TARE TO THE PARTY OF THE PARTY

INSTITUTE OF AERONAUTICAL ENGINEERING

(Autonomous) Dundigal, Hyderabad - 500 043

INFORMATION TECHNOLOGY

Tutorial Question Bank

Course Name	:	JAVA PROGRAMMING
Course Code	:	A40503
Class	:	II B. Tech II Semester
Branch	:	Information Technology
Year	:	2016 – 2017
Course Faculty	:	Mr. G Chandra Sekhar, Assistant Professor

OBJECTIVES

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited.

In line with this, Faculty of Institute of Aeronautical Engineering, Hyderabad has taken a lead in incorporating philosophy of outcome based education in the process of problem solving and career development. So, all students of the institute should understand the depth and approach of course to be taught through this question bank, which will enhance learner 's learning process.

S. No	Question	Blooms	Course
	***************************************	Taxonomy Level	Outcome
	UNIT - I		
PAR	Γ – A (Short Answer Questions)		
1	Define OOP?	Remembering	1,2,3
2	Distinguish between procedural language and OOPs?	Analyzing	1,2,3
3	Define Encapsulation?	Remembering	1,2,3
4	Define Inheritance?	Remembering	1,2,3
5	Define Polymorphism?	Remembering	1,2,3
6	List advantages of OOP?	Remembering	1,2,3
7	List disadvantages of OOP?	Remembering	1,2,3
8	Explain briefly out history of java?	Understanding	1,2,3
9	Explain briefly about different types of data types in java?	Understanding	1,2,3
10	What is constant? Explain different types of constants?	Remembering	1,2,3
11	What is Variable? Describe scope and life time of variables?	Remembering	1,2,3

S. No	Question	Blooms	Course
		Taxonomy Level	Outcome
12	List and describe different types of operators?	Remembering	1,2,3
13	Define type conversion?	Remembering	1,2,3
14	Define type casting?	Remembering	1,2,3
15	Define enumerated types?	Remembering	1,2,3
16	Define an array?	Remembering	1,2,3
17	Define this reference?	Remembering	1,2,3
18	Define constructor?	Remembering	1,2,3
19	Define recursion?	Remembering	1,2,3
20	Define garbage collection?	Remembering	1,2,3
PART	T – B (Long Answer Questions)		
1	Discuss the various characteristics of object oriented programming concepts?	Creating	1,2,3
2	Explain briefly about the features (buzzwords) of Java.	Understanding	1,2,3
3	Compare various differences between Java and C++.	Understanding	1,2,3
4	Why Java is a pure object oriented programming language	Remembering	1,2,3
5	Distinguish between procedure oriented and object oriented programming.	Analyzing	1,2,3
6	Explain the importance of this keyword in java with an example program	Understanding	1,2,3
7	What is method overloading? Explain with an example program	Remembering	1,2,3
8	Discuss about the method overloading and constructor overloading with an example.	Creating	1,2,3
9	What is Array? Explain different types of array and also discuss its advantages.	Remembering	1,2,3
10	Explain briefly about String class and discuss various methods in String class with an example.	Understanding	1,2,3
11	Explain about the console input and output with an example.	Understanding	1,2,3
12	What is a conditional statements? Discuss various types with examples.	Remembering	1,2,3
13	Explain the different types of constructors in java.	Understanding	1,2,3
14	What is the use of break and continue statements in java? Explain with an example.	Remembering	1,2,3
15	What is comment? Explain the different types of comments that are used in java.	Remembering	1,2,3
16	What is the use of the operators in java? Explain with an example.	Remembering	1,2,3
17	Define static field and method? Explain with an example.	Remembering	1,2,3
18	What are the different types of operators present in java? Explain	Remembering	1,2,3
19	What is type conversion and casting? Explain with an example.	Remembering	1,2,3
20	Explain each of the primitive datatypes present in java? Discuss in detail.	Understanding	1,2,3
21	Discuss about various techniques of parameter passing with an example program.	Remembering	4

PAR	T – C (Problem Solving and Critical Thinking Questions)		
1	Student john12 = new Student(1001, "John", 12); Student john13 = new Student(1002, "John", 13); System. out.println("comparing John, 12 and John, 13 with compareTo :" + john12.compareTo(john13)); then predict the output of the code?	Understand	1,2,3
2	What is the output of the program? class Lifetime { public static void main(String args[]) { int x; for (x=0; x<3; x++) { int y=-1; System.out.pirnltn(" y is :" + y); y=100; System.out.println(" y is now : "+y); }}	Understand	1,2,3
3	<pre>What will be the output of the program? public class If2 { static boolean b1, b2; public static void main(String [] args) { int x = 0; if (!b1) { if (!b2) { b1 =</pre>	Understand	1,2,3

4	Explain the following code legal in Java? is it example of method overloading or overriding? public String getDescription(Object obj){ return obj.toString; } public String getDescription(String obj){ return obj; } and public void getDescription(String obj) { return obj; }	Understand	1,2,3
5	Analyze the following program and find the output of the program? public class CounterAtomic { private AtomicLong counter = new AtomicLong(); public void increment() { counter.incrementAndGet(); } public long get() { return counter.get(); } }	Analyze	1,2,3
6	<pre>What will be the output of the program? public class Test { public int aMethod() { static int i = 0; i++; return i; } public static void main(String args[]) { Test test = new Test(); test.aMethod(); int j = test.aMethod(); System.out.println(j); } }</pre>	Remembering	1,2,3

7	What will be the output of the program?	Remembering	1,2,3
	<pre>public class Test { public static void main(String args[]) { int i = 1, j = 0; switch(i) { case 2: j += 6; case 4: j += 1; default: j += 2; case 0: j += 4; } System.out.println("j = " + j); } }</pre>		
8	Analyze the following program and find the output of the program? Class Test { public static void main(String args[]) { int x, y; y=20; for(x=0; x<10: x++) { System.out.println("this is x:" +x); System.out.println("this is y:" +y); y= y-2; } } }	Analyze	1,2,3
9	What will be the output of the program? class BitShift { public static void main(String [] args) { int x = 0x80000000; System.out.print(x + " and "); x = x >>> 31; System.out.println(x); } }	Remembering	1,2,3

10	Analyze and find out What will be the problem in the program?	Analyze	1,2,3
	class Equals		
	<pre>{ public static void main(String [] args)</pre>		
	{		
	int $x = 100$; double $y =$		
	100.1;		
	boolean $b = (x = y);$ System.out.println(b);		
	System.out.printin(b), }		
	}		
PART	UNIT - II ' – A (Short Answer Questions)		
1	Define Inheritance?	Understand	4
2	List types of inheritances in java?	Remembering	4
3	What are Member access rules in java?	Remembering	4
4	Explain the Uses of "Super" keyword	Understanding	4
5	Explain the Uses "final" keyword with inheritance	Understanding	4
6	What is Object class?	Understand	4
7	What is abstract class?	Remembering	4
8	Define polymorphism?	Remembering	4
9	Define dynamic binding?	Remembering	4
10	Define method overriding?	Remembering	4
11	Compare and Contrast differences between interfaces vs Abstract classes.	Understanding	4
12	Define interface?	Remembering	4
13	What is an inner class?	Understanding	4
14	Define static inner classes.	Remembering	4
15	What is package?	Remembering	4
16	Define various steps for creating and importing packages.	Understanding	4
17	What are abstract methods?	Remembering	4
18	What is CLASSPATH?	Remembering	4
19	List advantages of inheritance?	Remembering	4
20	How we implement an interface. Explain.	Remembering	4
	T – B (Long Answer Questions)		4
1	What is Inheritance? Discuss its uses and Hierarchical abstractions?	Remembering	4
2	List different types of inheritances in java? Explain each of them in detail with an example programs.	Remembering	4
3	Discuss about Object class and its methods.	Creating	4
4	Explain the Usage of "Super" keyword, with an example program.	Understanding	4
5	What is package? Explain different types of Packages.	Remembering	4
6	Compare various differences between interfaces and abstract class.	Understanding	4
7	What is dynamic binding? Explain with an example?	Remembering	4
8	Define method overriding? Write with an example?	Remembering	4
9	Explain the usage of abstract classes and methods? With an example programs.	Remembering	4

10	Discuss how interfaces are defined and implemented.	Remembering	4
11	Explain the uses of inner classes and local inner classes. With an example?	Understanding	4
12	Discuss in detail about creating and importing packages with an examples.	Creating	4
13	Discuss in detail how packages can be defined, creating and accessed.	Creating	4
14	How interfaces can be extended? Explain.	Understanding	4
15	What is interface? Write Differences between classes and interfaces?	Remembering	4
16	What is final keyword? Explain its importance in java with an example program.	Understand	4
17	What is inheritance? Explain the benefits of inheritance with an example	Remembering	4
18	What are various Member access rules explain with an example.	Remembering	4
19	Discuss the various levels of Access protection available for packages and their implications.	Creating	4
20	Compare and Contrast overloading and overriding methods.	Remembering	4
PAR	Γ – C (Problem Solving and Critical Thinking Questions)		
1	Analyze the program and give output	Analyzing	4
	public class Foo		
	{		
	Foo()		
	{		
	System.out.print("foo");		
	}		
	alaca Dar		
	class Bar		
	Bar()		
	Bai()		
	System.out.print("bar");		
	}		
	public void go()		
	System.out.print("hi");		
	} /* class Bar ends */		
	public static void main (String [] args)		
	Foo $f = new$		
	Foo();		
	f.makeBar();		
	}		
	void makeBar()		
	{		
	(new Bar() { }).go();		
	}/* class Foo ends */		

2	Explain the following code legal in Java?	Understanding	4
	<pre>class OuterClass { private int privInt = 10; public void createInnerClass() { InnerClass inClass = new InnerClass(); inClass.accessOuter(); } class InnerClass { public void accessOuter() { System.out.println("The outer class's privInt is " + privInt); } } public static void main(String[] args) { OuterClass outClass = new OuterClass(); OuterClass.InnerClass inner = outClass.new InnerClass(); inner.accessOuter(); }</pre>		
3	Analyze the following program and find the output of the program? class A { //Members and methods declarations. } class B extends A { //Members and methods from A are inherited. //Members and methods declarations of B. } class A { public A() { System.out.println("New A"); } } class B extends A { public B() { super(); System.out.println("New B"); } }	Analyze	4

```
Illustrate the output of the following program?
                                                                            Applying
interface MyInterface
 public void method1();
 public void method2();
class XYZ implements MyInterface
 public void method1()
   System.out.println("implementation of method1");
 public void method2()
   System.out.println("implementation of method2");
 public static void main(String arg[])
   MyInterface obj = new XYZ();
   obj. method1();
 }
What is the output of the program?
                                                                          Remembering
Class A
  final public int GetResult(int a, int b)
  { return 0; }
class B extends A
  public int GetResult(int a, int b)
  {return 1; }
public class Test
  public static void main(String args[])
    B b = new B();
    System.out.println("x = " + b.GetResult(0, 1));
```

```
What will be the output of the program?
                                                                           Remembering
class Super
  public int i = 0;
  public Super(String text)
     i = 1;
class Sub extends Super
  public Sub(String text)
     i = 2;
  public static void main(String args[])
     Sub sub = new Sub("Hello");
     System.out.println(sub.i);
What will be the output of the program?
                                                                          Remembering
interface Count
  short counter = 0;
  void countUp();
public class TestCount implements Count
  public static void main(String [] args)
     TestCount t = new
     TestCount(); t.countUp();
  public void countUp()
     for (int x = 6; x>counter; x--, ++counter)
       System.out.print(" " + counter);
```

8	Analyze and find out the output of the program?	Analyze	4
	public class Test		
	<pre>{ public int aMethod()</pre>		
	{ static int i =		
	0; i++;		
	return i; }		
	<pre>public static void main(String args[]) {</pre>		
	Test test = new Test();		
	test.aMethod(); int j =		
	test.aMethod();		
	System.out.println(j); }		
	}		
9	Develop a Java Program to create an abstract class named Shape that contains two integers and an empty method named printArea(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.	Applying	4
10	Analyze and find out the output of the program?	Analyze	4
	package mypack;		
	class Book		
	{ String bookname;		
	String author; Book(String b, String c)		
	{ this.bookname = b;		
	this.author = c ;		
	<pre>public void show()</pre>		
	{ System.out.println(bookname+" "+ author);		
	} }		
	class test		
	{		
	<pre>public static void main(String[] args) {</pre>		
	Book bk = new Book("java","Herbert"); bk.show();		
	} }		

2 Distinguish between exception and error? 3 What are the benefits of exception handling 4 Explain the classification of exceptions. 5 Define checked exceptions? 6 Define enchecked exceptions? 7 Define built in exceptions? 8 Explain the usage of try and catch 9 Explain the usage of throw, throws and finally. 10 Distinguish between throw and throws? 11 Distinguish between process and thread? 12 What are thread states? Explain. 13 What are the different ways to create a thread? 14 Define producer consumer problem? 15 Define inter-thread communication? 16 How threads are synchronized? 17 What are different thread priorities 18 How many ways can thread be Created? 19 Explain about the alive() and join() method 20 Explain about "thread class implements Runnable interface". 21 What are try, catch, and finally leywords in with an example 22 What are try, catch, and finally keywords in with an example 35 Explain the usage of throws keyword in exception subclass with an example rogram. 36 Define the usage of throws keyword in exception subclass with an example. 36 Explain the vasage of throws keyword in exceptions? 37 Explain the usage of throws keyword in exception subclass with an example. 38 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java program that uses the above user defined exception. 38 Explain the various ways of creation of thread with an example 39 Explain the process of creating an own exception subclass with an example. 40 Define the usage of throws keyword in exception subclass with an example. 50 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java program that uses the above user defined exception. 40 Define the usage of throws keyword in exception subclass with an example. 41 Define the usage of throws for creation of thread with an example. 42 Remembering 5.6 43 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java		UNIT - III		
Define Exception? Remembering 5.6	PAR	T – A (Short Answer Ouestions)		
What are the benefits of exception handling Remembering 5.6		,	Remembering	5,6
What are the benefits of exception handling Remembering 5.6	2	Distinguish between exception and error?	Analyzing	5,6
4 Explain the classification of exceptions. Understanding 5,6 5 Define checked exceptions? Remembering 5,6 6 Define built in exceptions? Remembering 5,6 7 Define built in exceptions? Remembering 5,6 8 Explain the usage of throw, throws and finally. Understanding 5,6 9 Explain the usage of throw, throws and finally. Understanding 5,6 10 Distinguish between throw and throws? Analyzing 5,6 11 Distinguish between process and thread? Analyzing 5,6 12 What are thread states? Explain. Remembering 5,6 13 What are the different ways to create a thread? Remembering 5,6 14 Define producer consumer problem? Remembering 5,6 15 Define inter-thread communication? Remembering 5,6 16 How threads are synchronized? Remembering 5,6 17 What are different thread priorities Remembering 5,6 18 How man			• •	5,6
5 Define unchecked exceptions? Remembering 5.6 6 Define unchecked exceptions? Remembering 5.6 7 Define built in exceptions? Remembering 5.6 8 Explain the usage of try and catch Understanding 5.6 9 Explain the usage of throw, throws and finally. Understanding 5.6 10 Distinguish between throw and throws? Analyzing 5.6 11 Distinguish between process and thread? Analyzing 5.6 12 What are thread states? Explain. Remembering 5.6 13 What are thread states? Explain. Remembering 5.6 14 Define producer consumer problem? Remembering 5.6 15 Define inter-thread communication? Remembering 5.6 16 How threads are synchronized? Remembering 5.6 17 What are different thread priorities Remembering 5.6 18 How many ways can thread be Created? Understanding 5.6 19 Explain about the alive() and join() method Understanding 5.6 20 Explain about "thread class implements Runnable interface". Understanding 5.6 21 Explain about "thread class implements Runnable interface". Understanding 5.6 22 Explain about the alive() and join() method Understanding 5.6 23 Explain the usage of throw keyword's in with an example Remembering 5.6 24 What are try, catch, and finally keywords in with an example Understanding 5.6 25 Explain the usage of throw keyword's Write with an example Understanding 5.6 26 Explain the usage of throw keyword's Write with an example Remembering 5.6 27 Explain the usage of throw keyword's in with an example Understanding 5.6 28 Explain the process of creating an own exception subclass with an example program. 29 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java program that uses the above user defined exception. 3 Explain the process of creating an own exception subclass with an example Understanding 5.6 3 Explain the process of creating an own exception subclass with an example. 4 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java program that uses the above user defined exception. 4 Define a except)	5,6
6 Define unchecked exceptions? Remembering 5.6 7 Define built in exceptions? Remembering 5.6 8 Explain the usage of try and catch Understanding 5.6 9 Explain the usage of throw, throws and finally. Understanding 5.6 10 Distinguish between throw and throws? Analyzing 5.6 11 Distinguish between process and thread? Analyzing 5.6 12 What are thread states? Explain. Remembering 5.6 13 What are the different ways to create a thread? Remembering 5.6 14 Define inter-thread communication? Remembering 5.6 15 Define inter-thread communication? Remembering 5.6 16 How threads are synchronized? Remembering 5.6 17 What are different thread priorities Remembering 5.6 18 How many ways can thread be Created? Understanding 5.6 19 Explain about the alive() and join() method Understanding 5.6 20 Ex	5	-	0	5,6
8 Explain the usage of try and catch 9 Explain the usage of throw, throws and finally. 10 Distinguish between throw and throws? 11 Distinguish between throw and throws? 12 What are thread states? Explain. 13 What are thread states? Explain. 14 Define producer consumer problem? 15 Define inter-thread communication? 16 How threads are synchronized? 17 What are different thread priorities 18 How many ways can thread be Created? 19 Explain about the alive() and join() method 20 Explain about the alive() and join() method 20 Explain about "thread class implements Runnable interface". 21 What is an exception? Explain how an exception can be handled in Java? And also list the benefits of Exception Handling. 22 What are try, catch, and finally keywords in with an example 33 Explain the usage of throw keyword? Write with an example 4 Define the usage of throw keyword? Write with an example 5 Define the usage of throw keyword? Write with an example 5 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java program that uses the above user defined exception. 4 Define a exception called "NotEqualException" that is thrown when a float value is not equal to 3.14. Write a java program that uses the above user defined exception. 6 Differentiate between Checked and Unchecked exceptions? 7 Explain the process of creating an own exception subclass with an example. 8 Develop a java program to implement built in exceptions? 9 Explain the various ways of creation of thread with an example. 10 What is multithreading? Explain. 11 What is a thread? Explain the states of a thread with an example. 12 Remembering 13 Distinguish between multi-tasking and multi-threading 14 Captalant in detail the process of creating thread with an example. 15 Explain in detail the process of creating thread with an example. 26 Define the usage of throw the states of a thread with an example. 27 Explain in detail the process of creating thread with an example. 38 Develop a java program to implement b	6	Define unchecked exceptions?		5,6
9 Explain the usage of throw, throws and finally. Understanding 5,6 10 Distinguish between throw and throws? Analyzing 5,6 11 Distinguish between process and thread? Analyzing 5,6 12 What are thread states? Explain. Remembering 5,6 13 What are the different ways to create a thread? Remembering 5,6 14 Define producer consumer problem? PART – A (Short Answer Questions)
      Define collections?
                                                                              Remembering
                                                                                                   7.8
 2
      Define Java collection Frame work.
                                                                                                   7,8
                                                                              Remembering
 3
      Define Array List with syntax
                                                                              Remembering
                                                                                                   7,8
                                                                                                   7.8
 4
     Define Vector with syntax.
                                                                              Remembering
 5
     Define hash table with syntax.
                                                                                                   7.8
                                                                              Remembering
 6
      Define stack with syntax.
                                                                                                   7,8
                                                                              Remembering
      Define enumeration with syntax.
                                                                                                   7,8
 7
                                                                              Remembering
                                                                                                   7,8
 8
      What is Iterator?
                                                                              Remembering
                                                                              Understandin
 9
      Explain the function of StringTokenizer.
                                                                                                   7,8
                                                                                                   7,8
10
     Define random class.
                                                                              Remembering
                                                                                                   7,8
11
      Define Scanner class.
                                                                              Remembering
                                                                                                   7,8
12
      Define Calendar class.
                                                                              Remembering
13
                                                                                                   7,8
     Define Properties class
                                                                              Remembering
14
      Define Stream?
                                                                              Remembering
                                                                                                   7,8
      Define byte stream?
                                                                                                   7,8
15
                                                                              Remembering
                                                                                                   7,8
16
     Define character stream?
                                                                              Remembering
                                                                                                   7,8
17
      Define text input/output file?
                                                                              Remembering
     Define JDBC?
                                                                                                   7.8
18
                                                                              Remembering
19
     List types of JDBC drivers.
                                                                                                   7,8
                                                                               Understand
      Define random access file?
                                                                               Understand
                                                                                                   7,8
PART – B (Long Answer Questions)
                                                                                                   7.8
      Explain the concept of Java collection frame. Write a brief overview on
                                                                              Understanding
2
      Explain the concept of generics and generic collections in java.
                                                                              Understanding
                                                                                                   7,8
                                                                                                   7,8
      Explain briefly about Vector class with an example.
                                                                              Understanding
```

4	What is hash table? Explain with an example?	Remembering	7,8
5	Demonstrate about stack class with an example.	Understanding	7,8
6	What is enumeration? Explain about with an example.	Remembering	7,8
7	Explain briefly about iterator with an example.	Understanding	7,8
8	Discuss about StringTokenizer class. Explain with an example.	Remembering	7,8
9	Explain in detail about Random class with an example.	Understanding	7,8
10	What is Scanner class? Explain with an example.	Remembering	7,8
11	Explain in detail Calendar class with an example.	Understanding	7,8
12	What are text input/output file operations? Explain	Remembering	7,8
13	Explain in details about binary input/output file operations with examples.	Understanding	7,8
14	Discuss the concept of Random access file. Also explain its operations.	Remembering	7,8
15	How a file can be managed using file class? Explain.	Understanding	7,8
16	Distinguish between a)InputStream and Reader classes b)OutputStream and Writer Classes	Understanding	7,8
17	Explain in detail about the types of drivers in JDBC.	Understanding	7,8
18	Discuss the process of connecting to database using JDBC.	Creating	7,8
19	Develop a JDBC application for updating data.	Applying	7,8
20	Explain the process of getting/accessing metadata for a resultset.	Understanding	7,8
DAD			
<u> </u>	T – C (Problem Solving and Critical Thinking Questions) What will be the output of the program?	Remembering	7,8
	<pre>package foo; import java.util.Vector; private class MyVector extends Vector { int i = 1; public MyVector() { i = 2; } } public class MyNewVector extends MyVector { public MyNewVector() { i = 4; } public static void main (String args []) { MyVector v = new MyNewVector(); } } </pre>		
2	Analyze the following program and find the output of the program? public class Test { public static void main(String[] args) { System.out.println(Math.min(Double.MIN_VALUE, 0.0d)); } }	Analyzing	7,8

```
Find the output of the program.
                                                                                                 7,8
                                                                           Remembering
import java.util.*;
class I
   public static void main (String[] args)
     Object i = new ArrayList().iterator();
     System.out.print((i instanceof List)+",");
     System.out.print((i instanceof Iterator)+",");
     System.out.print(i instanceof ListIterator);
  }
                                                                             Remember
Compare the output before adding and after adding?
                                                                                                 7,8
import java.util.*;
public class ArrayListExample {
 public static void main(String args[]) {
          ArrayList<String> obj = new ArrayList<String>();
          obj.add("Ajeet");
          obj.add("Harry");
          System.out.println("Currently the array list has following
elements:"+obj);
          obj.add(0, "Rahul");
          obj.add(1, "Justin");
         obj.remove("Chaitanya");
         obj.remove("Harry");
          System.out.println("Current array list is:"+obj);
           obj.remove(1);
          System.out.println("Current array list is:"+obj);
 }
What is the output of the following program
                                                                           Remembering
                                                                                                 7,8
import java.util.*;
public class ArrayListExample
  public static void main(String args[])
          ArrayList<String> a1 = new ArrayList<String>();
           a1.add(1);
           a1.add(2);
           a1.add(3);
           a1.add(4);
               System.out.println("Current array list is:"+a1);
               Integer ia[]= new Integer [a1.size()];
               ia= a1.toArray(ia);
               int sum=0;
               for (int i : ia) sum += i;
               System.out.println("Sum is:"+sum)
```

6	Analyze the program and explain the importance of line 1 and give the output import java.util.StringTokenizer; class Stdemo { Static String in= "title= java : the complete reference" + "author= schildt" + "publisher= Osborne/mcgraw-hill " + "copyright= 2005"; public static void main(String args[]) { String key= st.nextToken(); 1 String val= st.nextToken();	Analyzing	7,8
	System.out.println(key + "\t" + val); } }		
7	What is the output of the below program? import java.io.*; class BRRead { public static void main(String args[]) throws IOException { char c; { BufferedReader br= new BufferedReader(new InputStreamReader (System.in)); System.out.println("enter characters, "q" to quit."); Do { c= (char) br.read(); System.out.println(c); While(c!="q"); } } }	Remembering	7,8
8	Analyze the program and give the output and also explain the importance of hasNext() and next() methods. import java.util.*; class Findlinedemo { public static void main(String args[]) { String s="Name: Tom Age: 28 Id: 77"; Scanner sc= new Scanner(s); sc.findInLine ("Age"); if(sc.hasNext()) Syste.out.println(sc.next()); else Syste.out.println("error"); } }	Analyze	7,8
