## INSTITUTE OF AERONAUTICAL ENGINEERING

## (Autonomous)

Dundigal, Hyderabad - 500043
CIVIL ENGINEERING

## QUESTION BANK

| Course Name | $:$ | Fluid Mechanics |
| :--- | :--- | :--- |
| Course Code | $:$ | A30101 |
| Class | $:$ | II-I- B. Tech |
| Branch | $:$ | CIVIL ENGINEERING |
| Year | $:$ | $2016-2017$ |
| Course Coordinator | $:$ | Mr. G. Anand Reddy, Assistant Professor, Civil Engineering |
| Course Faculty | $:$ | Mr. G. Anand Reddy, Assistant Professor, Civil Engineering |

## OBJECTIVES

The objectives of the course are to enable the student;
I. To understand the basic principles of fluid mechanics
II. To identify various types of flows
III. To understand boundary layer concepts and flow through pipes
IV. To evaluate the performance of hydraulic turbines
V. To understand the functioning and characteristic curves of pumps

1. Group - A (Short Answer Questions)

| S. No | Question | Blooms Taxonomy Level | Program Outcome |
| :---: | :---: | :---: | :---: |
| UNIT-IDIMENSIONS AND UNITS |  |  |  |
| 1 | Define density, weight density. | Understanding | 1 |
| 2 | Define specific volume | Understanding | 1 |
| 3 | Define Newton's laws of viscosity. | Understanding | 1 |
| 4 | Define surface tension. | Understanding | 1 |
| 5 | Define compressibility. | Understanding | 1 |
| 6 | Define viscosity. | Understanding | 1 |
| 7 | Define vapour pressure. | Understanding | 1 |
| 8 | Define atmospheric gauge and vacuum pressure. | Understanding \& remembering | 1 |
| 9 | Define compressible and incompressible fluid. | Understanding | 1 |
| 10 | Define and classify the manometers. | Understanding | 1 |
| 11 | Define specific gravity. | Understanding | 1 |
| 12 | Define Monometer | Understanding | 1 |
| 13 | Define Cohesion | Understanding | 1 |
| 14 | Define adhesion | Understanding | 1 |
| 15 | How are Fluids Classified? | Understanding | 2 |

| 16 | What are the units of Surface tension? | Understanding | 2 |
| :---: | :---: | :---: | :---: |
| 17 | Give the relation for pressure inside a water droplet | Understanding | 2 |
| 18 | How does the vapour pressure vary with the temperature? | Understanding | 2 |
| 19 | What is Newtonian Fluid? | Understanding | 2 |
| 20 | What is Non-Newtonian Fluid? | Understanding | 2 |
| UNIT-IIFLUID KINEMATICS |  |  |  |
| 1 | Define path line, stream line, stream tube and streak line. | Understanding | 9 |
| 2 | Define steady and unsteady flows. | Understanding | 9 |
| 3 | Define rotational and ir-rotational flows. | Understanding \& remembering | 9 |
| 4 | Define uniform and non uniform flows. | Understanding \& remembering | 9 |
| 5 | Define and state the applications of momentum equation. | Understanding \& remembering | 9 |
| 6 | Define laminar and turbulent flows. | Understanding \& remembering | 9 |
| 7 | Define compressible and incompressible flows. | Understanding \& remembering | 9 |
| 8 | Define the equation of continuity. | Understanding \& remembering | 9 |
| 9 | Define the terms velocity potential and stream functions. | Understanding \& remembering | 9 |
| 10 | Define the terms vertex, free vortex flows and forced vortex flows. | Understanding \& remembering | 9 |
| 11 | Mention one difference between streamline and path line | Understanding | 9 |
| 12 | What are streak lines? | Understanding | 9 |
| 13 | What is one dimensional flow with example? | Understanding | 9 |
| 14 | What are two dimensional flows with example? | Understanding | 9 |
| 15 | What are three dimensional flows with example? | Understanding | 9 |
| 16 | What is vorticity? | Understanding | 9 |
| 17 | What is a system? | Understanding | 9 |
| 18 | What is system boundary? | Understanding | 9 |
| 19 | State the Newton's Second law of motion. | Understanding\& remembering | 9 |
| 20 | State Reynolds's transport theorem | Understanding\& remembering | 9 |
| $\begin{gathered} \hline \text { UNIT-III } \\ \text { FLUID DYNAMICS } \end{gathered}$ |  |  |  |
| 1 | Name the different forces present in a fluid flow. | understanding | 10 |
| 2 | What is Euler's equation of motion. | understanding | 10 |
| 3 | What is venturimeter. | understanding | 10 |
| 4 | Define an orifice meter. | understanding | 10 |
| 5 | What is a pitot tube. | Understanding | 10 |
| 6 | Define moment of momentum equation. | understanding | 10 |
| 7 | Define continuity and Bernoulli's equation. | Remembering | 10 |
| 8 | What is a free jet of a liquid. | Understanding \& evaluate | 10 |

| 9 | What are the different forms of energy in a flowing fliud. | Understanding \& evaluate | 2 |
| :---: | :---: | :---: | :---: |
| 10 | Explain different types of pitot tubes. | Understanding \& Evaluate | 2 |
| 11 | Give Energy Equation of an ideal Flow along a Streamline | Understanding \& Evaluate | 2 |
| 12 | Give the mechanical Energy equation | Understanding \& Evaluate | 2 |
| 13 | Give the Bernoulli's equation with head loss | Understanding \& Evaluate | 2 |
| 14 | Give the Bernoulli's equation in Irrotational flow | Understanding \& Evaluate | 2 |
| 15 | Provide Navier's equation | Understanding \& Evaluate | 2 |
| 16 | Provide momentum equations | Understanding \& Evaluate | 2 |
| 17 | Give the classsificatio of orifices. | understanding | 2 |
| 18 | What are notches? | understanding | 2 |
| 19 | What are the types of notches? | understanding | 2 |
| 20 | What is a weir and what are its types? | understanding | 2 |
| UNIT-IVBOUNDARY LAYER THEORY |  |  |  |
| 1 | What do you understand by the terms boundary layer theory. | understanding | 1 |
| 2 | What is meant by boundary layer. | understanding | 1 |
| 3 | What do you mean by boundary layer separation. | remembering | 1 |
| 4 | Define displacement thickness. | remembering | 1 |
| 5 | What are the different methods of preventing the separating of boundary layers. | understanding | 1 |
| 6 | What is the effect of pressure gradient on boundary layer separation. | remembering | 1 |
| 7 | Define laminar boundary layer and turbulent boundary layer. | understanding | 1 |
| 8 | Define laminar sub layer and boundary layer thickness. | Understanding \& remembering | 1 |
| 9 | Define lift. | Understanding \& remembering | 1 |
| 10 | Define magnus effect. | Understanding | 1 |
| 11 | Write the prandtl contribution in boundary layer theory. | Understanding \& remembering | 1 |
| 12 | Draw Boundary layer and Free Stream for Flow Over a flat plate | Understanding \& remembering | 1 |
| 13 | Write two applications of boundary layer theory | Understanding \& remembering | 1 |
| 14 | State boundary layer co-ordinates | Understanding \& remembering | 1 |

| 15 | State Vonkarmen momentumintegral trasition equation | Understanding \& remembering | 1 |
| :---: | :---: | :---: | :---: |
| 16 | Explain Boundary layer Transition. | Understanding \& remembering | 1 |
| 17 | Explain Boundary layer Separation. | Understanding \& remembering | 1 |
| 18 | Explain Boundary layer control. | Understanding \& remembering | 1 |
| 19 | Define the term drag. | Understanding | 1 |
| 20 | Define the term momentum thickness. | Understanding | 1 |
| UNIT-VCLOSED CONDUIT FLOW |  |  |  |
| 1 | Define Reynold's experiment. | Understanding | 6 |
| 2 | What are the characteristics of laminar flows. | Remembering | 6 |
| 3 | What are the characteristics of turbulent flows. | Remembering \& Understanding | 6 |
| 4 | What is the flow between parallel lines. | Remembering \& Understanding | 6 |
| 5 | What are the laws of fluid friction. | Understanding | 6 |
| 6 | Define Darcy's equation. | Understanding | 6 |
| 7 | What are minor losses in pipes in series. | Understanding \& remembering | 6 |
| 8 | What are minor losses in pipes in parallel. | Understanding | 6 |
| 9 | What is energy line. | Remembering \& Understanding | 6 |
| 10 | What is hydraulic gradient line. | Understanding | 6 |
| 11 | Define flow through long tubes. | Remembering \& Understanding | 6 |
| 12 | Define flow through inclined tubes. | Remembering \& Understanding | 6 |
| 13 | What is hydraulic gradient line? | Remembering \& Understanding | 6 |
| 14 | Draw the figure for laminar flow. | Remembering \& Understanding | 6 |
| 15 | Draw the figure for turbulent flow. | Remembering \& Understanding | 6 |
| 16 | What is Moody's chart? | Remembering \& Understanding | 6 |
| 17 | Draw the figure for fully developed turbulent pipe flow | Remembering \& Understanding | 6 |
| 18 | State the characteristics of turbulent flow. | Remembering \& Understanding | 6 |
| 19 | Compare velocity profiles in laminar and turbulent flows. | Remembering \& Understanding | 6 |
| 20 | What are the characteristics of turbulent flow. | Remembering \& Understanding | 6 |

| S. No | Question | Blooms Taxonomy Level | Program Outcome |
| :---: | :---: | :---: | :---: |
| UNIT-IDIMENSIONS AND UNITS |  |  |  |
| 1 | State Newton's law viscosity and explain how viscosity varies with temperature for liquids and gases | Understanding \& remembering | 9 |
| 2 | Derive an expression for surface tension on a liquid jet. | Analyze | 9 |
| 3 | Derive an expression for surface tension on a liquid droplet. | Analyze | 9 |
| 4 | How do you measure the pressure by using manometers and mechanical gauges? | Analyze \& Apply | 9 |
| 5 | Prove that volumetric strain of a cylindrical rod which is subjected to an axial tensile load is equal to the strain in the length minus twice the strain if diameter. | Analyze \& Apply | 9 |
| 6 | Why does the viscosity of a gas increases with the increases in temperature while that of a liquid decreases with increase in temperature? | Analyze \& Apply | 9 |
| 7 | Calculate density, specific weight and weight of 1 liter of petrol of specific gravity 0.7 | Analyze \& Apply | 9 |
| 8 | State Newton's law viscosity and explain how viscosity varies with temperature for liquids and gases | Analyze \& Apply | 9 |
| 9 | Explain the phenomenon of capillarity .Obtain an expression for capillarity rise of a fluid. | Analyze \& Apply | 9 |
| 10 | Develop the expression for the relation between gauge pressure P inside a droplet of liquid and the surface tension. | Analyze \& Apply | 9 |
| 11 | State Newton's third law of motion and summarize how viscosity of liquids differ with temperature for particles in liquid state and gaseous state. | Analyze \& Apply | 9 |
| 12 | What is surface tension? Derive the expression for surface tension on a liquid jet. | Analyze \& Apply | 9 |
| 13 | Derive the expression for surface tension on a liquid Droplet. What is surface tension? | Analyze \& Apply | 9 |
| 14 | Write the procedure for determining/measuring pressures by monometers and mechanical gauges. | Analyze \& Apply | 9 |
| 15 | Obtain the relation with parameter like volumetric strain of cylindrical rod, its strain and diameter strain in case of a cylindrical rod subjected to axial tensile load. | Analyze \& Apply | 9 |
| 16 | Explain the phenomenon of temperature changes in viscosities of a liquid | Analyze \& Apply | 9 |
| 17 | Explain the phenomenon of temperature changes in viscosities of a gas | Analyze \& Apply | 9 |
| 18 | Derive the expression for capillary rise of a fluid. | Analyze \& Apply | 9 |
| 19 | Obtain the expression for surface tension and guage pressure for a liquid droplet. | Analyze \& Apply | 9 |

| S. No | Question | $\begin{array}{\|c\|} \hline \text { Blooms } \\ \text { Taxonomy Level } \\ \hline \end{array}$ | Program Outcome |
| :---: | :---: | :---: | :---: |
| UNIT-IIFLUID KINEMATICS |  |  |  |
|  |  |  |  |
| 1 | Sketch the flow pattern of an ideal fluid past a cylinder with circulation. | Understanding | 12 |
| 2 | Derive the condition for ir-rotational flow. Prove that for potential flow, both the stream function and velocity potential function must satisfy Laplace equation. | Understanding | 12 |
| 3 | Derive an expression for total pressure on a plane surface submerged in a liquid of specific weight with an inclination an angle $\theta$. | Understanding | 12 |
| 4 | Obtain an expression for continuity equation for a 3-D Flow. | Analyze \& Apply | 12 |
| 5 | Bring out the mathematical and physical distinction between rotational and irrotational flows. | Analyze \& Apply | 12 |
| 6 | Describe the use and limitations of flow nets | Analyze \& Apply | 12 |
| 7 | Obtain an expression for continuity equation for a 1-D Flow | Analyze \& Apply | 12 |
| 8 | Derive path line, stream line, and streak line. | Analyze \& Apply | 12 |
| 9 | State the properties of stream function and prove each one of them. | Analyze \& Apply | 12 |
| 10 | What is a stream tube and explain are its characteristics. | Analyze \& Apply | 12 |
| 11 | Draw the flow pattern of a non- ideal fluid past a cylinder with rotation. | Analyze \& Apply | 12 |
| 12 | What is ir-rotational Flow ? Show that in a laplace equation is satisfied in potential flows-stream function and velocity potential function. | Analyze \& Apply | 12 |
| 13 | With an inclination an angle $\theta$ and a plane surface submerged in a liquid of specific weight derive for total pressure. | Analyze \& Apply | 12 |
| 14 | What is continuity equation? Obtain the continuity equations for multi/ three dimensional flow. | Analyze \& Apply | 12 |
| 15 | What are the characteristics of Rotational and Ir-rotational Flows. Also distinguish with mathematical expressions. | Analyze \& Apply | 12 |
| 16 | What is a flow net and what are the advantages and dis-advantages of flow nets. | Analyze \& Apply | 12 |
| 17 | Explain continuity equation and derive the continuity equation for one dimensional flow. | Analyze \& Apply | 12 |
| 18 | Define Uniform and non- uniform, Compressible and non- compressible , ideal and non ideal fluids. | Analyze \& Apply | 12 |
| 19 | What is a streamline and a streak line. By justifying any one of the stream functions state its properties. | Analyze \& Apply | 12 |
| 20 | Define system, surroundings, system boundaries and their broad classification with explanation. Draw charts | Analyze \& Apply | 12 |

| S. No | Question | Blooms Taxonomy Level | Program Outcome |
| :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { UNIT-III } \\ \text { FLUID DYNAMICS } \end{gathered}$ |  |  |  |
|  |  |  |  |
| 1 | Derive an expression for displacement thickness due to formation of boundary layer | Understanding | 9 |
| 2 | How do you distinguish sharp crested weir from a broad crested weir? Derive the expression for discharge over a sharp crested rectangular weir? | Analyze \& Apply | 9 |
| 3 | For the Euler's equation of motion which forces are taken into consideration. | Analyze \& Apply | 9 |
| 4 | What is Euler's equation? How will you obtain Bernoulli's equation from it. | Analyze \& Apply | 9 |
| 5 | Discuss the relative merits and demerits of venturimeter with respect to orifice meter. | Analyze \& Apply | 9 |
| 6 | What is the difference between the pitot tube and pitot static tube. | Analyze \& Apply | 9 |
| 7 | What is the difference between the momentum equation and impulse momentum equation. | Analyze \& Apply | 9 |
| 8 | Derive Euler's equation of motion along a stream line for an ideal fluid and clearly the assumptions. | Analyze \& Apply | 9 |
| 9 | Why is divergence more gradual than convergence in a venturimeter. | Analyze \& Apply | 9 |
| 10 | Explain the principle of venturimeter with a neat sketch.derive the expression rate of flow of fluid through it. | Analyze \& Apply | 9 |
| 11 | What is a boundary layer and derive displacement thickness due to BL. | Analyze \& Apply | 9 |
| 12 | Derive the expression for discharge over a broad crested weir. Differentiate broad and sharp crested weir. | Analyze \& Apply | 9 |
| 13 | Explain the Euler's equation of motion considering the forces | Analyze \& Apply | 9 |
| 14 | Derive Bernoulli's equation from Euler's equation. What is the importance of Euler's equation state it. | Analyze \& Apply | 9 |
| 15 | State the advantages and disadvantages between venturimeter and orifice meter. | Analyze \& Apply | 9 |
| 16 | State the advantages OR disadvantages of pitot static tube over pitot tube. | Analyze \& Apply | 9 |
| 17 | Explain momentum equation and impulse momentum equation and its differences. | Analyze \& Apply | 9 |
| 18 | What are the assumptions of Euler's equation of motion along a stream line. Explain Newtonian and non- Newtonian fluids. | Analyze \& Apply | 9 |
| 19 | Expalin Divergence and convergence in a venturimeter briefly. | Analyze \& Apply | 9 |
| 20 | Explain the flow in triangular, rectangular and trapezoidal notches. | Analyze \& Apply | 9 |
| UNIT-IVBOUNDARY LAYER THEORY |  |  |  |
| 1 | Derive an expression for displacement thickness due to formation of boundary layer. | Analyze \& Apply | 10 |

| S. No | Question | Blooms <br> Taxonomy Level | Program <br> Outcome |
| :---: | :---: | :---: | :---: |
| 2 | Explain with sketches the three methods of boundary layer control. | Analyze \& Apply | 10 |
| 3 | Derive an expression for momentum thickness of boundary layer. | Analyze \& Apply | 10 |
| 4 | Explain magnus effect and theory of lift for airfoils. | Analyze \& Apply | 10 |
| 5 | Derive the expression for the energy and momentum correction factor | Analyze \& Apply | 10 |
| 6 | What are the boundary conditions that must be satisfied by a given velocity profile in laminar boundary layer flows. | Understanding | 10 |
| 7 | Obtain Von karman momentum integral equation. | Understanding | 10 |
| 8 | Explain boundary layer separation? Mention few methods to prevent or delay the separation of boundary layer? | Evaluate | 10 |
| 9 | Derive Prandtl's boundary layer equation. | Evaluate | 10 |
| 10 | Derive expressions for boundary layer thickness ,boundary shear stress and friction drag in a turbulent boundary layer | Analyze \& Apply | 10 |
| 11 | Explain the formation of boundary layer and displacement thickness. | Analyze \& Apply | 10 |
| 12 | What is boundary layer control and explain with diagrams. | Analyze \& Apply | 10 |
| 13 | What is momentum thickness? Explain its characteristics. | Analyze \& Apply | 10 |
| 14 | With the help of different theories explain magnus effect. | Analyze \& Apply | 10 |
| 15 | Explain Boundary layer in separation, Transition and control. | Analyze \& Apply | 10 |
| 16 | What are the boundary conditions that must be satisfied by a given velocity profile in Turbulent boundary layer flows. | Analyze \& Apply | 10 |
| 17 | Derive expressions for boundary layer thickness ,boundary shear stress and friction drag in a laminar boundary layer | Analyze \& Apply | 10 |
| 18 | Write about separation of boundary layer and how to prevent it. | Analyze \& Apply | 10 |
| 19 | Explain the flow around submerged objects. | Analyze \& Apply | 10 |
| 20 | Explain the characteristics of a boundary layer of a thin flat plate. | Analyze \& Apply | 10 |

UNIT-V
CLOSED CONDUIT FLOW

| 1 | Obtain the condition for maximum efficiency in transmission of power through <br> pipeline |  <br> Apply | 15 |
| :---: | :--- | :---: | :---: |
| 2 | Derive formulas for hydraulic gradient and total energy lines |  <br> Apply | 15 |
| 3 | Derive the equation for head loss in pipes due to friction Darcy-Weisbach <br> equation. |  <br> Apply | 15 |
| 4 | What are the minor losses in pipes? Give the appropriate formulae to calculate <br> the losses. |  <br> Apply | 15 |
| 5 | What do you understand by turbulent flow? What factor decides the type of <br> flow in pipes? | Apply | 15 |
| 6 | Derive an expression for the loss of head due to friction in pipes. | Analyze \& | 15 |

8|Page

| S. No | Question | Blooms <br> Taxonomy Level <br> Apply | Program <br> Outcome |
| :---: | :--- | :---: | :---: |
| 7 | Derive Darcy-Weisbach equation. |  <br> Apply | 15 |
| 8 | What is the velocity defect? Derive an expression for velocity defect in pipes? |  <br> Apply | 15 |
| 9 | Why are the pipes connected in parallel. |  <br> Apply | 15 |
| 10 | Explain what do you understand by hydraulic grade line and total energy line. <br> Discuss its practical significance in analysis of fluid flow problems. |  <br> Apply | 15 |
| 11 | Explain the phenomenon of transmission of power through pipeline and the <br> condition for maximum efficiency. |  <br> Apply | 15 |
| 12 | Obtain the expressions for Hydraulic gradient line and total energy lines. |  <br> Apply | 15 |
| 13 | Derive the equations for head loss in pipes using Darcy Weishbach's equation. |  <br> Apply | 15 |
| 14 | Explain minor and major losses in pipes. Obtain general formulae for loss <br> determination. |  <br> Apply | 15 |
| 15 | List out the important factors determining the type of flow in pipes. |  <br> Apply | 15 |
| 16 | Explain the phenomenon of velocity defect in pipes. |  <br> Apply | 15 |
| 17 | What is the importance, advantages and limitations of pipes connected in <br> parallel and series. |  <br> Apply | 15 |
| 18 | Elaborate the practical significance in analysis of fluid flow problems. <br> Distinguish Hydraulic gradient line and total energy line. |  <br> Apply | 15 |
| 19 | Discuss the variation of friction factor with Reynolds's number. |  <br> Apply | 15 |
| 20 | Explain the characteristics of laminar and turbulent flow and flow between <br> parallel plates with neat sketches. |  <br> Apply | 15 |
|  |  | 15 | 15 |

## 3. Group - III (Analytical Questions)

| S.No | QUESTIONS | Blooms <br> Taxonomy Level | Program Outcome |
| :---: | :---: | :---: | :---: |
| UNIT-I |  |  |  |
| DIMENSIONS AND UNITS |  |  |  |
| 1 | A plate of a certain oil weighs 40 KN . Calculate the specific weight, mass density and specific gravity of this oil. | Apply \& Evaluate | 1 |
| 2 | A plate 0.0254 mm distant from a fixed plate, moves at $61 \mathrm{~cm} / \mathrm{sec}$ and requires a force of $0.2 \mathrm{kgf} / \mathrm{m}^{2}$ to maintain this speed. Determine the dynamic viscosity of the fluid between the plates. | Apply \& Evaluate | 1 |
| 3 | A rectangular plate of size 25 cm by 50 cm and weighing 25 kgf slides down a $30^{0}$ inclined surface at a uniform velocity of $2 \mathrm{~m} / \mathrm{sec}$. If the uniform 2 mm gap between the plate and the inclined surface is filled with oil determine the viscosity of the oil. | Apply \& Evaluate | 1 |
| 4 | Calculate the capillary effect in mm in a glass tube 3 mm in diameter when immersed in (a) water (b) mercury. Both the liquids are at $20^{\circ} \mathrm{c}$ and the values | Apply \& Evaluate | 1 |

| S.No | QUESTIONS | Blooms <br> Taxonomy Level | Program <br> Outcome |
| :---: | :---: | :---: | :---: |
|  | of the surface tensions for water and mercury at $20^{\circ} \mathrm{c}$ in contact with air are respectively $0.0736 \mathrm{~N} / \mathrm{m}$ and $0.51 \mathrm{~N} / \mathrm{m}$. Contact angle for water $=0^{0}$ and for mercury $=130^{\circ}$. |  |  |
| 5 | What is the pressure with in a droplet of water 0.05 mm in diameter at $20^{\circ} \mathrm{c}$, if the pressure outside the droplet is standard atmospheric pressure of $1.03 \mathrm{~kg}(\mathrm{f}) / \mathrm{cm}^{2}$. Given $\sigma=0.0075 \mathrm{~kg}(\mathrm{f}) / \mathrm{m}$ for water at $20^{\circ} \mathrm{C}$. | Apply \& Evaluate | 1 |
| 6 | If the equation of a velocity profile over a plate is $V=2 y^{2 / 3}$ in which $V$ is the velocity in $\mathrm{m} / \mathrm{sec}$ at a distance of y meters above the plate. Determine the shear stress at $\mathrm{y}=0$ and $\mathrm{y}=0.075 \mathrm{~m}$ given $\mathrm{H}=0.835 \mathrm{~N} . \mathrm{S} / \mathrm{m}^{2}$ | Apply \& Evaluate | 1 |
| 7 | Convert a pressure head of 100 m of water to <br> a) Kerosene of specific gravity 0.81 <br> b) Carbon tetra chloride of specific gravity 1.6 | Apply \& evaluate | 1 |
| 8 | A trapezoidal channel 2 m wide at the bottom and 1 m deep has side slopes 1:1. Determine :the totoal pressure and the centre pressure on the vertical gate closing the channel when it is full of water. | Apply \& evaluate | 1 |
| 9 | A flat plate weighing 0.45 KN has a surface area of $0.1 \mathrm{~m}^{2}$. It slides down an inclined plane at $30^{\circ}$ to the horizontal at a constant speed of $3 \mathrm{~m} / \mathrm{s}$. if the inclined plane is lubricated with an oil of viscosity $0.1 \mathrm{Ns} / \mathrm{m}^{2}$. Find the thickness of the oil film. | Apply \& evaluate | 1 |
| 10 | A rectangular plane surface 3 m wide and 4 m deep lies in water in such a way that its plane making an angle of $30^{\circ}$ with the surface of water.detrmine the total pressure force and position of centre of pressure, when upper edge is 2 m below the free surface. | Apply \& evaluate | 1 |

## UNIT-II

## FLUID KINEMATICS

| 1 | An open circular cylinder of 15 cm diameter and 100 cm long contains water upto a height of 70 cm .find the speed at which the cylinder is to be rotated about its vertical axis so that the axial depth becomes zero. | Apply \& Evaluate | 9 |
| :---: | :---: | :---: | :---: |
| 2 | A vessel cylindrical in shape and closed at the bottom conrtains water upto a height of 80 cm .the diameter of the vessel is 20 cm and length of vessl is 120 cm . the vessel is rotated at a speed of $400 \mathrm{r} . \mathrm{p} . \mathrm{m}$ about its vertical axis.find the height of paraboloid formed. | Apply \& Evaluate | 9 |
| 3 | In a free cylindrical vortex flowsd, at a point in the fluid at a radius of 200 mm and a height of 100 mm . The velocity and pressures are $10 \mathrm{~m} / \mathrm{s}$ and $117.72 \mathrm{KN} / \mathrm{m}^{2}$.find the pressure at a radius of 400 mm and at a height of 200 mm . the fluid is air having density equal to $1.24 \mathrm{~kg} / \mathrm{m}^{3}$. | Apply \& Evaluate | 9 |
| 4 | A uniform flow with a velocity of $20 \mathrm{~m} / \mathrm{s}$ is flowing over a source of strength $10 \mathrm{~m}^{2} / \mathrm{s}$.the uniform flow and source flow are in the same plane | Apply \& Evaluate | 9 |
| 5 | A vessel cylindrical in shape and closed at the bottom and the top contains water at a height of 700 mm . The dia of the vessel is 200 mm and length of the vessel is 1.1 m . Find the speed of rotation of the vessel if the axial depth of the water is Zero. | Apply \& Evaluate | 9 |
| 6 | An open circular cylinder of 20 cm dia and 100 cm long contains water upto a height of 80 cm . It is rotated about its vertical axis. Find the speed of rotation when there is no water spills and axial depth is Zero. | Apply \& Evaluate | 9 |
| 7 | In a free cylindrical vortex flow of water at a point at a radius of 150 mm the velocity and pressure are $5 \mathrm{~m} / \mathrm{s}$ and $14.715 \mathrm{n} / \mathrm{cm}^{2}$. Find the pressure at a radius of 300 mm . | Apply \& Evaluate | 9 |

| S.No | QUESTIONS | $\begin{array}{\|c\|} \hline \text { Blooms } \\ \text { Taxonomy Level } \\ \hline \end{array}$ | Program Outcome |
| :---: | :---: | :---: | :---: |
| 8 | If the cylindrical vessel of dia 15 cm and length 100 cm contains water at a height of 80 cm is rotated at $950 \mathrm{r} . \mathrm{p} . \mathrm{m}$. About its vertical axis, find the Area uncovered at the base of the tank. |  <br> Evaluate | 9 |
| 9 | A rectangular pontoon of size 6 m length, 3 m width and 1.5 m height has a length of 0.95 m in sea water of specific weight $10055 \mathrm{n} / \mathrm{m}^{3}$. Determine its metacentric height assuming it to have a uniform composition. | Apply \& Evaluate | 9 |
| 10 | A triangular gate which has a base of 1.5 m and an altitude of 2 m lies in a vertical plane. The vertex of the gate is 1 m below the surface in a tank which contains oil of specific gravity 0.8 . Find the force exerted by the oil on the gate and the position of the centre of pressure | Apply \& Evaluate | 9 |
| $\begin{gathered} \text { UNIT-III } \\ \text { FLUID DYNAMICS } \end{gathered}$ |  |  |  |
| 1 | When 2500 liters of water flows per minute through a 0.3 m diameter pipe which later reduces to a 0.15 diameter pipe, calculate the velocities of flow in the two pipes. | Apply \& Evaluate | 10 |
| 2 | A pipe of dia 400 mm carries water at a velocity of $25 \mathrm{~m} / \mathrm{s}$. The pressures at a point are given as $29.43 \mathrm{n} / \mathrm{cm}^{2}$ and $22.563 \mathrm{n} / \mathrm{cm}^{2}$ while the datum head at A and B are 28 m and 30 m . Find the loss of head between A and B. | Apply \& Evaluate | 10 |
| 3 | A horizontal venturimeter with inlet and throat and diameters 30 cm and 15 cm is used to measure the flow of water. The reading of differential manometer connected to the inlet and the throat is 20 cm of mercury. Determine the rate of flow. Take $\mathrm{C}_{\mathrm{d}}=0.98$. | Apply \& Evaluate | 10 |
| 4 | Two velocity components are given in the following case, find the third component such that they satisfy the continuity equation. $\begin{aligned} & U=x^{3}+y^{2}+2 z^{2} \\ & V=-x^{2} y-y z-x y \end{aligned}$ | Apply \& Evaluate | 10 |
| 5 | The velocity components in a two-dimensional flow field for an incompressible fluid are expressed as $U=y^{3} / 3+2 x-x^{2} y \quad v=x y^{2}-2 y-x^{3} / 3$. <br> a) Show that these functions represent a possible case of an irrotational flow. <br> b) Obtain an expression for stream function $\Psi$ <br> c) Obtain an expression for velocity potential $\Phi$ | Apply \& Evaluate | 10 |
| 6 | For a three-dimensional flow field described by $\mathrm{V}=\left(\mathrm{y}^{2}+\mathrm{z}^{2}\right):+\left(\mathrm{x}^{2}+\mathrm{z}^{2}\right) \mathrm{j}+$ $\left(x^{2}+y^{2}\right) k$ find at $(1,2,3)$. <br> (i) the component of acceleration <br> (ii) the components of rotation | Apply \& Evaluate | 10 |
| 7 | In a straight uniform pipe, the discharge is reduced from $0.1 \mathrm{~m}^{3} / \mathrm{s}$ to zero in 10 seconds. If the cross-sectional area of the pipe is 200 sq cm , state the nature and value of acceleration. | Apply \& Evaluate | 10 |
| 8 | A nozzle is so shaped that the velocity of flow along the centerline changes linearly from $1-5 \mathrm{~m} / \mathrm{s}$ to $15 \mathrm{~m} / \mathrm{s}$ in a distance of 0.375 . Determine the magnitude of the convective acceleration at the beginning and end of this distance. | Apply \& Evaluate | 10 |
| 9 | In a 100 mm dia horizontal pipe a venturimeter of 0.5 contraction ratio has been fixed the head of water on the meter when there is no flow is 3 m . Find the rate of flow for which the throat pressure will be 2 m of water absolute. Take atmospheric pressure head $=10.3 \mathrm{~m}$ of water. The coefficient of meter is 0.97 . | Apply \& Evaluate | 10 |

| 10 | For a two-dimensional flow $\Phi=3 x y$ and $x=3 / 2\left(y^{2}-x^{2}\right)$. Determine the velocity components at the points $(1,3)$ and $(3,3)$. Also find the discharge passing between the streamlines passing through the points given above. | Apply \& Evaluate | 10 |
|  | UNIT-1V |  |  |
| BOUNDARY LAYER THEORY |  |  |  |
| 1 | A plate of 600 mm length and 400 mm wide is immersed in a fluid of specific gravity 0.9 and kinematic viscosity $\mathrm{v}=10^{-4} \mathrm{~m}^{2 / s}$. The fluid is moving with a velocity of $6 \mathrm{~m} / \mathrm{s}$. determine boundary layer thickness, shear stress at the end of the plate and drag force one side of the plate. | Apply \& Evaluate | 11 |
| 2 | Air flows at $10 \mathrm{~m} / \mathrm{s}$ past a smooth rectangular flat plate 0.3 m wide and 3 m long. Assuming that's the turbulence level in the on coming stream is low and that transition occurs at $\mathrm{R}_{\mathrm{e}}=5 \times 10^{5}$, Calculate ratio of total drag when the flow is parallel to the length of the plate to the value when the flow is parallel to the width. | Apply \& Evaluate | 11 |
| 3 | Oil with a free stream velocity of $2 \mathrm{~m} / \mathrm{s}$ flows over a thin plate 2 m wide and 2 m long. Calculate the boundary layer thickness and the shear stress at the trailing end point and determine the total surface resistance of the plate. Take specific gravity 0.86 and kinematic viscosity $10^{-5} \mathrm{~m}^{2} / \mathrm{s}$. | Apply \& Evaluate | 11 |
| 4 | A thin plate is moving in still atmospheric air at a velocity of $4 \mathrm{~m} / \mathrm{s}$. The length of plate is 0.5 m and width is 0.4 m , calculate the thickness of boundary layer at the end of the plate and the drag force on one side of the plate. Take density of air is $1.25 \mathrm{~kg} / \mathrm{m}^{3}$ and kinematic viscosity 0.15 stokes. | Apply \& Evaluate | 11 |
| 8 | A smooth flat plate of size 30 cm X 60 cm is placed in a stream of water of uniform velocity $60 \mathrm{~cm} / \mathrm{sec}$. Flow takes parallel to the 30 cm length of the plate. If the kinematic viscosity of water is 0.011 stoke, is the boundary layer formed on the plate laminar or turbulent? Determine the shear stress at the trailing edge, maximum boundary layer thickness, mean drag coefficient and the work done by the fluid on one side of the plate per unit time in Joules. | Apply \& Evaluate | 11 |
| 9 | A stream lined train is 350 m long and has an average cross-section with a perimeter of 110.2 m above the wheels. Assuming that the boundary layer is completely turbulent, compute the surface drag for a speed of 120 kmph and power required to overcome this drag. Dynamic viscosity of air $=0.000185$ poise and specific weight $=12 \mathrm{~N} / \mathrm{m}^{3}$. | Apply \& Evaluate | 11 |
| 10 | A smooth flat plate of size 6 m by 3 m is towed in a liquid of density $900 \mathrm{~kg} / \mathrm{m}^{3}$ and viscosity 0.12 poises at a uniform velocity of $2.5 \mathrm{~m} / \mathrm{s}$. The motion is parallel to the 6 m side of the plate. What is the length of the plate over which the boundary layer is laminar?> Calculate the surface drag on both sides of plate. | Apply \& Evaluate | 11 |
| Unit-VClosed Conduit Flow |  |  |  |
| 1 | Determine the distance from the pipe wall at which the local velocity is equal to the average velocity for turbulent flow in pipes. | Apply \& Evaluate | 9 |
| 2 | A smooth pipe of diameter 400 mm and length 800 mm carries water at the rate of $0.04 \mathrm{~m}^{3} / \mathrm{s}$. determine the head lost due to friction, wall shear stress, centre line velocity and thickness of laminar sublayer. Take kinematic viscosity of water as 0.018 stokes. | Apply \& Evaluate | 9 |
| 3 | Water is flowing through a rough pipe of diameter 600 mm at the rate 600 liters $/ \mathrm{sec}$. the wall roughness is 3 mm . find the power lost for 1 km length of pipe. | Apply \& Evaluate | 9 |
| 4 | A 0.3 m diameter pipe 2340m long is connected with a reservoir whose surface | Apply \& | 9 |

| :---: | :---: | :---: | :---: |
|  | is 72 m above the discharging end of the pipe. If for the last 1170 m , a second pipe of the same diameter be laid beside the first and connected to it. What would be the increase in the discharge? Take $\mathrm{f}=0.02$ | Evaluate |  |
| 5 | A compound piping system consists of 1800 m of $0.50 \mathrm{~m}, 1200 \mathrm{~m}$ of 0.40 m and 600 m of 0.30 m new cast iron pipes connected in series. Convert the system to <br> (a) an equivalent length of 0.40 m pipe and <br> (b) (b) equivalent size pipe 3600 m long. | Apply \& Evaluate | 9 |
| 6 | A pipe having a length of 6 km and diameter 0.70 m connects two reservoirs A and $B$, the difference between their water levels is 30 m . Half way along the pipe there is a branch through which water can be supplied to a third reservoir C. Taking $f=0.024$ determine the rate of flow of reservoir $B$ when <br> a) no water is discharged to reservoir C <br> b) the quantity of water discharged to reservoir C is $0.15 \mathrm{~m}^{3} / \mathrm{s}$ neglect minor losses. | Apply \& Evaluate | 9 |
| 7 | A pipeline 0.225 m in diameter and 1580 m long has a slope of 1 in 200 for the first 790 m and 1 in 100 for the next 790 m . The pressure at the upper end of the pipeline is 107.91 kpa and at the lower end is 53.955 kpa . Taking $\mathrm{f}=0.032$ determine the discharge through the pipe. | Apply \& Evaluate | 9 |
| 8 | The velocities of water through a pipe of diameter 10 cm are $4 \mathrm{~m} / \mathrm{s}$ and $3.5 \mathrm{~m} / \mathrm{s}$ at the centre of the pipe and 2 cm from the pipe centre. Determine the wall shearing stress in the pipe for turbulent flow. | Apply \& Evaluate | 9 |
| 9 | Determine the average height of the roughness for a rough pipe of diameter 10 cm when the velocity at a point 4 cm from wall is $40 \%$ more than the velocity at a point 1 cm from pipe wall. | Apply \& Evaluate | 9 |
| 10 | For turbulent flow in a pipe diameter 300 mm , find the discharge when the centre line velocity is $2 \mathrm{~m} / \mathrm{s}$ and the velocity at a point 100 mm from the centre as measured by pitot tube is $1.6 \mathrm{~m} / \mathrm{s}$. | Apply \& Evaluate | 9 |
