## INSTITUTE OF AERONAUTICAL ENGINEERING

## (Autonomous)

Dundigal, Hyderabad - 500043
ELECTRONICS AND COMMUNICATION ENGINEERING
TUTORIAL QUESTION BANK

| Course Name | : | ELECTROMAGNETIC THEORY AND TRANSMISSION LINES |  |
| :---: | :---: | :---: | :---: |
| Course Code | : | AEC007 |  |
| Class | : | B. Tech IV Semester |  |
| Branch | : | ECE |  |
| Academic Year | : | 2018-2019 |  |
| Course Coordinator |  | Dr.S.Pedda Krishna,Professor,ECE | \% |
| Course Faculty |  | Dr.P.Ashok Babu, Professor \& HOD. Mrs.A.Usha Rani,Assistant Professor Mr.Murali Krishna, Assistant Professor Dr.S.Pedda Krishna,Professor. |  |

## COURSE OBJECTIVES:

The course should enable the students to:

| S. NO | DESCRIPTION |
| :---: | :--- |
| I | Formulate and solve problems involving number systems and operations related to them and generate <br> different digital codes. . |
| II | Describe and analyze functions of logic gates and optimize the logic functions using K -map and Quine - <br> McClusky methods. |
| III | Demonstrate knowledge of combinational and sequential logic circuits elements like Adders, <br> Multipliers, flip-flops and use them in the design of latches, counters, sequence detectors, and <br> similar circuits |
| IV | Design a simple finite state machine from a specification and be able to implement this in gates and edge <br> triggered flip-flops |

COURSE LEARNING OUTCOMES:
Students, who complete the course, will have demonstrated the ability to do the following:

| CAEC007.01 | Understand the different types of 3D co-ordinate systems, scalars and vectors, physical <br> significance of divergence, curl and gradient. |
| :--- | :--- |
| CAEC007.02 | Understand the concepts of coulomb's law and gauss's law to different charge distributions like <br> point charge, line charge, surface charge and volume charge. Analyze its applications. |
| CAEC007.03 | Understand the applications of Laplace's and Poisson's equations to solve problems on <br> capacitance of different charge distributions. |
| CAEC007.04 | Understand the physical significance of Biot-Savart's law and Ampere's Circuit law for different <br> current distributions and analyze its applications. |
| CAEC007.05 | Evaluate the physical interpretation of Maxwell's equations and applications for various fields <br> like antennas and wave guides. |
| CAEC007.06 | Derive the boundary conditions between different media like dielectric to conductor, conductor to <br> free space. |
| CAEC007.07 | Analyze and apply the maxwell's equations to derive electromagnetic wave equations for <br> different media. |
| CAEC007.08 | Understand the behavior of electromagnetic waves incident on the interface between two different <br> media. |
| CAEC007.09 | Formulate and analyze problems in different media such as lossy, lossless with boundaries using <br> uniform plane waves. |

| CAEC007.10 | Understand the significance of transmission lines and its types, derive their primary constants and <br> secondary constants. |
| :--- | :--- |
| CAEC007.11 | Understand the concept of attenuation, loading, and analyze the loading technique to the <br> transmission lines. |
| CAEC007.12 | Understand the design of various transmission lines with respect to distortion, loss, impedance <br> matching, VSWR and reflection coefficient. |
| CAEC007.13 | Understand the impedance transformation for different lengths such as $\lambda / 4, \lambda / 2, \lambda / 8$ transmission <br> lines. |
| CAEC007.14 | Understand the design of ultra high frequency transmission lines for different applications by <br> using single and double stub matching techniques. |
| CAEC007.15 | Formulate and analyze the smith chart to estimate impedance, VSWR, reflection coefficient, OC <br> and SC lines. |
| CAEC007.16 | Apply the concept of electromagnetic fields to understand and analyze land mobile <br> communications. |
| CAEC007.17 | Acquire the knowledge and develop capability to succeed national and international level <br> competitive examinations. |

TUTORIAL QUESTION BANK

| S. No | QUESTION | Blooms Taxonomy Level | Course learning Outcome |
| :---: | :---: | :---: | :---: |
| UNIT-I |  |  |  |
| ELECTROSTATICS |  |  |  |
| PART-A (SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Define unit vector? | Understand | CAEC007.01 |
| 2 | State Coulomb's law? | Understand | CAEC007.02 |
| 3 | Write the expression for Coulombs law in vector form and explain the terms. | Understand | CAEC007.02 |
| 4 | Specify the physical significance of divergence and stokes. | Remember | CAEC007.01 |
| 5 | State Gauss's law? Write the Maxwell's first equation using Gauss's law | Understand | CAEC007.01 |
| 6 | Give the expression for the potential difference of two concentric conducting sphere of radius a and $b$ ? | Remember | CAEC007.01 |
| 7 | List the applications of Gauss law? | Understand | CAEC007.01 |
| 8 | Define electric flux and give the relation between electric field intensity and electric flux density? | Remember | CAEC007.01 |
| 9 | Give the relation between electric flux and flux density? | Understand | CAEC007.01 |
| 10 | State the Divergence theorem and give the expression? | Remember | CAEC007.01 |
| 11 | State the stoke's theorem and give the expression? | Understand | CAEC007.01 |
| 12 | Define electric potential? | Remember | CAEC007.01 |
| 13 | What is relation between E and V? Derive the relation between E and V. | Understand | CAEC007.03 |
| 14 | From Maxwell's equation, Derive Poisson's and Laplace equations | Remember | CAEC007.01 |
| 15 | Write boundary conditions for conducting media? | Remember | CAEC007.01 |
| 16 | What is "Relaxation time" and discuss its effect on conductors? | Remember | CAEC007.01 |
| PART-B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | State Gauss's law. Using divergence theorem and Gauss's law, relate the displacement density D to the volume charge density $\rho_{v}$. | Understand | CAEC007.01 |
| 2 | Explain the following terms: <br> i. Homogeneous and isotropic medium and <br> ii. Line, surface and volume charge distributions. | Understand | CAEC007.01 |
| 3 | Derive the boundary conditions for the tangential and normal components of Electrostatic fields at the boundary between two perfect dielectrics. | Remember | CAEC007.01 |
| 4 | Obtain the expression for the capacitance of a coaxial capacitor? | Understand | CAEC007.01 |
| 5 | Derive poisons and Laplace's equations and mention their applications? | Remember | CAEC007.01 |
| 6 | Explain the terms conduction current, convection current and relaxation time. | Understand | CAEC007.01 |
| 7 | An electric field enters from air into a dielectric slab at an oriented of $\theta 1$. Show that the electric field leaves the dielectric slab at the same orientation of $\theta 1$ to define boundary conditions. | Understand | CAEC007.01 |

| S. No | QUESTION | Blooms Taxonomy Level | Course learning Outcome |
| :---: | :---: | :---: | :---: |
| 8 | Using Gauss's law derive expressions for electric field intensity and electric flux density due to an infinite sheet of conductor of charge density $\rho_{\mathrm{s}} \mathrm{C} / \mathrm{cm}$ | Remember | CAEC007.01 |
| 9 | State coulomb's law and write the equation for F that exist between two unlike charges? | Understand | CAEC007.01 |
| 10 | A sphere of radius ' a ' is filled with a uniform charge density of $\rho_{\mathrm{v}} \mathrm{C} / \mathrm{m}^{2}$ .Determine the electric field inside and outside the sphere. | Understand | CAEC007.01 |
| 11 | A circular ring of radius $a$ carries a uniform charge $p_{L} \mathrm{C} / \mathrm{m}$ and is placed on the xy plane with axis the same as the z axis. Find the Electric Field at the point <br> $(0,0, \mathrm{~h})$ along itsaxis. What values of $h$ gives the maximum value of E ? | Understand | CAEC007.01 |
| PART-C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Point charges Q1 and Q2 are located at $(4,0,-3)$ and $(2,0,1)$, respectively. If $\mathrm{Q} 2=4 \mathrm{nC}$, find Q 1 such that. <br> i. The E at $(5,0,6)$ has no Z-component. <br> ii. The force on a test charge at $(5,0,6)$ has no X -component. | Remember | CAEC007.01 |
| 2 | Derive the boundary conditions for the tangential and normal components of Electrostatic fields at the boundary between two perfect dielectrics. | Understand | CAEC007.01 |
| 3 | A parallel plate capacitance has 500 mm side plates of square shape separated by 10 mm distance. A sulphur slab of 6 mm thickness with $\varepsilon_{\mathrm{r}}=4$ is kept on the lower plate find the capacitance of the setup. If a voltage of 100 volts is applied across the capacitor, calculate the voltages at both the regions of the capacitor between the plates. | Remember | CAEC007.01 |
| 4 | If point charge $3 \mu \mathrm{C}$ is located at the origin. Also there are two more charges $-4 \mu \mathrm{C}$ and $5 \mu \mathrm{C}$ are located at $(2,-1,3)$ and $(0,4,-2)$ respectively. Find potential at $(-1,5,2)$ Assume zero potential at infinity. | Remember | CAEC007.01 |
| 5 | A point charge of 5 nC is located at the origin. If $\mathrm{V}=2 \mathrm{~V}$ at $(0,6,-8)$, find <br> i) The potential at $\mathrm{A}(-3,2,6)$ <br> ii) The potential at B $(1,5,7)$ <br> iii) The potential difference $\mathrm{V}_{\mathrm{AB}}$ | Understand | CAEC007.01 |
| 6 | Three point charges $2 \mu \mathrm{c}, 4 \mu \mathrm{c}, 8 \mu \mathrm{c}$ are located at $(0,0,0),(0,0,1)$, and $(1,0,0)$ respectively. Find energy in the system. | Understand | CAEC007.01 |
| 7 | A parallel-plate capacitor has plates located at $\mathrm{z}=0$ and $\mathrm{z}=\mathrm{d}$. The region between platesis filled with a material containing volume charge of uniform density $\rho_{0} \mathrm{C} / \mathrm{m} 3$, and which has permittivity. Both plates are held at ground potential. <br> i) Determine the potential field between plates <br> ii) Determine the electric field intensity, E between plates. | Remember | CAEC007.01 |
| 8 | Concentric conducting spheres are located at $\mathrm{r}=5 \mathrm{~mm}$ and $\mathrm{r}=20 \mathrm{~mm}$. The region between the spheres is filled with a perfect dielectric. If the inner sphere is at 100 V and the outer sphere at 0 V : <br> i) Find the location of the 20 V equipotential surface, <br> ii) Find Er,max <br> iii) Find $\varepsilon r$ if the surface charge density on the inner sphere is $1.0 \mu \mathrm{C} / \mathrm{m}^{2}$ | Remember | CAEC007.01 |
| 9 | Three point charges $5 \mu \mathrm{c}, 8 \mu \mathrm{c}, 2 \mu \mathrm{c}$ are located at( $-2,4,6$ )( $0,0,1$ ) and ( $1,1,2$ ) respectively. Find energy in the system. | Understand | CAEC007.01 |
| 10 | A uniform line charge in $2.5 \mu \mathrm{c} / \mathrm{m} 2$ lies along the Z -axis and a concentric circular cylinder of radius 3 m has a surface charge of $-0.12 \mu \mathrm{c} / \mathrm{m} 2$. Both the distributions are infinite in extent with respect to Z-axis using Gauss's law find D in all regions, the region is free space. | Understand | CAEC007.01 |

| S. No | QUESTION | Blooms Taxonomy Level | Course learning Outcome |
| :---: | :---: | :---: | :---: |
| UNIT-II |  |  |  |
| MAGNETOSTATICS |  |  |  |
| PART-A(SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | State Biot- Savart's law? | Remember | CAEC007.06 |
| 2 | State Ampere's force law? | Understand | CAEC007.06 |
| 3 | State Ampere's circuital law? | Remember | CAEC007.05 |
| 4 | Is magneto static field is conservative? Explain. | Remember | CAEC007.02 |
| 5 | Write the Maxwell's equations for magneto static fields | Understand | CAEC007.06 |
| 6 | Define magnetic vector potential and magnetic scalar potential? | Remember | CAEC007.04 |
| 7 | Write the expression for Lorentz force equation. | Understand | CAEC007.04 |
| 8 | Define inductance? What's the energy stored in an inductor? | Understand | CAEC007.06 |
| 9 | Write Maxwell's equation for static electric field and steady magnetic field, both in point and integral form. | Understand | CAEC007.05 |
| 10 | Determine the total energy stored in a spherical region 1 cm in radius, centered at the origin in free space, in the uniform field of $H=-600 a_{y} \mathrm{~A} / \mathrm{m}$. | Understand | CAEC007.03 |
| 11 | State Gauss law for magnetic fields? | Remember | CAEC007.03 |
| 12 | Define displacement current density. | Remember | CAEC007.03 |
| 13 | Define magnetic flux density along with equation? | Understand | CAEC007.03 |
| 14 | Describe transformer and motional electromotive forces (emfs)in the context of Faraday's law. | Remember | CAEC007.03 |
| 15 | Derive the expression for magnetic force due to current conductor | Understand | CAEC007.03 |
| PART-B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Derive the boundary conditions between conductor and dielectric? | Remember | CAEC007.06 |
| 2 | Describe the inconsistency in Ampere's Law? How it is rectified by Maxwell? (or) What is Inconsistency of Ampere's Law and how it is modified | Remember | CAEC007.06 |
| 3 | Describe in detail the Faraday's law of induction. Write down the mathematical statement of this law? | Understand | CAEC007.05 |
| 4 | Derive Maxwell's equations in integral form and differential form for time varying fields. | Understand | CAEC007.06 |
| 5 | Define and explain the terms scalar and vector magnetic potential? How to determine these quantities for a magnetic field? | Remember | CAEC007.06 |
| 6 | Derive Lorentz force equation? | Understand | CAEC007.06 |
| 7 | Derive the equation of force on a differential current element? | Remember | CAEC007.02 |
| 8 | Derive the inductance of Solenoid? | Understand | CAEC007.04 |
| 9 | Obtain Maxwell's equations in phasor form? | Remember | CAEC007.04 |
| 10 | Derive the boundary conditions between conductor and free space? | Remember | CAEC007.06 |
| 11 | Find the field at the centre of a circular loop of radius ' $a$ ', carrying a current I along $\varphi$ in $\mathrm{z}=0$ plane. | Understand | CAEC007.04 |
| PART-C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | A steady current element $10^{-3} \mathrm{a}_{z} \mathrm{Am}$ is located at the origin in free space. Describe the the magnetic field B due to this element at the point $(1,0,0) \mathrm{m}$ ? | Understand | CAEC007.04 |
| 2 | A magnetic field intensity due to a current source is given | Remember | CAEC007.06 |

| S. No | QUESTION | $\qquad$ | Course learning Outcome |
| :---: | :---: | :---: | :---: |
|  | by $H=y \cos (\alpha \mathrm{x}) \hat{\mathrm{a}}_{\mathrm{x}}+\left(y+e^{x}\right) \hat{\mathrm{a}}_{z}$. Describe the current density over the yz plane? |  |  |
| 3 | A radial field $H=\frac{2.39 \times 10^{\circ}}{r}(\cos \phi) a_{r} \mathrm{~A} / \mathrm{m}$ exists in free space. Find the magnetic flux crossing the surface defined by $0<\phi<\pi / 4$ and $0<\mathrm{z}<$ 1 m . | Understand | CAEC007.04 |
| 4 | Calculate magnetic field intensity, if the vector magnetic potential within a cylindrical conductor of radius ' a ' is $A=\frac{\mu_{0} I r^{2}}{4 \pi a^{2}} a_{z}$ | Understand | CAEC007.04 |
| 5 | Calculate the force on al straight conductor of length 30 cm carrying a current of 5 A in $\mathrm{a}_{z}$ direction and the magnetic field $\mathrm{B}=3.5 \times 10^{-3}\left(\mathrm{a}_{\mathrm{x}}-\mathrm{a}_{\mathrm{y}}\right)$ Tesla where $\mathrm{a}_{\mathrm{x}}$ and $\mathrm{a}_{\mathrm{y}}$ are unit vectors. | Remember | CAEC007.06 |
| 6 | A Solenoid 3 cm in length carries a current of 400 mA . If the solenoid is to produce a magnetic flux density of $5 \mathrm{mWb} / \mathrm{m}^{2}$, how many turns of wire are needed? | Remember | CAEC007.06 |
| 7 | A Toroid of circular cross section whose center is at the origin and axis the same as the z-axis has 1000 turns with $\rho_{0}=10 \mathrm{~cm}, \mathrm{a}=1 \mathrm{~cm}$.If the toroid carries a 100 mA current. Find\|H| at $(3,-4,0)$ and $(6,9,0)$ | Remember | CAEC007.02 |
| 8 | Calculate H at ( $3 \mathrm{~m},-6 \mathrm{~m}, 2 \mathrm{~m}$ ) due to a current element of length 2 mm located at the origin in free space that carries current 16 mA in the positive y direction. | Understand | CAEC007.06 |
| 9 | An infinitely long conducting filament is placed along the x - axis and carries current 10 mA in the x - direction. Find H at $(-2,3,4)$. | Understand | CAEC007.02 |
| 10 | Plane $y=1$ carries current $K=50 a_{z} m A / m$. Find $H$ at <br> i) $(0,0,0)$ <br> ii) $(1,5,-3)$ | Understand | CAEC007.03 |
| UNIT-III |  |  |  |
| UNIFORM PLANE WAVES |  |  |  |
| PART-A(SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Write the expression for depth of penetration of a good conductor? | Remember | CAEC007.08 |
| 2 | Describe polarization of wave? | Remember | CAEC007.08 |
| 3 | Mention different types of polarization of a uniform plane wave? | Understand | CAEC007.08 |
| 4 | Recall the values of conductivity $(\sigma)$, permittivity $(\epsilon)$ and permeability $(\mu)$ for free space and lossless dielectric? | Understand | CAEC007.08 |
| 5 | Recall the values of conductivity ( $\sigma$ ), permittivity ( $\epsilon$ ) and permeability ( $\mu$ ) for perfect conductor and lossy dielectric? | Remember | CAEC007.08 |
| 6 | Define phase velocity and also write its expression? | Understand | CAEC007.08 |
| 7 | What is intrinsic impedance? Write the equation of intrinsic impedance in both free space and in any medium? | Remember | CAEC007.08 |
| 8 | Write the equation of attenuation constant in both free space and in any medium? | Remember | CAEC007.08 |
| 9 | Write the equation of phase constant impedance in both free space and in any medium? Write the expression for attenuation and phase constants of uniform plane wave | Understand | CAEC007.08 |
| 10 | Recall the equations of $\beta, \lambda$ and ' $v$ ' for the wave propagating through perfect dielectric? | Remember | CAEC007.08 |
| 11 | Determine the depth of penetration for copper at 1MHz. | Remember | CAEC007.08 |
| 12 | Describe the loss tangent? | Understand | CAEC007.08 |
| 13 | Write the wave equation for $\mathbf{D}$ and $\mathbf{B}$ in the uniform medium? | Understand | CAEC007.08 |

| S. No | QUESTION | $\begin{gathered} \text { Blooms } \\ \text { Taxonomy } \end{gathered}$ Level | Course learning Outcome |
| :---: | :---: | :---: | :---: |
| 14 | Write the wave equation for $\mathbf{E}$ and $\mathbf{H}$ in the uniform medium? | Remember | CAEC007.08 |
| 15 | Recall the equations of $\gamma, \alpha$, and ' $v$ ' for the wave propagating through perfect dielectric? | Understand | CAEC007.08 |
| 16 | Write the characteristics of uniform plane wave? | Remember | CAEC007.08 |
| 1 | Write briefly about lossy dielectric? | Understand | CAEC007.08 |
| 2 | Show the effect of attenuation constant $\alpha$, on amplitude of a wave propagation in good conductor pictorially? | Remember | CAEC007.08 |
| 3 | Describe the Brewster angle? | Understand | CAEC007.08 |
| 4 | Define Surface impedance? | Remember | CAEC007.08 |
| 5 | Write snell's law of reflection and refraction? | Remember | CAEC007.08 |
| 6 | Describe the total internal reflection? | Understand | CAEC007.08 |
| 7 | Describe the Critical angle? | Remember | CAEC007.08 |
| 8 | Write the expression for Brewster angle when a wave is parallely polarized? | Remember | CAEC007.08 |
| 9 | Define transmission coefficient? | Understand | CAEC007.08 |
| 10 | Distinguish between terms perpendicular polarization and parallel polarization for the case of reflection by a perfect conductor under oblique impedance? | Understand | CAEC007.08 |
| 11 | Determine the critical angle for the electromagnetic wave passing through glass to air if $\epsilon_{\mathrm{r}}$ for glass is 9 . | Understand | CAEC007.08 |
| 12 | Write the expression transmission coefficient of an EM wave when it is incident normally on a dielectric? | Remember | CAEC007.08 |
| 13 | Write the expression reflection coefficient of an EM wave when it is incident normally on a dielectric? | Remember | CAEC007.08 |
| 14 | Describe the difference between instantaneous poynting vector and complex poynting vector? | Understand | CAEC007.08 |
| 15 | Write point form of Poynting theorem? | Remember | CAEC007.08 |
| PART-B(LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Obtain wave equations for good conductors? | Remember | CAEC007.08 |
| 2 | Explain the characteristics of wave in perfect dielectric? | Understand | CAEC007.08 |
| 3 | Describe the meant by polarization of wave? When the wave is linearly polarized and circularly polarized? | Remember | CAEC007.08 |
| 4 | Derive expression for intrinsic impedance in a uniform plane wave in a lossy dielectric? | Remember | CAEC007.08 |
| 5 | Explain skin depth and derive expression for depth of penetration for good conductor? | Understand | CAEC007.08 |
| (e) |  |  |  |
| 1 | Derive the expression for reflection of a wave when incident on dielectric with oblique incidence with perpendicular polarization? | Understand | CAEC007.08 |
| 2 | Define Brewster angle and derive an expression for Brewster angle when a wave is parallely polarized? | Understand | CAEC007.08 |
| 3 | State and Prove Poynting theorem? | Understand | CAEC007.08 |
| 4 | Explain the power loss in a plane conductor? | Remember | CAEC007.08 |
| 5 | Derive the expression for power flow in a concentric cable? | Remember | CAEC007.08 |
| PART-C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | Find the skin depth and surface resistance of an aluminum at 100 MHz having conductivity $\sigma=5.8 \times 10^{7} \mho / \mathrm{m}, \mu_{\mathrm{r}}=100$. | Remember | CAEC007.08 |
| 2 | The electric field in the free space is given by, $E=50 \cos \left(10^{8} t+\beta x\right) \hat{\mathrm{a}}{ }_{y} \mathrm{~V} / \mathrm{m}$. <br> i) Find the direction of propagation <br> ii) Calculate $\beta$ and time it takes to travel a distance of $\lambda / 2$. | Understand | CAEC007.08 |
| 3 | A 10 GHz plane wave travelling in a free space has an amplitude of $\mathbf{E}$ as $\mathrm{E}_{x}=$ | Understand | CAEC007.08 |

| S. No | QUESTION | $\qquad$ | Course learning Outcome |
| :---: | :---: | :---: | :---: |
|  | $10 \mathrm{~V} / \mathrm{m}$. Find $\beta, \eta, v, \lambda$ ? |  |  |
| 4 | A plane wave travelling in free space has an average Poynting vector of 5 watts $/ \mathrm{m}^{2}$. Find magnitude of electric field intensity? | Remember | CAEC007.08 |
| 5 | A uniform plane wave of 200 MHz travelling in a free space impinges normally on a large block of material having $\epsilon_{\mathrm{r}}=4, \mu_{\mathrm{r}}=9, \sigma=0$. Calculate transmission and reflection coefficients at the interface. | Understand | CAEC007.08 |
| 1 | At a particular frequency, a medium has $\alpha=0.1 \mathrm{~Np} / \mathrm{m}, \eta=250 \angle 35.26^{\circ} \Omega$. Calculate the loss tangent, loss angle and wave length. | Remember | CAEC007.08 |
| 2 | In free space, the electric field component of TEM wave is $E=10 \sin \left(3 \times 10^{8} t+y\right) \hat{\mathrm{a}_{z}} \mathrm{~V} / \mathrm{m}$. Determine its polarization. <br> i) Find $\lambda, T$ <br> ii) Sketch the wave at $\mathrm{t}=0, \mathrm{~T} / 4$ and $\mathrm{T} / 2$. <br> iii) Calculate the corresponding H | Remember | CAEC007.08 |
| 3 | A uniform wave in air has $E=10 \cos \left(2 \pi \times 10^{6} t-\beta z\right) \hat{\mathrm{a}}$ y $\mathrm{V} / \mathrm{m}$. Calculate <br> i) $\beta$ and $\lambda$. <br> ii) Find H. <br> iii) Sketch the wave at $\mathrm{z}=0, \lambda / 4$ and $\lambda / 2$. | Understand | CAEC007.08 |
| 4 | A medium has the following constitutive parameters $\mu=\mu_{\mathrm{o}} . \varepsilon=9 \varepsilon_{0}, \sigma=5 \mathrm{x}$ $10^{-9} \mathrm{~J} / \mathrm{m}$. Calculate the wavelength of a wave at 1 GHz propagating through the medium. Should the medium be regarded as free space, lossy dielectric, lossless dielectric, or good conductor. | Understand | CAEC007.08 |
| 5 | In a certain medium $E=10 \cos \left(2 \pi \times 10^{7} t-\beta x\right)\left(\hat{\mathrm{a}_{y}}+\hat{\mathrm{a}_{z}}\right) \mathrm{V} / \mathrm{m}$.If $\mu=$ $50 \mu_{\mathrm{o},} \varepsilon=2 \varepsilon_{\mathrm{o}}, \sigma=0$. Find $\beta$ and $H$. | Remember | CAEC007.08 |
| UNIT-IV |  |  |  |
| TRANSMISSION LINES CHARACTERISTICS |  |  |  |
|  | PART-A (SHORT ANSWER QUESTIONS) |  |  |
| 1 | Define transmission line? Mention the various types of transmission lines? | Remember | CAEC007.11 |
| 2 | Draw the equivalent circuit of the transmission line? | Understand | CAEC007.11 |
| 3 | Write the differential form of transmission line equations? | Remember | CAEC007.11 |
| 4 | Mention the types of distortions on the transmission lines? | Understand | CAEC007.11 |
| 5 | Describe the distortion less transmission line? Is every loss less line is a distortion less line? Justify. | Understand | CAEC007.11 |
| 6 | Define intrinsic impedance or characteristic impedance of free space. | Remember | CAEC007.09 |
| 7 | Define wave length and phase velocity | Understand | CAEC007.09 |
| 8 | Define group velocity | Remember | CAEC007.09 |
| 9 | Describe the condition of loading in transmission lines? | Understand | CAEC007.09 |
| 10 | Describe the value of characteristic impedance of free space? | Remember | CAEC007.09 |
| 11 | Write secondary constants in terms of primary constants? | Remember | CAEC007.09 |
| 12 | Calculate the characteristic impedance of a quarter wave transformer if a 120 $\Omega$ load is to be matched to a $75 \Omega$ line. | Understand | CAEC007.09 |
| 13 | Write solution for V and I in exponential form? | Remember | CAEC007.09 |
| 14 | Write solution for V and I in the form of hyperbolic functions? | Understand | CAEC007.09 |
| 15 | Name and define the primary constants of transmission line? What are Primary and Secondary constants of transmission line | Understand | CAEC007.09 |
| PART-B (LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Starting from the equivalent circuit, derive the transmission line equations for V and I , in terms of the source parameters. | Understand | CAEC007.09 |
| 2 | From the fundamental voltage and current equations of transmission line, | Remember | CAEC007.11 |

| S. No | QUESTION | $\qquad$ | Course learning Outcome |
| :---: | :---: | :---: | :---: |
|  | derive Expression for input impedance $\mathrm{Z}_{\text {in }}$ of the line. Modify the expression for lossy \& lossless cases. |  |  |
| 3 | Describe the different distortions on a line and derive the conditions for distortion less transmission. | Understand | CAEC007.13 |
| 4 | Describe the loading? Explain the different types of loading in transmission lines? | Remember | CAEC007.09 |
| 5 | Describe the different distortions on a line and derive the conditions for minimum attenuation? | Understand | CAEC007.10 |
| 6 | Derive the characteristic impedance $\mathrm{Z}_{0}$ from the initial equation of transmission line? | Understand | CAEC007.09 |
| 7 | Derive the Propagation constant $\gamma$ from the general equations of voltage and current? | Remember | CAEC007.09 |
| 8 | Derive the expressions for $\alpha$ and $\beta$ in terms of primary constants? | Remember | CAEC007.13 |
| 9 | Define wave length, velocity of propagation and group velocity and write the respective equations? | Remember | CAEC007.11 |
| 10 | Derive the expression for loss less transmission line? | Understand | CAEC007.11 |
| PART-C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1 | At 8 MHz the characteristic impedance of transmission line is (40-j2) $\Omega$ and the propagation constant is $(0.01+\mathrm{j} 0.18)$ per meter. Find the primary constants. | Remember | CAEC007.09 |
| 2 | A loss less transmission line has $75 \Omega$ characteristic impedance. The line is terminated in a load impedance of $50-\mathrm{j} 100 \Omega$. The maximum voltage measured on the line is 100 V . Find the maximum current and minimum voltage on the line. | Remember | CAEC007.09 |
| 3 | A transmission line in which no distortion present has the following parameters. $\mathrm{Z}_{\mathrm{o}}=50 \Omega, \alpha=20 \mathrm{mN} / \mathrm{m}, \mathrm{V}=0.7 \mathrm{~V}_{\mathrm{o}}$. Determine primary constants and wave length at 0.1 GHz . | Understand | CAEC007.09 |
| 4 | Calculate the characteristic impedance, the attenuation constant and phase constant of a transmission line if the following measurements have been made on the line $\mathrm{Z}_{\mathrm{OC}}=550 \Omega$ and $\mathrm{Z}_{\mathrm{SC}}=500 \Omega$. | Understand | CAEC007.09 |
| 5 | A generator of $1 \mathrm{~V}, 1 \mathrm{KHz}$ supplies power to a 100 km long line terminated in $\mathrm{Z}_{\mathrm{o}}$ and having the following constants, $\mathrm{R}=10.4 \Omega / \mathrm{km}, \mathrm{L}=0.00367 \mathrm{H} / \mathrm{km}, \mathrm{G}$ $=0.8 \times 10^{-6} \mathrm{~J} / \mathrm{km}$ and $\mathrm{C}=0.00835 \times 10^{-6} \mathrm{~F} / \mathrm{km}$. Calculate $\mathrm{Z}_{\mathrm{o}}$, attenuation constant $\alpha$, phase constant $\beta$, wavelength $\lambda$ and velocity V . | Remember | CAEC007.12 |
| 6 | An open wire transmission line terminated in its characteristic impedance has the following primary constant at $1 \mathrm{KHz} . \mathrm{R}=6 \Omega / \mathrm{km}, \mathrm{L}=2 \mathrm{mH} / \mathrm{km}, \mathrm{G}=0.5$ u U, $\mathrm{C}=0.005 \mathrm{uF} / \mathrm{km}$. Calculate the phase velocity and attenuation in decibels suffered by a signal in a length of 100 kms . | Understand | CAEC007.12 |
| 7 | The primary constants of a cable are $\mathrm{R}=80 \Omega / \mathrm{km}, \mathrm{L}=2 \mathrm{mH} / \mathrm{km}$ and $\mathrm{G}=0.3 \mathrm{u}$ ర $/ \mathrm{km} . \mathrm{C}=0.01 \mathrm{uF} / \mathrm{km}$. Calculate the secondary constants at a frequency of 1 KHz . | Remember | CAEC007.13 |
| 8 | A loss less transmission line has $115 \Omega$ characteristic impedance. The line is terminated in a load impedance of $100-\mathrm{j} 250 \Omega$. The maximum voltage measured on the line is 120 V . Find the maximum current and minimum voltage on the line. | Remember | CAEC007.12 |
| UNIT-V |  |  |  |
| UHF TRANSMISSION LINES AND APPLICATIONS |  |  |  |
| PART-A(SHORT ANSWER QUESTIONS) |  |  |  |
| 1 | Describe the relationship between the short circuited impedance, open circuited impedance and characteristic impedance? | Understand | CAEC007.14 |
| 2 | Define reflection coefficient and VSWR, Describe the relationship between them | Understand | CAEC007.14 |
| 3 | Describe the matched transmission line .Why is matching of load impedance | Remember | CAEC007.14 |

| S. No | QUESTION | $\qquad$ | Course learning Outcome |
| :---: | :---: | :---: | :---: |
|  | is needed. |  |  |
| 4 | List the properties of smith chart? | Remember | CAEC007.14 |
| 5 | Describe the meant by stub matching? | Understand | CAEC007.14 |
| 6 | Describe the short circuited and open circuited lines? | Remember | CAEC007.14 |
| 7 | Differentiate between matched and unmatched transmission line | Understand | CAEC007.14 |
| 8 | Differentiate between single stub and double stub matching. | Understand | CAEC007.15 |
| 9 | Why it is desirable to achieve an impedance match in a transmission line? | Remember | CAEC007.15 |
| 10 | Write applications of quarter wave line? | Remember | CAEC007.15 |
| 11 | Describe the significance of circle diagram? | Understand | CAEC007.15 |
| 12 | A loss less line of $300 \Omega$ characteristic impedance is terminated in a pure resistance of $200 \Omega$. Find the value of standing wave ratio. | Understand | CAEC007.15 |
| 13 | Point out salient features of in a Smith chart. | Understand |  |
| 14 | Define a standing wave and how it is produced? | Remember | CAEC007.15 |
| 15 | List the applications of smith chart? | Understand | CAEC007.15 |
| PART-B(LONG ANSWER QUESTIONS) |  |  |  |
| 1 | Explain the principle of impedance matching with quarter wave transformer? | Remember | CAEC007.14 |
| 2 | Explain the significance and utility of $\lambda / 8, \lambda / 4$, and $\lambda / 2$ line? | Remember | CAEC007.14 |
| 3 | Explain the significance and design of single stub impedance matching. Discuss the factors on which length depends? | Understand | CAEC007.14 |
| 4 | Describe the construction of smith chart and give its applications? | Apply | CAEC007.14 |
| 5 | Explain with neat sketches how the input impedance of a lossless line varies with frequency? | Remember | CAEC007.14 |
| 6 | Derive the relation between reflection coefficient and standing wave ratio? | Understand | CAEC007.14 |
| 7 | Derive the expression for the input impedance of a uniform transmission line terminated with load $\mathrm{Z}_{\mathrm{L}}$. Hence discuss the properties of a quarter wave length and half wave length lines assuming the line to be loss less? | Understand | CAEC007.15 |
| 8 | Explain the significance of $\mathrm{V}_{\text {max }}$ and $\mathrm{V}_{\text {min }}$ positions along the transmission line, for a complex load $\mathrm{Z}_{\mathrm{R}}$. Hence obtain expression for impedances at these positions? | Remember | CAEC007.15 |
| 9 | Explain the method of determining the input impedance of line using smith chart for a lossless of length $l$ at any frequency f for a complex load of $\mathrm{Z}_{\mathrm{R}}$. | Understand | CAEC007.15 |
| 10 | Derive expression for the input impedance of a lossless line. Hence evaluate $\mathrm{Z}_{\mathrm{OC}}$ and $\mathrm{Z}_{\mathrm{SC}}$, also sketch their variation with line length? | Remember | CAEC007.14 |
| PART-C (PROBLEM SOLVING AND CRITICAL THINKING QUESTIONS) |  |  |  |
| 1. | Find the characteristic impedance of a line at 1600 Hz if the following measurements have made on the line at $1600 \mathrm{~Hz}, \mathrm{Zoc}=750 \Omega$ and $\mathrm{Zsc}=500$ $\Omega$. | Remember | CAEC007.14 |
| 2. | A transmission line of length $0.4 \lambda$ has a characteristic impedance of $100 \Omega$ and is terminated by a load impedance of $200+\mathrm{j} 180 \Omega$, by using smith chart find <br> i) Reflection coefficient <br> ii) VSWR <br> iii) Input impedance of the line | Understand | CAEC007.14 |
| 3. | Calculate the characteristic impedance of a quarter wave transformer if a 120 $\Omega$ load is to be matched to a $75 \Omega$ line? | Understand | CAEC007.14 |
| 4. | A transmission line having $50 \Omega$ impedance is terminated in a load of $(40+\mathrm{j} 30) \Omega$. Describe the the voltage standing wave ratio? | Understand | CAEC007.15 |
| 5. | A lossless line having an air dielectric has a characteristic impedance of 400 $\Omega$. The line is operating at 200 MHz and $\mathrm{Z}_{\mathrm{in}}=200-\mathrm{j} 200 \Omega$. Use the Smith chart , find: (a) SWR (b) $\mathrm{Z}_{\mathrm{L}}$ if the line is 1 m long; (c) The distance from the load to the nearest voltage maximum | Understand | CAEC007.15 |
| 6. | A low loss line with $\mathrm{Z}_{0}=70 \Omega$ is terminates in an impedance $\mathrm{Z}_{\mathrm{R}}=115-\mathrm{j} 80 \Omega$, | Understand | CAEC007.15 |

| S. No | QUESTION | Blooms Taxonomy Level | Course learning Outcome |
| :---: | :---: | :---: | :---: |
|  | the wavelength of transmission is 2.5 m , using the given smith chart, find the VSWR, $Z_{\text {max }}, Z_{\text {min }}$. |  |  |
| 7. | Find input impedance of a coaxial line having $\mathrm{Z}_{0}=95 \Omega$. The line is 20 m long short circuited at far end and operates at 10 M Hz . Verify answer by solving using smith chart. | Understand | CAEC007.15 |
| 8. | A transmission line of characteristic impedance $600 \Omega$ is terminated by a reactance of $+\mathrm{j} 150 \Omega$, find the input impedance of a section 25 cm long at a frequency of 300 MHz , smith chart may be used. | Understand | CAEC007.15 |
| 9. | A 100 km long transmission line is terminated by a resistance of $200 \Omega$, it has the following constants: $Z_{0}=600 \Omega, \alpha=0.01$ neper $/ \mathrm{km}, \beta=0.03$ radians $/ \mathrm{km}$. Find the reflection coefficient and the input impedance. | Understand | CAEC007.15 |
| 10. | Design a stub to match a transmission line which is connected to a load impedance of $\mathrm{Z}_{\mathrm{L}}=450-\mathrm{j} 600 \Omega$. The characteristic impedance of the line is 300 $\Omega$. The operating frequency is 20 M Hz . Design using smith chart also. | Remember | CAEC007.14 |
