## INSTITUTE OF AERONAUTICAL ENGINEERING

(Autonomous)
Dundigal, Hyderabad - 500043

INFORMATION TECHNOLOGY
TUTORIAL QUESTION BANK

| Course Name | AUTOMATA AND COMPILER DESIGN |
| :--- | :--- |
| Course Code | A50513 |
| Class | III B. Tech I Semester |
| Branch | Information Technology |
| Year | $2017-2018$ |
| Course Coordinator | Mr. D Rahul, Assistant Professor |
| Course Faculty | Mr. D Rahul, Assistant Professor |

## OBJECTIVES

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited.

In line with this, Faculty of Institute of Aeronautical Engineering, Hyderabad has taken a lead in incorporating philosophy of outcome based education in the process of problem solving and career development. So, all students of the institute should understand the depth and approach of course to be taught through this question bank, which will enhance learners learning process.

| S. No. | Questions | Bloom's <br> Taxonomy <br> Level | Course <br> Outcome |
| :---: | :--- | :---: | :---: |
| PNIT-I |  |  |  |
| PART - A (SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Define DFA with example | Remember | 1 |
| 2 | Explain transition diagram, transition table with example | Remember | 1 |
| 3 | Define Kleene closure. | Remember | 1 |
| 4 | Explain the different Operations on the languages | Remember | 1 |
| 5 | Define NFA with example | Remember | 1 |

| S. No. | Questions | Bloom's Taxonomy Level | Course <br> Outcome |
| :---: | :---: | :---: | :---: |
| 6 | Write any four differences between DFA and NFA | Remember | 1 |
| 7 | List any two applications of finite automata | Remember | 1 |
| 8 | Define regular expression with example | Understand | 1 |
| 9 | List any four identity rules | Understand | 1 |
| 10 | Define Complier | Understand | 1 |
| 11 | List the phases of a compiler | Understand | 1 |
| 12 | Explain a lexeme and define regular sets | Remember | 1 |
| 13 | Define the term Symbol table | Understand | 1 |
| 14 | Define the term Interpreter? | Remember | 1 |
| 15 | Explain about parser and its types | Understand | 1 |
| 16 | Define context free grammar | Remember | 1 |
| 17 | Define a parse tree? | Understand | 1 |
| 18 | Explain an ambiguous grammar with an example | Understand | 1 |
| 19 | List the types of derivations | Understand | 1 |
| 20 | Define LL(K) grammar | Understand | 1 |
| PART - B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Construct a DFA to accept set of all strings ending with 010. <br> Define language over an alphabet and write for the above DFA. | Remember | 1 |
| 2 | Construct a finite automata accepting all the strings over $\{0,1\}$ having even number of 0 's and even number of 1 's. | Remember | 1 |
| 3 | Construct the DFA that accepts/recognizes the language $L(M)=\left\{w \mid w \square \square\{a, b, c\}^{*}\right.$ and $w$ contains the pattern abac \}. Draw the transition table. | Remember | 1 |
| 4 | Differentiate between DFA and NFA with examples | Understand | 1 |
| 5 | Write the DFA that will accept those words from $\square \square \square\{a, b\}$ where the number of a's is divisible by two and the number of $b$ 's is divisible by three. Sketch the transition table of the finite Automaton $M$. | Remember | 1 |

| S. No. | Questions | $\begin{aligned} & \hline \text { Bloom's } \\ & \text { Taxonomy } \\ & \text { Level } \end{aligned}$ | Course Outcome |
| :---: | :---: | :---: | :---: |
| 6 | Construct DFA for the given NFA as shown in fig. below | Remember | 1 |
| 7 | Convert Regular Expression 01* + 1 to Finite Automata. | Understand | 1 |
| 8 | Construct a NFA with $€$ equivalent to the regular expression $10+(0+11) 0^{*} 1$ | Understand | 1 |
| 9 | Define compiler? State various phases of a compiler and explain them in detail. | Understand | 1 |
| 10 | Explain the various phases of a compiler in detail. Also write down the output for the following expression after each phase $\mathrm{a}:=\mathrm{b} * \mathrm{c}-\mathrm{d} .$ | Understand | 1 |
| 11 | Explain the role Lexical Analyzer and issues of Lexical Analyzer. | Remember | 1 |
| 12 | Differentiate the pass and phase in compiler construction? | Remember | 1 |
| 13 | Construct Leftmost Derivation., Rightmost Derivation, Derivation Tree for the following grammar $G=(V, T, P, S)$ with $\begin{gathered} N=\{E\}, S=E, T=\{i d,+, *,(,)\} \\ \mathrm{E} \rightarrow \mathrm{E}+\mathrm{E} \\ \mathrm{E} \rightarrow \mathrm{E} * \mathrm{E} \\ \mathrm{E} \rightarrow(\mathrm{E}) \\ \mathrm{E} \rightarrow \mathrm{id} \end{gathered}$ <br> Obtain id+id*id in right most derivation, left most derivation | Understand | 1 |
| 14 | Write a CFG that generates equal number of a's and b's. | Knowledge | 1 |
| 15 | Construct context free grammar which generates palindrome strings $\sum=\{\mathrm{a}, \mathrm{b}\}$ | Knowledge | 1 |
| 16 | Explain the general format of a LEX program with example? | Understand | 1 |
| 17 | Construct the predictive parser the following grammar: $\begin{gathered} \mathrm{S}->(\mathrm{L}) \mid \mathrm{a} \\ \mathrm{~L}->\mathrm{L}, \mathrm{~S} \mid \mathrm{S} \end{gathered}$ <br> Construct the behavior of the parser on the sentence (a, a) using the grammar specified above | Knowledge | 1 |

| S. No. | Questions | $\begin{gathered} \hline \text { Bloom's } \\ \text { Taxonomy } \\ \text { Level } \\ \hline \end{gathered}$ | Course <br> Outcome |
| :---: | :---: | :---: | :---: |
| 18 | Explain the algorithm for finding the FIRST and FOLLOW positions for a given non-terminal. <br> Consider the grammar, <br> D $\rightarrow$ Type List; <br> List $\rightarrow$ id Tlist <br> Tlist $\rightarrow$,Tlist/ $\varepsilon$ <br> Type $\rightarrow$ int/float <br> Construct a predictive parsing table for the grammar given above. <br> Verify whether the input string id +id * id is accepted by the grammar or not. | Understand | 1 |
| 19 | Explain the algorithm for finding the FIRST and FOLLOW positions for a given non-terminal. <br> Consider the grammar, $\begin{aligned} & \mathrm{E} \rightarrow \mathrm{TE} \\ & \mathrm{E} \rightarrow+\mathrm{TE} \mid \varepsilon \\ & \mathrm{T} \rightarrow \mathrm{FT} \\ & \mathrm{~T} \rightarrow * \mathrm{FT} \mid \varepsilon \\ & \mathrm{F} \rightarrow(\mathrm{E}) \mid \mathrm{id} . \end{aligned}$ <br> Construct a predictive parsing table for the grammar given above. <br> Verify whether the input string id $+\mathrm{id} * \mathrm{id}$ is accepted by the grammar or not. | Understand | 1 |
| 20 | Analyze whether the following grammar is LR(1) or not. Explain your answer with reasons. $\begin{aligned} & S \rightarrow \mathbf{L}, \mathbf{R} \\ & S \rightarrow R \\ & L \rightarrow * R \\ & L \rightarrow \text { id } \\ & R \rightarrow \mathbf{L} . \end{aligned}$ | Knowledge | 1 |
| PART - C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Consider the following fragment of C code: <br> float $\mathrm{i}, \mathrm{j}$; $i=i^{*} 70+j+2$ <br> Write the output at all phases of the compiler for above C code. | Knowledge | 1 |
| 2 | Construct an NFA for regular expression $\mathrm{R}=(\mathrm{aa} \mid \mathrm{b}) * \mathrm{ab}$ convert it into an equivalent DFA. | Remember | 1 |
| 3 | Describe the languages denoted by the following regular expressions. <br> i. $(0+1) * 0(0+1)(0+1)$ <br> ii. $0 * 10 * 10 * 10 *$ | Remember | 1 |

| S. No. | Questions | Bloom's Taxonomy Level | Course Outcome |
| :---: | :---: | :---: | :---: |
| 4 | Explain with one example how LEX program perform lexical analysis for the following PASCAL patterns Identifiers, Comments, Numerical constants, Keywords, Arithmetic operators? | Knowledge | 1 |
| 5 | Check whether the following grammar is a LL(1)grammar $\begin{aligned} & \text { S-> iEtS\|iEtSeS } \mid a \\ & \text { E-> b } \end{aligned}$ <br> Also define the FIRST and FOLLOW. | Knowledge | 1 |
| 6 | Consider the grammar below $\mathrm{E}->\mathrm{E}+\mathrm{E}\|\mathrm{E}-\mathrm{E}\| \mathrm{E} * \mathrm{E}\|\mathrm{E} / \mathrm{E}\| \mathrm{a} \mid \mathrm{b}$ <br> Obtain left most and right most derivation for the string $a+b * a+b$. | Knowledge | 1 |
| 7 | Define ambiguous grammar? Test whether the following grammar is ambiguous or not. <br> $\mathrm{E}->\mathrm{E}+\mathrm{E}\|\mathrm{E}-\mathrm{E}\| \mathrm{E} * \mathrm{E}\|\mathrm{E} / \mathrm{E}\| \mathrm{E} \uparrow\|(\mathrm{E})\|-\mathrm{E} \mid$ id | Knowledge | 1 |
| 8 | State the limitations of recursive descent parser? |  | 1 |
| 9 | Convert the following grammar into LL(1)grammar S->ABC A->aA\|C B->b C->c. | Knowledge | 1 |
| 10 | Write a recursive descent parser for the grammar. <br> bexpr->bexpr or bterm\|bterm <br> bterm->bterm and bfactor\|bfactor <br> bfactor-> notebfactor\|(bexpr)|true|false. <br> Where ,or, and , not,(,),true, false are terminals of the grammar. | Knowledge | 1 |
| UNIT - II |  |  |  |
| PART - A (SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Explain bottom up parsing | Remember | 2 |
| 2 | Define LR(0) items in bottom up parsing | Remember | 2 |
| 3 | List different bottom up parsing techniques | Remember | 2 |
| 4 | Define LR(k) parsing | Understand | 2 |
| 5 | Explain why LR parsing is attractive one and explain | Understand | 2 |
| 6 | Differentiate top down and bottom up parsing | Understand | 2 |
| 7 | Define YACC | Understand | 2 |
| 8 | Define goto function in LR parser with an example | Understand | 2 |
| 9 | Explain types of LR parsers? | Understand | 2 |
| 10 | List down the conflicts during shift-reduce parsing. | Remember | 2 |
| 11 | Define syntax directed translation | Understand | 2 |
| 12 | Define synthesized attribute | Understand | 2 |
| 13 | Define inherited attribute | Understand | 2 |
| 14 | Define abstract syntax tree | Understand | 2 |
| 15 | List the forms of intermediate code | Understand | 2 |

| S. No. | Questions | Bloom's <br> Taxonomy <br> Level | Course <br> Outcome |
| :---: | :--- | :---: | :---: |
| 17 | Define quadruple with example | Understand | 2 |
| 18 | Define triple with example | Understand | 2 |
| 19 | Define indirect triple with example | Understand | 2 |
| 20 | Explain Error recovery in LR parsing | Understand | 2 |
| PART - B (LONG ANSWER QUESTIONS) |  |  |  |

| S. No. | Questions | Bloom's Taxonomy Level | Course <br> Outcome |
| :---: | :---: | :---: | :---: |
| 8 | Consider the grammar given below. $\begin{aligned} & \mathrm{E} \rightarrow \mathrm{E}+\mathrm{T} \\ & \mathrm{E} \rightarrow \mathrm{~T} \\ & \mathrm{~T} \rightarrow \mathrm{~T} * \mathrm{~F} \\ & \mathrm{~T} \rightarrow \mathrm{~F} \\ & \mathrm{~F} \rightarrow(\mathrm{E}) \\ & \mathrm{F} \rightarrow \mathrm{id} \end{aligned}$ <br> Prepare LR parsing table for the above grammar .Give the moves of LR parser on id *id +id | Knowledge | 2 |
| 9 | Explain handle pruning in detail with example | Understand | 2 |
| 10 | Explain S-Attributed and L-Attributed grammars | Understand | 2 |
| 11 | Explain ways to determine precedence relations between pair of terminals | Understand | 2 |
| 12 | Explain types of three address codes | Understand | 2 |
| 13 | Write the quadruple, triple, indirect triple for the statement. $\mathrm{a}:=\mathrm{b} *-\mathrm{c}+\mathrm{b} *$-c | Knowledge | 2 |
| 14 | Define syntax tree? Draw the syntax tree for the assignment statement. a :=b *-c + b *-c | Knowledge | 2 |
| 15 | Explain LR parsers in detail with example | Understand | 2 |
| PART - C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Explain the common conflicts that can be encountered in a shift-reduce parser? | Knowledge | 2 |
| 2 | Explain LALR parsing, justify how it is efficient over SLR parsing. | Remember | 2 |
| 3 | Analyze whether the following grammar is CLR(1) or not. Explain your answer with reasons $\begin{aligned} & \text { S -> L,R } \\ & \text { S->R } \\ & \text { L-> * R } \\ & \text { L-> id } \\ & \text { R -> L. } \end{aligned}$ | Apply | 2 |
| 4 | Analyze whether the following grammar is SLR or not. Explain your answer with reasons $\begin{aligned} & \text { S -> L,R } \\ & \text { S->R } \\ & \text { L-> *R } \\ & \text { L-> id } \\ & \text { R -> L. } \\ & \hline \end{aligned}$ | Apply | 2 |
| 5 | Discuss error recovery in LL and LR parsing. | Remember | 2 |
| 6 | Construct SLR (1) Parsing table for following grammar $\begin{aligned} & \text { s-> xAy/xBy/xAz } \\ & \text { A->as/q } \\ & \text { B->q } \\ & \hline \end{aligned}$ | Remember | 2 |
| 7 | Construct SLR Parsing table for following grammar s->0s0/1s1/10 | Remember | 2 |

| S. No. | Questions | $\begin{gathered} \hline \text { Bloom's } \\ \text { Taxonomy } \\ \text { Level } \\ \hline \end{gathered}$ | Course <br> Outcome |
| :---: | :---: | :---: | :---: |
| 8 | Construct SLR Parsing table for following grammar s->aSbS/bsas/ | Remember | 2 |
| 9 | Construct LALR (1) Parsing table for following grammar s->Aa/bAc/dc/bda $\mathrm{A}->\mathrm{d}$ | Remember | 2 |
| 10 | Construct LALR (1) Parsing table for following grammar $\begin{aligned} & \text { s->Aa/aAc/Bc/bBa } \\ & \text { A->d } \\ & \text { B->d } \end{aligned}$ | Remember | 2 |
| UNIT - III |  |  |  |
| PART - A (SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Define Chomsky hierarchy of languages | Remember |  |
| 2 | List the types of grammars | Remember | 3 |
| 3 | Define Type 0 grammars with example | Remember |  |
| 4 | Define Type 1 grammars with example | Remember | 3 |
| 5 | Define Type 2 grammars with example | Remember | 3 |
| 6 | Define Type 3 grammars with example | Remember | 3 |
| 7 | Define context sensitive grammar with example | Remember | 3 |
| 8 | Define context free grammar with example | Remember | 3 |
| 9 | Define unrestricted grammar with example | Remember | 3 |
| 10 | Define left linear grammar | Remember | 3 |
| 11 | Define right linear grammar | Remember | 3 |
| 12 | Define Regular grammar with example | Remember | 3 |
| 13 | Explain the role of type checker | Remember | 3 |
| 14 | List the different type checking techniques | Remember | 3 |
| 15 | Explain static type checking | Remember | 3 |
| 16 | Explain dynamic type checking | Remember | 3 |
| 17 | Write SDD for type checking of statements | Remember | 3 |
| 18 | Write SDD for type checking of functions | Remember |  |
| 19 | Explain type conversion | Remember | 3 |
| 20 | List different type conversions | Remember | 3 |
| 21 | List advantages and disadvantages of type conversion by programmer | Remember | 3 |
| 22 | Write a short note on type conversion by programmer | Remember | 3 |
| 23 | List advantages and disadvantages of type conversion by compiler | Remember | 3 |
| 24 | Write a short note on type conversion by compiler | Remember | 3 |
| 25 | Define type Expression with example | Remember | 3 |
| 26 | List different user defined type expressions | Remember | 3 |
| 27 | Define type Expression for arrays | Remember | 3 |
| 28 | Define type Expression for functions | Remember | 3 |
| 29 | Define type Expression for records | Remember | 3 |
| 30 | Define type Expression for pointers | Remember | 3 |
| 31 | Explain representation of type expression | Remember | 3 |
| 32 | Define type Expression for products(user defined) | Remember | 3 |
| 33 | Define type system | Remember | 3 |

| S. No. | Questions | $\begin{gathered} \hline \text { Bloom's } \\ \text { Taxonomy } \\ \text { Level } \\ \hline \end{gathered}$ | Course Outcome |
| :---: | :---: | :---: | :---: |
| 34 | Define type graph | Remember | 3 |
| 35 | Explain the importance of function overloading | Remember | 3 |
| 36 | Explain the importance of operator overloading | Remember | 3 |
| 37 | Explain the importance of polymorphism | Remember | 3 |
| 38 | Compare structural equivalence, name equivalence of type expressions | Remember | 3 |
| 39 | Explain importance of equivalence of type expressions | Remember | 3 |
| 40 | Explain equivalence of type expressions | Remember | 3 |
| 41 | Explain structural equivalence of type expressions | Remember | 3 |
| 42 | Explain name equivalence of type expressions | Remember | 3 |
| 43 | Explain role of equivalence of type expressions | Remember | 3 |
| 44 | List the merits and demerits of structural equivalence of type expressions | Remember | 3 |
| 45 | List the merits and demerits of name equivalence of type expressions | Remember | 3 |
| 46 | Define polymorphism | Remember | 3 |
| 47 | Define operator overloading | Remember | 3 |
| 48 | Define function overloading | Remember | 3 |
| PART - B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Explain in detail Chomsky hierarchy of languages with neat diagram | Remember | 3 |
| 2 | Explain Type 2 and Type 3 grammars with example | Remember | 3 |
| 3 | Explain Type 0 and Type 1 grammars with example | Remember | 3 |
| 4 | Explain in detail type checking | Remember | 3 |
| 5 | Differentiate static and dynamic type checking | Remember | 3 |
| 6 | Explain in detail type conversion with suitable examples | Remember | 3 |
| 7 | Explain in detail equivalence of type expressions | Remember |  |
| 8 | Write short note on function overloading | Remember | 3 |
| 9 | Write short note on operator overloading | Remember | 3 |
| 10 | Differentiate structural, name equivalence of type expressions | Remember | 3 |
| 11 | Write a note on the specification of a simple type checker. | Knowledge | 3 |
| 12 | Describe the method of generating syntax directed definition for control Statements? | Understand | 3 |
| 13 | Define a type expression? Explain the equivalence of type Expressions with an appropriate example. | Understand | 3 |
| 14 | Explain the importance of type checking | Understand | 3 |
| 15 | Explain the importance of function and operator overloading | Understand | 3 |
| 16 | Explain the importance of type conversion | Knowledge | 3 |
| 17 | Distinguish between static and dynamic storage allocation? | Understand | 3 |
| 18 | Demonstrate semantic actions in semantic analysis | Understand | 3 |
| 19 | Explain translations on parse tree semantic analysis | Understand | 3 |
| 20 | Explain type checking in semantic analysis | Understand | 3 |

| S. No. | Questions | $\begin{aligned} & \hline \text { Bloom's } \\ & \text { Taxonomy } \\ & \text { Level } \end{aligned}$ | Course Outcome |
| :---: | :---: | :---: | :---: |
| PART - C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Suppose that the type of each identifier is a sub range of integers, for expressions with operators,,$+-{ }^{*}$, div and mod, as in Pascal. Write type-checking rules that assign to each sub expression the sub range its value must lie in. | Understand | 3 |
| 2 | Define type expression? Write type expression for the following type <br> i. Functions whose domains are functions from integers to pointers to integers and whose ranges are records consisting of an integer and a character. | Understand | 3 |
| 3 | Write an S-attributed grammar to connect the following with prefix rotator. $\begin{aligned} & \mathrm{L} \rightarrow \mathrm{E} \\ & \mathrm{E} \rightarrow \mathrm{E}+\mathrm{T}\|\mathrm{E}-\mathrm{T}\| \mathrm{T} \\ & \mathrm{~T} \rightarrow \mathrm{~T} \cdot \mathrm{~F}\|\mathrm{~T} / \mathrm{F}\| \mathrm{F} \\ & \mathrm{~F} \rightarrow \mathrm{P} \uparrow \mathrm{~F} \mid \mathrm{P} \\ & \mathrm{P} \rightarrow(\mathrm{E}) \\ & \mathrm{P} \rightarrow \mathrm{ID} \end{aligned}$ | Knowledge | 3 |
| 4 | Construct triples of an expression: a *-( $\mathrm{b}+\mathrm{c}$ ). | Knowledge | 3 |
| 5 | Explain SDD for Boolean expression with and without back patching? | Remember | 3 |
| 6 | Explain why are quadruples preferred over triples in an optimizing compiler? | Remember | 3 |
| 7 | Explain the following: <br> i) Static and Dynamic Checking of types <br> ii) Over loading of Operators \& Functions | Understand | 3 |
| UNIT - IV |  |  |  |
| PART - A (SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Define the principle sources of optimization | Understand | 4 |
| 2 | List different local optimization techniques | Understand | 4 |
| 3 | List different Loop optimization techniques | Understand | 4 |
| 4 | Define local optimization? | Understand | 4 |
| 5 | Define constant folding? | Understand | 4 |
| 6 | List the advantages of the organization of code optimizer? | Understand | 4 |
| 7 | Define Common Sub expressions? | Understand | 4 |
| 8 | Explain Dead Code? | Understand | 4 |
| 9 | Explain the techniques used for loop optimization and Reduction in strength? | Understand | 4 |
| 10 | Define loop unrolling | Understand | 4 |
| 11 | List the different data flow properties | Understand | 4 |
| 12 | Explain inner loops, natural loops | Understand | 4 |
| 13 | List different parameter passing techniques | Understand | 4 |
| 14 | Define activation record | Understand | 4 |

| S. No. | Questions | Bloom's Taxonomy Level | Course Outcome |
| :---: | :---: | :---: | :---: |
| 15 | Define busy expression | Understand | 4 |
| 16 | Define basic block and flow graph | Understand | 4 |
| 17 | List different storage allocation strategies | Understand | 4 |
| 18 | Explain about live variable analysis | Understand | 4 |
| 19 | Explain static storage allocation | Understand | 4 |
| 20 | Explain dynamic storage allocation | Understand | 4 |
| PART - B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Explain the principle sources of code optimization in detail | Understand | 4 |
| 2 | Explain peephole optimization? | Understand | 4 |
| 3 | Discuss about the following <br> i. Copy propagation <br> ii. Dead code elimination <br> iii. Code motion | Understand | 4 |
| 4 | Explain in the DAG representation of the basic block with example. | Understand | 4 |
| 5 | Explain Local optimization and loop optimization in detail | Understand | 4 |
| 6 | Write about Data Flow Analysis of structural programs | Understand | 4 |
| 7 | Explain various Global optimization techniques in detail | Understand | 4 |
| 8 | Explain organizing the non local data |  | 4 |
| 9 | Discuss algebraic simplification and reduction in strength | Understand | 4 |
| 10 | Explain dynamic storage allocation | Understand | 4 |
| 11 | Explain parameter passing in detail | Understand | 4 |
| 12 | Explain static storage allocation | Apply | 4 |
| 13 | Explain the different storage allocation strategies | Understand | 4 |
| 14 | (a) Write the procedure to detect induction variable with example? <br> (b) With example Explain dead code elimination? | Understand | 4 |
| 15 | (a) Explain how loop invariant computation can be eliminated? <br> (b) Explain how "Redundant sub-expression eliminates" can be done in a given program? | Understand | 4 |
| 16 | Explain reachable code in code optimization | Understand | 4 |
| 17 | Explain characteristics of peep hole optimization | Understand | 4 |
| 18 | Explain depth first search in data flow analysis | Understand | 4 |
| 19 | Differentiate between stack and heap storage allocation | Understand | 4 |
| 20 | Explain handling the local data | Understand | 4 |
| PART - C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Explain how loop invariant computation can be eliminated? | Knowledge | 4 |
| 2 | Describe the procedure to compute in and out values using data flow equations for reaching definition in structured programs? | Knowledge | 4 |

| S. No. | Questions | $\begin{aligned} & \hline \text { Bloom's } \\ & \text { Taxonomy } \\ & \text { Level } \end{aligned}$ | Course Outcome |
| :---: | :---: | :---: | :---: |
| 3 | ```Consider the following part of code. int main() \{ int \(\mathrm{n}, \mathrm{k}=0\); scanf("\%d",\&n); for \((\mathrm{i}=2 ; \mathrm{i}<\mathrm{n} ; \mathrm{i}++\) ) \{ if((n\%I)==0)break; \} \(\mathrm{k}=1\); if(i==n) printf("number is prime"); else printf("number is not printed"); \} Identify the basic blocks in the given program \& Draw the domination tree for the program``` | Understand | 4 |
| 4 | $\begin{aligned} & \text { Construct the DAG for the following basic block. } \\ & \text { D:=B*C } \\ & \text { E: }=\mathrm{A}+\mathrm{B} \\ & \mathrm{~B}:=\mathrm{B}+\mathrm{C} \\ & \text { A: }:=\mathrm{E}-\mathrm{D} \end{aligned}$ | Knowledge | 4 |
| 5 | ```Generate target code for the given program segments: main() { int i=4,j; j=i+5; l``` | Knowledge | 4 |
| 6 | Consider the following program which counts the prime from 2 to n using the sieve method on a suitable large array, begin read $n$ <br> for $\mathrm{i}:=2$ to n do <br> a[i]:=true <br> count $=0$; <br> for $\mathrm{i}:=2$ to $\mathrm{n} * * .5$ do <br> if a[i]then <br> begin <br> count:=2*I to $\mathrm{n} \mathrm{j}=\mathrm{j}+1$ do <br> $a[j]:=$ false end <br> i. print count end <br> ii. Propagate out copy statements wherever possible. <br> iii. Is loop jamming possible? If so, do it. <br> iv. Eliminate the induction variables wherever possible | Knowledge | 4 |
| 7 | Write an algorithm to eliminate induction variable? | Knowledge | 4 |
| 8 | Explain how the following expression can be converting in to DAG. $a+b *(a+b)+c+d$ | Knowledge | 4 |

| S. No. | Questions | $\begin{gathered} \hline \text { Bloom's } \\ \text { Taxonomy } \\ \text { Level } \\ \hline \end{gathered}$ | Course Outcome |
| :---: | :---: | :---: | :---: |
| 9 | State loop invariant computations? Explain how they affect the efficiency of a program? | Understand | 4 |
| 10 | Explain how "Redundant sub-expression Eliminates" can be done at global level in a given program? | Understand | 4 |
| 11 | Explain role of DAG in optimization with example? | Understand | 4 |
| 12 | Explain the use of Symbol table in compilation process? List out various attributes stored in the symbol table? | Understand | 4 |
| 13 | Explain the data structure used for implementing Symbol Table? | Understand | 4 |
| 14 | List the advantages and disadvantages of Static storage allocation strategies? | Understand | 4 |
| 15 | Explain about reusing the storage space for names? | Remember | 4 |
| 16 | Define self-organizing lists? How can this be used to organize a symbol table? Explain with an example? | Knowledge | 4 |
| 17 | Discuss and analyze about all allocation strategies in runtime storage environment? | Understand | 4 |
| 18 | Define activation records? Explain how it is related with run-time storage organization? | Remember | 4 |
| 19 | Only one occurrence of each object is allowable at a given moment during program execution. Justify your answer with respect to static allocation? | Knowledge | 4 |
| UNIT - V |  |  |  |
| PART - A (SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Define about machine dependent code generation | Remember | 5 |
| 2 | Explain the role of code generator in a compiler | Understand | 5 |
| 3 | List the issues in the design of code generator | Understand | 5 |
| 4 | List different object code forms | Understand | 5 |
| 5 | Explain the instructions and address modes of the target machine | Understand | 5 |
| 6 | Define absolute machine code | Understand | 5 |
| 7 | Define relocatable machine code | Understand | 5 |
| 8 | Define assembly language code | Understand | 5 |
| 9 | List different machine dependent optimization techniques | Remember | 5 |
| 10 | Define address descriptor with example | Remember | 5 |
| 11 | Define code descriptor with example | Remember | 5 |
| 12 | Explain how do you calculate the cost of an instruction | Understand | 5 |
| 13 | Generate the code for x : $=\mathrm{x}+\mathrm{y}-\mathrm{z}$ for target machine | Understand | 5 |
| 14 | Generate the code for $\mathrm{x}:=\mathrm{x}+1$ for target machine | Understand | 5 |
| 15 | Explain the input taken by code generation algorithm | Understand | 5 |
| 16 | Define DAG with example | Understand | 5 |
| 17 | Mention the applications of DAG | Knowledge | 5 |
| 18 | Define register allocation and assignment | Understand | 5 |

| S. No. | Questions | Bloom's Taxonomy Level | Course Outcome |
| :---: | :---: | :---: | :---: |
| 19 | List different register allocation techniques | Understand | 5 |
| 20 | Demonstrate global register allocation with example | Understand | 5 |
| PART - B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Explain the concept of object code forms | Understand | 5 |
| 2 | Explain different issues in design of code generator | Understand | 5 |
| 3 | Explain Machine dependent code optimization in detail with an Example | Understand | 5 |
| 4 | Write a short note on code generating algorithms | Understand | 5 |
| 5 | Explain in detail register allocation and assignment | Understand | 5 |
| 6 | Write about target code forms and explain how the instruction forms effect the computation time | Understand | 5 |
| 7 | Explain in detail about DAG for register allocation with example | Knowledge | 5 |
| 8 | ```Generate optimal machine code for the following C program. main() \{ int i, a[10]; while ( \(\mathrm{i}<=10\) ) \(\mathrm{a}[\mathrm{i}]=0\); \}``` | Knowledge | 5 |
| 9 | Show the code sequence generated by the simple code generation <br> Algorithm $\begin{aligned} & \mathrm{u}:=\mathrm{a}-\mathrm{c} \\ & \mathrm{v}:=\mathrm{t}+\mathrm{u} \end{aligned}$ $\mathrm{d}:=\mathrm{v}+\mathrm{u} / / \mathrm{d}$ | Knowledge | 5 |
| 10 | Identify the register descriptor target code for the source language statement $"(a-b)+(a-c)+(a-c) ; "$ <br> The 3AC for this can be written as $\mathrm{t}:=\mathrm{a}-\mathrm{b}$ |  | 5 |
| 11 | Demonstrate register allocation by graph coloring | Understand | 5 |
| 12 | Explain the steps involved in Dag construction | Understand | 5 |
| 13 | Demonstrate code generation algorithm in detail | Understand | 5 |
| 14 | Generate optimal machine code for the $\mathrm{X}:=(\mathrm{A}-\mathrm{B})+(\mathrm{A}-$ C) + (A-C) | Understand | 5 |
| 15 | Explain code generation from DAG using rearranging order algorithm | Understand | 5 |
| PART - C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Explain how the instruction forms effect the computation time? | Knowledge | 5 |

| S. No. | Questions | Bloom's <br> Taxonomy <br> Level <br> Knowe | Course Outcome |
| :---: | :---: | :---: | :---: |
| 2 | Explain how the nature of the object code is highly dependent on the machine and the operating system? | Knowledge | 5 |
| 3 | Explain why Next-use information is required for generating object code? | Knowledge | 5 |
| 4 | Efficient code generation requires the Remember of internal architecture of the target machine. Justify your answer with an Example? | Understand | 5 |
| 5 | ```Generate optimal machine code for the following wing c program. main() { int i,a[10]; while(i<=10) a[i]=0; }``` | Knowledge | 5 |
| 6 | Generate 3 address code for below code $X=(a+b)-/((c+d)-e)$ | Knowledge | 5 |
| 7 | Generate 3 address code for below code For ( $\mathrm{i}=1 ; \mathrm{i}<=10 ; \mathrm{i}++$ ) <br> $\operatorname{If}(\mathrm{a}<\mathrm{b})$ then $\mathrm{x}=\mathrm{y}+\mathrm{z}$ | Knowledge | 5 |
| 8 | ```Generate 3 address code for below code If \(a<b\) then While c >d do \(\mathrm{x}=\mathrm{x}+\mathrm{y}\) else do \(\mathrm{p}=\mathrm{p}+\mathrm{q}\) while e<=f``` | Knowledge | 5 |
| 9 | Generate 3 address code for below code $\begin{aligned} & X=1 \\ & X=y \\ & X=x++ \end{aligned}$ | Knowledge | 5 |
| 10 | ```Generate 3 address code for below code main( ) { int i; int a[10]; While(i<=0) a[i]=0; }``` | Knowledge | 5 |
