no of units he should buy in 1lot? b. What qty of the product should be allowed to be backordered c. What would be the max qty of inventory at any time of year Would you recommend to allow backordering? If so what would be the annual cost saving by adopting the policy of backordering.	Understand	CO 4	AME021.18												
14	Find the most economic batch quantity of a product on a machine if the production rate of the item on the machine is 300 pieces per day and the demand is uniform at the rate of 150 pieces/day. The set up cost is Rs.300 per batch and the cost of holding one item in inventory is Rs.0.81/per day. How will the batch quantity vary if the machine production rate was infinite?	Understand	CO 4	AME021.17												
15	The annual demand of a product is 10,000 units. Each unit costs Rs 100 if the orders are placed in quantities below 200 units. For orders above 200 or above, however the price is Rs 95. The annual inventory holding cost is 10% of the value of the item and the ordering cost is Rs 5/order. Find the economic lot size.	Remember	CO 4	AME021.17												
16	The production department of a company required 3,600kg of raw material for manufacturing a particular item per year. It has been estimated that the cost of placing an order is Rs.36 and the cost of carrying inventory is 25% of the investment in the inventories, the price is Rs.10/kg. help the purchase manager to determine and ordering policy for raw material, determine optimal lot size.	Understand	CO 4	AME021.18												
17	Monthly demand for an item is 200 units. Ordering cost is Rs 3350, inventory carrying charge is 24% of the purchase price per year. The purchase prices are $P_1 = Rs 10$ for purchasing $Q_1 < 500$ $P_2 = Rs 9.25$ for purchasing $500 \leq Q_2 < 750$ $P_3 = Rs 8.75$ for purchasing $750 \leq Q_3$ Determine optimum purchase quantity. If the order cost is reduced to Rs 100 per order, compute the optimum purchase quantity.	Remember	CO 4	AME021.18												
18	Discuss the significance of stochastic models in inventory control of production system?	Remember	CO 4	AME021.18												
19	What are inventory models? Enumerate various types of inventory models and describe them briefly.	Remember	CO 4	AME021.18												
20	A shop is about to order some heaters for a forecast spell of cold weather. The shop pays Rs.1000 for each heater and during the cold spell they sell for Rs2000 each. The demand for the heater declines after the cold spell is ones and any unsold units are sold at Rs.500 previous experience suggests the likely demand for heater is as follows. <table border="1" data-bbox="279 1832 922 1910"> <tr> <td>Demand</td> <td>10</td> <td>20</td> <td>30</td> <td>40</td> <td>50</td> </tr> <tr> <td>Probability</td> <td>0.20</td> <td>0.30</td> <td>0.30</td> <td>0.10</td> <td>0.10</td> </tr> </table> How many heaters should the shop owner buy?	Demand	10	20	30	40	50	Probability	0.20	0.30	0.30	0.10	0.10	Understand	CO 4	AME021.18

1	Define the terms Balking, Reneging, Jockeying.	Remember	CO 5	AME021.22
2	Explain the terms single server and multiple server queue length and finite and infinite queue length.	Remember	CO 5	AME021.22
3	Define simulation why simulation uses. Give one application area when this technique is used in practice.	Understand	CO 5	AME021.21
4	Explain what factors must be considered when designing simulation experiment.	Remember	CO 5	AME021.22
5	Discuss briefly the types of simulations?	Remember	CO 5	AME021.22
6	A road transport company has one reservation clerk on duty at a time. He handles information of bus schedules and makes reservations customers arrive at a rate of 8 per hour and the clerk can, on an average, service 12 customers per hour. After starting your assumptions determine. a. What is the average number of customer waiting for the service of the clerk b. What is the average time a customer has to wait before being used?	Remember	CO 5	AME021.22
7	Consider a single semen queuing system with poisons input and exponential service times. Suppose that mean arrival rate is 3 calling units per hour, the expected service time is 0.25 hours and the maximum permissible calling units is the system is two. Derive the steady state probability distribution of the number of calling units in the system. And then calculate the expected number in the system.	Understand	CO 5	AME021.22
8	A super market has two girls ringing up sales at the counters. If the service time for each customer is exponential with mean 4 minutes, and if people arrive 3 in a poison fashion at the 10/hour. a. What is the probability of having to wait for the service. b. What is the expected percentage of idle time for each girl? c. C. find the average length and average number of units in the system.	Remember	CO 5	AME021.22
9	Explain the application of Queuing systems?	Remember	CO 5	AME021.22
10	In a departmental store one cashier is there to serve the customers. And the customers pick up their needs by themselves the arrival rate is 9 customers for every 5 minutes and the cashier can serve 10 customers in 5 minutes. Assuming poisons arrival rate and exponential distribution for service rate. Find following: a. Average number of customers in the system b. Average number of customers in the queue of average queue length? c. Average time a customer spends in the systems d. Average time a customer waits before being served.	Understand	CO 5	AME021.22
11	Explain the advantages and disadvantages of simulation?	Understand	CO 5	AME021.23
12	A television repairman finds that the time spent on his jobs has an exponential distribution with a mean of 30 minutes. If he repairs the sets in the order in which they came in, and if the arrival of sets follows a Poisson distribution with an approximate average rate of 10 per 8hour day, what is the repairman's expected idle time each day? How many jobs are ahead of the average, set just brought in?		CO 5	AME021.23
13	What is simulation? Discuss application of simulation?	Understand	CO 5	AME021.20
14	Discuss the advantages and disadvantages of simulation.	Understand	CO 5	AME021.22
15	Explain briefly steps of simulation process.	Understand	CO 5	AME021.23
16	Explain types of simulation.	Understand	CO 5	AME021.23
17	Explain Monte Carlo simulation.	Remember	CO 5	AME021.23

18	what is simulation and discuss the What types of simulation?	Understand	CO 5	AME021.03																				
19	Explain computer simulation?	Understand	CO 5	AME021.23																				
20	write the applications of simulation.	Understand	CO23	AME021.23																				
Part C (Critical Analytical Questions)																								
1	Customers arrive at box office windows being manned by a single individual, according to a Poisson input process with a mean rate of 20/hr. the time required to serve a customer has an exponential distribution with a mean of 90 sec. Find the average waiting time of customers. Also determine the average number of customers in the system and average queue length.	Understand	CO 5	AME021.23																				
2	At a certain petrol pump, customers arrive according to a poisson process with an average time of 5 minutes between arrivals. The service time is exponentially distributed with mean time of minutes. On the basis of information find out a. What would be the average queue length? b. What would be the average number of customers in the queueing system? c. What is the average time spent by a car in the petrol pump? d. What is the average waiting time of a car before receiving petrol?	Remember	CO 5	AME021.22																				
3	A company manufactures around 200 mopeds. Depending upon the availability of raw materials and other conditions. The daily production has been varying from 196 mopeds to 204 mopeds. Whose probability distribution are given below: <table border="1" data-bbox="240 947 954 1088"> <tr> <td>Production per day</td> <td>196</td> <td>197</td> <td>198</td> <td>199</td> <td>200</td> <td>201</td> <td>202</td> <td>203</td> <td>204</td> </tr> <tr> <td>Probability</td> <td>0.05</td> <td>0.09</td> <td>0.12</td> <td>0.14</td> <td>0.20</td> <td>0.15</td> <td>0.11</td> <td>0.08</td> <td>0.06</td> </tr> </table> Finished mopeds are transported to a lorry that can accommodate only 200 mopeds. Random numbers are 82,89,78,24,53,61,18,45,04,23,50,77,54 and 10. Simulate the mopeds waiting.	Production per day	196	197	198	199	200	201	202	203	204	Probability	0.05	0.09	0.12	0.14	0.20	0.15	0.11	0.08	0.06	Remember	CO 5	AME021.23
Production per day	196	197	198	199	200	201	202	203	204															
Probability	0.05	0.09	0.12	0.14	0.20	0.15	0.11	0.08	0.06															
4	A bakery keeps stock of a popular brand of cake. Previous experience show the daily demand pattern for the item with associated probabilities as givenbelow: <table border="1" data-bbox="240 1344 970 1478"> <tr> <td>Daily demand (number)</td> <td>0</td> <td>10</td> <td>20</td> <td>30</td> <td>40</td> <td>50</td> </tr> <tr> <td>Probability</td> <td>0.01</td> <td>0.20</td> <td>0.15</td> <td>0.50</td> <td>0.12</td> <td>0.03</td> </tr> </table> use the following sequence of random numbers to simulate the demand for next 10days. Random numbers: 25,39,65,76,12,05,73,89,19,49 Also estimate the daily average demand for the cakes on the basis of the simulated data.	Daily demand (number)	0	10	20	30	40	50	Probability	0.01	0.20	0.15	0.50	0.12	0.03	Understand	CO 5	AME021.22						
Daily demand (number)	0	10	20	30	40	50																		
Probability	0.01	0.20	0.15	0.50	0.12	0.03																		
5	Explain in detail application of simulation for inventory models.	Under stand	CO 5	AME021.22
